I have a sick Sony ICF-2010. I hadn't used it for several years and when I tried it recently, I got stations but the sensitivity didn't seem up to par. I replaced the front end FET to no effect. When I try the SYNC function to lock in a signal, the signal distorts and does not synch.

Any ideas? I was going to offer it on E-Bay but I hate to sell an "as-is"unit that is not working properly.

Well, it's a decent radio for reception. It's about the same size as a
Sony ICF-SW7600GR, but lacks and SSB support or Synchronous lock at all.
Mine had a bum tuning knob, that every 10 steps would go back one the other
direction. There is also no double conversion, and thus it suffers from
images, although you can select from a 450 or 455 intermediate frequency.
The radio is the same as the Grundig/Eton E10, by the way, but with chinese
writing, so if you want you can read that manual off the website
www.grundigradio.com.

Good choice. And I'm sure you'll find it a significant upgrade from
your Panasonic RF-3100. If you're looking to chase the weak DX, then a
JRC receiver is hard to beat.

Too bad most Rechargable D cells are C-cells in D-cell cases, at best. I
have noticed a disturbing trend where AA rechargable NiMH cells have a
higher capacity than the D-cells.

David - Switched or un-switched the Exposed Outer Ring
of the 1/8" Mono Jack used for the Earphone Output is
usually the Radio's Electrical Circuit Ground and is also
the RF Signal Ground.

NOTE - This idea and application is mainly for Radios
that do not have a built-in External Antenna Input that
offers a Grounding "Attachment" Point for the Radio.

iane ~ RHF

Ray Babbitt is an excellent choice to fix any problem pertaining to the
2010. I know there are a couple of guys that get more press than Ray,
but his workmanship, prices, and integrity are surpassed by no one.
Do a Yahoo search within the 2010 group. Let Ray fix and mod your
unit, then forget about selling it. One can't replace a 2010 easily.

MSNBC.com
A Radioactive Dilemma
Wanted: a sensible policy to check Tehran's nuke program
By Michael Hirsh
Newsweek

April 24, 2006 issue - In the minds of some Bush administration officials, the solution to America's new foreign-policy crisis lies with people like "the Larry King of Iran." That's what Ahmad Baharloo's executive producer, Maryam Velgot, calls the ruggedly handsome host of the Persian-language show "Roundtable With You" on Voice of America. Baharloo, an Iranian exile in Washington, will soon be a prime instrument of the administration's new democracy-promotion campaign in Iran. Of the $85 million President George W. Bush has requested from Congress for the campaign, about $50 million will go to expanding Farsi television programs on VOA, and Baharloo is a star performer. Beginning in June, Baharloo's interview-and-call-in show will be beamed into Iranian homes seven days a week instead of just one. The goal: to blanket the repressive, cleric-run state with open dialogue and glad tidings from America. Asked whether any Larry King-type character "even the real one" could do much to engender democratic revolution, Velgot says, "Well, he's more like the old, serious Larry King." She adds that there is much more coming, like a fast-paced news-magazine show with a chic, comely host named Luna Shad that "can be likened to Anderson Cooper's '360'." That will also move from one day a week to seven.
Bush won't call this policy "regime change." And it certainly isn't the kind of regime change we remember from his first term, when he employed a much blunter instrument in Iraq. But it is one of the ways that the administration is groping for a non-military solution to a brutally difficult predicament. Last week Iranian President Mahmoud Ahmadinejad announced that Iran will move its nuclear program to full-scale uranium enrichment and he threw in another ugly threat to Israel for good measure even as U.S. officials lobbied hard for an anti-Iran resolution at the U.N. Security Council. Countering several recent news reports, U.S. officials denied that airstrikes on Iran's nuclear facilities were even close to imminent. But the president pointedly sidestepped questions about whether military contingency planning was underway.
The point of the new hearts-and-minds program, U.S. officials say, is to remind the Iranian people what goodies await them mainly economic prosperity if they drop their nuclear ambitions. Yet outside interference tends to enrage Iranians, who have never forgiven Washington for the CIA-assisted coup that toppled elected Prime Minister Mohammed Mossadegh in 1953. "It's not new," Javad Zarif, Iran's ambassador to the United Nations, says of the American campaign. "They increased their activities in Iran two or three years ago and now instead of a reformist president we have a conservative president. That tells you how successful they were."

Zarif may have a point. Before the Iranian presidential elections last June, Bush issued a statement criticizing the fairness of the process. Even affluent voters who said they hated the Shiite mullahs told a NEWSWEEK reporter in Iran at the time that American arrogance so angered them they decided to vote for Ahmadinejad, the radical candidate. In such an atmosphere, a military attack of any kind would only incite Iranians even more, many U.S. officials concede. There is some evidence the Bush administration may be dabbling in covert action as well. The Iranian regime has been incensed in recent months by a series of attacks by "bandits" along the border, and has accused U.S. and British intelligence agencies of fomenting unrest. U.S. officials insist they have nothing to do with such attacks. And some officials familiar with U.S. intelligence operations say they are unaware of any presidential directive, or "finding," instructing the CIA or other U.S. agencies to conduct covert actions. If true, that means the president is relying, for the moment, on Ahmad Baharloo and his broadcast brigade.

Put up a good antenna and you'll be all set. The 525 takes either a
high impedance wire or a 50 ohm coax feed; actually, you can attach
both and switch between the two. Good dx-ing...

2007. Ten-Tec Service.

Newsgroup: rec.radio.shortwave
Date: 2006-04-20 04:10:14 UTC
From: D Peter Maus <DPeterMaus@worldnet.att.net>
Message-ID: <GQD1g.24075$az4.15094@bgtnsc04-news.ops.worldnet.att.net>
Source record: 71213

After reading some of the horrifying things I'd read here about Ten-Tec service, I decided to experience it for myself.

The backlight on my RX-350 became unstable. Not having a service manual, I called Ten-Tec and spoke with Service, and they gave me, over the phone, the location of the trouble, the identity of the faulty parts, and tricks and techniques to correct the problem. Not bad for a first contact on a radio that's out of warranty.

As helpful as that was, I really wanted to see what the story was in dealing with an actual repair at the factory, so I sent it in anyway.

I got an e-mail on the radio's arrival, a job number, a telephone number to call should I have questions, and an estimate of cost and turnaround time. $83, and 4-6 weeks.

At 4 weeks, I sent an e-mail inquiring about the job, and found that there was already a notice of completion in my mail trash folder, due to some pretty tight spam filtering. The total for the job was $83 and change, including return shipping by FedEx Ground. I could pay by check, money order or credit card. So, when the invoice arrived 48 hours later, I sent them a check. Less than 7 days later the radio arrived, good as new, cleaned of all fingerprints, dust and assorted handling marks, boxed to survive a head-on with a Volvo. It also looks like they touched up alignment.

Total turnaround: 5 weeks.

Worth noting, when you hear dissatisfied users, that there are satisfactory outcomes.

< Snip >

Most ham voice communications are SSB where you would not use sync
detection. A few ham operators use AM mode and it would help there I
guess but the percentage using AM is small by comparison.

I don't think it likely that you would find this type in a portable SW
radio. This looks like something that belongs in a cordless phone.

It's possible it could though.

The geomagnetic field was unsettled last weekend so give it another go
this weekend. You should do well with 17735 and 15315 on the weekend at
19:00 to 21:00 UTC. They don't seem to be broadcasting on 17660 these
days though the schedule says they are I don't get them on it at all.
Before the schedule change last fall they were very good on 17660.

How about 9700 KHz in the 06:00 to 08:00 UTC time frame? That was a good
frequency for me.

I am looking for portable radio with following specs:

-suitable for air travel (max.1 kg)
-FM/AM/SW and AIR-band
-RDS
-(signal strenght meter)
-sounds near like Tivoli Audio Model One
-world time

Those specs are fullfilled with my Grundig Satellit 700 except the
weight(2kg with batteries).
Satellit can be adjusted below and over the normal FM-band with factory
trick.

Weird! I haven't heard of something like this before. I doubt that
any postal person would steal a QSL card. More likely, it was
inspected for some reason and not all of the contents were put back in
the envelope.

The mail I recently got from VOR included a schedule that was only
valid for 2 more days (heh) and a QSL card. If you email them and say
that the envelope didn't include a QSL card maybe they will just send
it again for you.

You can tell by the weight of a rechargable D-cell if it's really a 'C'
or 'AA' inside. The *real* D-cells are much heavier. You can still buy
real rechargable D-cells but they're expensive. I have some Panasonic
D-cell NiCd's that cost about $12.00 each. They have a capacity of
5000-mah. They're about five years old and still going strong.

SSB (ECSS) is not the same as a good selectable sideband sync' detector
for AM program listening. You get the benefit of low distortion and
adjacent channel rejection without having to use a narrow IF filter.

I listen to music on Radio Australia and New Zealand frequently. It's
one of the reasons I particularly like those two stations.

Because ham's use mostly SSB on the HF bands. A sync' detector is not
useful for that mode.

Ray has fixed and tupgraded two ICF-2010 radios for me and he is super.
I bought a used SW100S from Noel and he was great to deal with.
Either would be a great choice.

There are so many things to love about the ICF-2010, I don't think you
can go wrong fixing it. I use mine almost exclusively for AM/FM
broadcast listening, but it is nice to have the air and sw bands
available. It really shines in sw broadcast.

For ham listening, I prefer hf tranceivers or the Eton E1 or Drake
R8B.

My two cents plus a couple pennies too many.

Sure, I realize and appreciate that. But as I said earlier, these transceivers have a general coverage receiver section...it's not as though amateur communications is of any account, for instance, in the MW BCB or the int'l SW BCBs. Through these online fora, it's apparent that a significant number of radio amateurs have an interest in the reception of signals in these bands. Moreover, how much of a further investment would be required to give a transceiver a greater edge in this area? From what I can see, this might be done simply with the addition of AM Sync detector circuitry and the expansion of the DSP variable bandwidth control from the SSB range on up to 6.0 kHz or so. The technology already there, so...

Yeah, the guy I spoke with was a hoot. Clearly a ham who loved the hobby, his profession, and enjoyed talking to other radio hobbycraft practitioners.

I did some digging before I bought the Ten-Tec and based on the recommmendation of a former member of this newsgroup--ex-VOA and an Extra class ham at that--I decided to make some calls to Ten-Tec about product, service, ongoing support and whether Dolly interferes with reception above 15 Mhz. I found them to be quite well informed, eager to assist, and in general good humor. Not unlike the ICOM techs at Bellevue.

It was a no brainer. Bought the radio and have had nothing but pleasant surprises since.

The 525 audio supposedly has a little distortion, although it's never
bothered me.

The 525's stock filters are set at 6 khz and 3 khz. You can also
bypass the filters with the AUX switch, which gives about a 12 khz
bandwidth, and full-bodied audio for AM stations.

********** REPLY SEPARATOR **********

I find it fascinating to see all the personal attacks against Skirt Chaser, but not one poster says his conclusions are wrong.

Reminds me of some years ago when Dan Quayle attacked Murphy Brown for portraying a decadent lifestyle. He got crap from all over the spectrum, but not one attacker said his conclusions were wrong either.

Food for thought.

Bill, W6WRT

See if you can pick up Vietnam on your Shortwave Radio.Their music is cool.I used to tote a shirtpocket AM transistor and listen to some Vietnamese music in 1964 when I was in Vietnam.Or,you might find some Vietnamese music on internet radio. www.radio-locator.com There is a radio station (Cymru'r Byd) in Wales (Cardiff or Swansea) I sometimes listen to.They play some nice music on the radio.I think from midnight to about 6:00 AM or 7:00 AM their time zone,they are off the air.

A general coverage transceiver would certainly do the job and if you
have a license it could do double duty. My experience has been that
high end receivers that were designed just for HF reception have some
added features that might make the job of listening to signals a bit
easier though. That is my sense with the R-5000 at least.

I have been using my Yaesu FT-840 for over 7 years for SWL listening. I have added the 6 khz filter and also use it with an old Info-Tech 600 demodulator for SELCAL and RTTY. works great.

Maybe the return envelope wasn't closed properly at VOR. Try enclosing
an envelope with peel-back adhesive.

I built one of their little QRP kits. They gave me good advice over
the phone -- never had to wait -- they came right on. They also did a
certain amount of email consultation on the basic design of the kit,
in regard to the power connections, which I had hooked up backwards.
They even "repaired" it at a reasonable price when I couldn't get the
VXO to oscillate. So I'd recommend 'em, service-wise.

Your comments indicate that have an unusual interest in the homosexual
lifestyle. By appearing to be virulently anti-homosexual you come
across as trying too hard to convince us that you are heterosexual.
Possibly you need to convince yourself first that you don't have
homosexual tendencies before trying so hard to convince others.

Really, it's ok if you are. Just accept yourself as you are and
everything will be fine - eventually.

well you facts are in error

I said his conclusions were wrong

The ARRL had no real choice in allowing LARC to advertise the cloesets
it had to a choice was a long and expensive legal battle that it would
likely lose

as to the rest I refarined from comenting on the posters obvious sexaul
issues becaus ethey were
A) obvious and
B) simple the run of a flase premises which by the GIGO meant they
rest was garbage

FWIW the DE1103 has a sleep timer, and like you I find it useful for
those bedtime dx sessions.

I've never bent or broken an antenna, but I've seen enough of them to
figure out the solution. Just start from the bottom largest segment
and pull down. Don't push down from the top smaller segments.

About four years ago in the month of July,two guys with the City of Jackson Water Department were working on (or pretending to be working on) the water meter in the front yard next door to me.(I wish I had had some film for my camera) When they got through,they slowly moved their pickup truck up and down the street I live on and they peeked into every single one of the snail mail boxes on the street I live on,including mine too.

y'all dont believe the post office will and does ''inspect'' our snail mail? Oh Yes they do! Twice it has happened to me.For instance I once ordered some paper back books,HARRP and Underground Bases, (www.sauderzone.com) two books from a book company.When my books got here,there was what looked just like somebody had poked a finger in the top right corner of the shipping envelope and ''checked out'' my books and there was a lot of scotch tape covering the hole and all along the top of the envelope.I still have that envelope around here somehere,I know I didn't throw it away.

I know of no radio that meets these criteria. Perhaps Sangean's ATS-909 will come closest to meeting your requirements. It's a tad less than a kilo in weight. Has FM/AM/SW & RDS, but no Air band. It has a signal strength indicator, and a clock that is visible even when the radio is in use. The audio is fairly decent on this set, but I don't think you're going to find any compact SW portable that has audio quality approaching that of the Tivoli.

I had an ATS-909, but I didn't keep it. I'd go with the Sony ICF-SW7600GR. The Sony, however, does not have RDS, nor does it have a useful signal strength meter (the word "Tune" is displayed when a signal's strength is above a certain threshhold). The audio is not quite as pleasant as on the Sangean, and it's certainly nowhere in the realm of a Tivoli Model One. The clock and frequency display share the same space, so you can't view them simultaneously. The Sony does have synchronous detection circuitry which is very nice in reducing adjacent channel interference on SW and in alleviating some of the fading effects that occur on shortwave. No air band on this one, either.

Skirt Chaser,

So convinced of your position, you didn't post with a real name. One thing we all can agree on: The ARRL did not hide its political position.

I want to go on record as embracing the ARRL's move, a reason that I just may join after all these years. I guess I first need to identify myself as "normal" heterosexual, although sexual identity ought not be relevant to one's standing or reputation in life.

The terms of conduct you use are appalling, homphobic imaginationl. How can youi pre-suppose what two consenting adults do privately? Do we pre-suppose what heterosexuals do? Of course not, realizing sexuality is unique.

The only act that is obviuos becomes so by the birth of children, otherwise sexuality is a private matter. And on what basis do you connect children with homosexuality, which abuses pale in comparison to heterosexual abuses with children.

A compelling example, by no means alone, is the recent spate of female teacher abuses of male minors. To draw the example further, the reality of this teacher abuse by no means speaks for female teachers in general, any more than homosexuality equates to abuse of children.

Your post, to me, seems so rife with homophobia and prejudice that you seem mentally unbalanced. Of course, I could be wrong and I could be the unbalanced one. In any case, I wish you well and hope you will begin to feel the integrity of your words suffcient that you identify your posts by real name and call.

Do a search for Tivoli Radios.I think Tivoli does make some radios that can also be used as a speaker.Of course there are Bose speakers too,if you want to pay a lot of money.Why not check out some auto junk yards for high priced cars radio speakers? You could find or build a wooden box for the speaker's cabinet.

Junius makes a good point about battery consumption. The Degen 1101
is very easy on batteries but its much more sophisticated brother the
1103 wades through them. With all the bells and whistles on this
radio it may very well suck back a lot of juice.

Degen is entering the market for an entirely different class of radio, if this '1108 is to be all that the internet rumor hypes it up to be. It seems to me that with this radio the incentive to order directly from Guangdong will be considerably eroded:
* the unit will be larger and will weigh more, so shipping from China would be higher;
* a feature-packed radio would understandably cost a lot more than the Degens we've seen so far, so wouldn't you prefer a warranty on that (i.e. buy Kaito) and not have to deal with shipping back to China if something goes wrong?
* there is to be a design for the Chinese domestic market and another for export...I wonder if there will be any differences beyond the merely cosmetic?

How is Kaito on dealing with repair/warranty issues? Has anyone ever had a Kaito repaired under warranty? Seems like with any real problems, it'd be cheaper for them to just send out a new one w/the models currently available...although I guess that wouldn't be the case with an '1108, if it's of the level of sophistication that seems to be expected.

Yes, if it has 2 speakers to drive then 6 d cells may be needed. Still I'm amazed at how well Degen did with the other radio I'm familiar with. The DE1103 is surprisingly easy on rechargable NIMH batteries considering the good loud audio that comes from the speaker and headphones. It would be even longer lived on regular alkalines I'm sure. Degen may be able to wring some good loud audio from the 1108 and not eat through batteries too fast.

Resonance is one of many things that goes into receiving signals,
but when you come right down to it the receiver is nothing more
than a device which processes the voltage (or current) fed it from
an antenna. You use it to select one of many signals (using
resonance), amplify the heck out of it and extract the information
from the result.

No doubt it was n8wwm and kb9rqz, but what does this have to do with
rec.radio.cb?
Quit crossposting.

>The ARRL
> wanted us to embrace a sick perverted lifestyle and be one big happy
> family. To me, it was the spark that signaled the death of a once proud
> organization, and it turned liberal.
>

So quit supporting the ARRL and encourage others to do the same.

> Now the queers have all but taken over, they're like the military wing of
> the Democratic party, and always in your face.

So you are claiming the majority of hams are gay? I'm sure there are many
that would disagree with your obvious troll post.

>It's not even safe to take
> your kids to Easter egg hunts anymore. I know you're all going to disagree
> with me, but a man touching and sucking on another man's cock and fucking
> his ass just ain't right.

I agree, and go a step further by saying that it is not right for you to be
this graphic about it.
It makes me wonder what you sit around thinking of all day long.

> The ARRL promoted this, now look what happened
> to our radio groups.

And you are promoting it with your crossposting of this graphic troll trash.

lying as normal "dr" death I see

but to answer your question the concention with rec.radio.cb is that
the origainl poster posits that ARRL is responible for the near
constand of Homosexaul bashing in Radio Newsgruops such CB and to
another poster in the read Shortwave for that matter.

that the explanation is Bull not with standing is a on topic thread to
extent it sparks a discussion of why do so many people in the Radio
NG's choose to make homosexauly based attacks

as to the real reason why the radios NG has gotten into the gay bash
state they have is someothing of mystery to me, since the ARRL
obviously lacks such power

Ohm's Law. When you put a voltage across an impedance, current flows.
The voltage induced in a typical antenna is with respect to ground.

So, radio doesn't work in outer space? If I had a six transistor
radio 50 miles up I couldn't hear Limbaugh?

You know, I've wondered about that, too. The closest to explaining
that I've conjured is that the electromagnetic field works up
there, but I can't imagine how the electrostatic field from the
transmitting antenna could work on a space antenna. But antenna
design has always been black magic to me.

2112. Re: Modified 1/8" Mono Plug for a 'portable' Radio's Ground Connection

Newsgroup: rec.radio.shortwave
Date: 2006-04-20 23:17:57 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145575077.206389.94830@v46g2000cwv.googlegroups.com>
Source record: 71417

David - So are you claiming that 'only' Resonant Current
Flows to ground ? ;-) ~ RHF

FWIW - There is a lot of Dipole Antennas out there
free floating above ground that must not be working :o)

IIRC - The Antenna Input has a characteristic impedance
50, 75, 300, or 500 Ohms. Subsequent to that the internal
circuity of the Radio can be Resonated to Select and
Amplify an RF Signal and then process it into an Audio
Sound that we can Hear.

yes it is that simple ~ RHF

2113. Wanted: Super Pro, Super Pro SSB adapter

Newsgroup: rec.radio.shortwave
Date: 2006-04-20 23:23:20 UTC
From: Avery W3AVE <acomarow@usnews.com>
Message-ID: <1145575400.911239.21910@u72g2000cwu.googlegroups.com>
Source record: 71419

I'm looking for a Hammarlund SP-600-JX-21A, the final run of the Super Pro and the only version with a product detector and selectable sidebands. Failing that, I'd be very interested in an SPC-10, the SSB adapter Hammarlund produced for the SP-600.

Please email if you have one of these, or have a line on one. I'd consider offering a very clean Hammarlund HQ-215, the company's only solid-state ham receiver and rather hard to find, in partial trade.

Thanks for your help.

Avery W3AVE
Potomac, Md.

2114. Re: Modified 1/8" Mono Plug for a 'portable' Radio's Ground Connection

Newsgroup: rec.radio.shortwave
Date: 2006-04-20 23:25:15 UTC
From: RHF <rhf-newsgroups@pacbell.net>

Source record: 71422

JHR,

HOW TO - REMOVE THE TIP OF THE 1/8" MONO-PLUG :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9133
Use two Pairs of Pliers to carefully remove the End-Tip of the body
of the 1/8" Mono Plug.
Oops - Some people just use a Pair-of-Diks and snip-it-off :-(
Next - Ever-so-Gently -squeeze- the Barrel and deform it 'just enough'
(into an Oval) to make it a "Pinch-Fit" for the 1/8" Jack.

FWIW - If you only have a SO-239 Jack on the back of your Radio
or other equipment; and want to connect a simple Insulated Wire
feed-in-line form a classic LongWire {Random Wire} Antenna.
Then a {1/8"?} Banana Plug will 'fit into' the Center Female Pin of
the SO-239 Jack. -Note- Sometimes you have to gently spread the
four sections of the Banana Plug Tip to get a Snug-Fit with the
Center Female Pin of the SO-239 Jack.

Back in the Good Old Days on the Farm the Answer . . .
would be Baling Wire :o)
http://en.wikipedia.org/wiki/Baling_wire

The Modern Day Urban Answers are now things like :
a Paper Clip, a Rubber Band and some Duck Tape :o)
http://tinyurl.com/mlpty
http://www.texasescapes.com/DelbertTrew/BalingWire-DuctTape-DrywallScrews-Caulking.htm

yes it is that simple - iane ~ RHF

Hello:

I have a 75 foot run of 50 ohm coax for a receive-only antenna. (30 Mhz on down)a.

Need another ten feet or so.

a. Any "meaningful loss" if I use a 75 coax jumper rather than a 50 ohm one ?

b. Also, if I use one of those coax T adapters to connect the pieces as I have a spare one: the kind with a perpendicular male and two in line females in one small "connector piece", any problem with the unused "port" regarding reflections or discontinuity losses ? (again, for receive only)

e.g., should I use termination there, or just forget about it and leave the unused spigot alone ?

Thanks,
b.

Basic Nicola Tesla. Resonance. Has nothing to do with ground or waves travelling through space. An antenna sets up a field by resonating at the frequency of a connected generator. An antenna samples energy from the field in a similar manner and this can be detected.

EM waves, radio or light, do not depend on a medium to propagate.

Air has a dielectric value of 1 and space or vacuum is about the same.
This means that in space/vacuum/air EM waves propagate at the same speed
and the impedance of these mediums are about the same.

<http://members.gcronline.com/cbrauda/0007.htm>

We have drifted a long way from the topic.

But nonresonant antennas work quite well, probably even in space.
Resonant antennas work better, but your explanation doesn't account
for the long-wire antenna that works on 19M and 49M too.

I've granted that the electromagnetic field works a treat out there.
But electrostatic fields rely on charge in a medium, no?

> Air has a dielectric value of 1 and space or vacuum is about the same.

The dielectric value can't have anything to do with EM waves, just
the electrostatic ones.

No they do not rely on a charge in the medium. Electric fields exist
from a charge. If that charge is in a medium other then vacuum then it
can slow and compress the volume of the field.

> > Air has a dielectric value of 1 and space or vacuum is about the same.

Yes it does affect EM waves. The dielectric value of the medium
determines the speed of propagation.

It's in the field and absorbing energy. The lack of resonance
requires more amplification.

BM,

Like most suggestions - This is not a perfect suggestion
that works for everyone all the time.

This is simply one of those suggestions that if you try it;
it just may work for you; this time and the next time it
may not do anything or even make things worse.

The main idea is to see 'if' by adding a Ground to the
un-grounded Radio {Grounding the RF Signal Ground
Side of the Radio's internal circuitry}

So starting with a low cost 'portable' AM / FM Shortwave
Radio with a Plastic Case that does not have an External
Antenna Input or an Exposed Ground Connection.

FOUR TRICKS TO TRY FOR BETTER
AM {MEDIUM WAVE} RECEPTION :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9137

1. Touch a Finger Tip to the Tip of the Whip Antenna
- - - Does the Radio's Reception Improve or get Noiser ?
Try this on the AM, FM and Shortwave Bands

2. Touch a Finger Tip to Exposed Ring of Earphone Jack.
- - - Does the Radio's Reception Improve or get Noiser ?
Try this on the AM, FM and Shortwave Bands

3. Take a 15-20 Foot piece of Insulated Wire and strip-off
an Inch of Insulation from one end and attach the Wire to the
Collapsed Whip Antenna. Route the Wire around the Room.
- - - Does the Radio's Reception Improve or get Noiser ?
Try this on the AM, FM and Shortwave Bands

Finally we get to the root of this suggestion . . . # 4

4. Take a 3-6 Foot piece of Insulated Wire and strip-off
an Inch of Insulation from both ends and attach one end
to a ground within the room (Cold Water Pipe?). Make
sure that the Radio's Whip Antenna is fully extended.
Next "Touch" this Wire to the Exposed Ring of the
Radio's Earphone Jack.
- - - Does the Radio's Reception Improve or get Noiser ?
Try this on the AM, FM and Shortwave Bands
HEY - Even try Touching this Ground Wire to the
Radio's Collapsed Whip Antenna :o)

- - - Does the Radio's Reception Improve or get Noiser ?

"IF" - When you "Touch" the Wire to the Exposed Ring
of the Earphone Jack the Radio's Reception Improves.
Then Modify an 1/8" Mono-Plug to put into the Earphone
Jack to connect a Ground to the Radio for Improved
Reception all the time {most of the time}.

All righty then, I ask why should you care about picking up the ground side? Will this make the reception less noisy? Is it worth the trouble?

Theoretically it should help but like all things pertaining to antennas it will depend on the situation at hand.

If you connect the radio ground to the other half of a dipole or other Hertzian type antenna it should reduce common mode pickup, which is the main mode of local noise pickup.

I'll explain why this is if anyone cares to know.

I've had three Kaito/Degen models, and none of them have needed repair. But
if one needed repair, I'd probably just spring for a new one, rather than
send the busted one back to China.

Myself, I think the Sony 7600GR is way over rated. If I had it to do over
again, I would not have bought it.
The antenna broke off the Sony right after I got it. It's the only portable
I ever bought that happenned to.

My DX-398 is the workhorse of all my portables.
I am thiniking about buying another one, because this one has a lot of hours
on it and it showing some wear.

If the antenna is amplified, you can play all sorts of games down
stream. If not, I would just, as Spike Lee says, "do the right thing."

Since the length of the open end of the T is very short, it probably
won't matter much. A common trick is to make a notch filter by
inserting a T then putting an unterminated coax on the T that is a
quarter wave length (I think) of the frequency you want to notch.

Message-ID: <1145603070.560948.142400@g10g2000cwb.googlegroups.com>
Source record: 71255

Robert 11,

Think about the Mechanics of it . . .

First you have an Antenna with a 50 Ohm Connector

Next you have a Coax Cable with a 50 Ohm Connector
on both ends.

Then you have a Radio/Receiver with a 50 Ohm Connector.

Note - 50 Ohm Connector = SO-239 Jack or PL-259 Plug.

Now when you go from the 50 Ohm Coax Cables (PL-259)
Plug to the 75 Ohm "T" Spliter {"F" Connector} ; you will
need an Adapter for SO-239 to "F".

Again when you go from the 75 Ohm Coax Cable's ("F")
Plug to the 50 Ohm (SO-239) Jack on the Radio ; you will
need an Adapter for "F" to SO-239.

That is a lot of Hardware Working and a lot of Electrical
Connections requiring a Solid Mechanical Connection.

Basic {Good} Antenna Building Practice :
Never introduce a Mechanical Connection into an
Antenna feed-in-line unless it is needed "By-Design".

The One Piece Solution :
My suggestion would be to buy the two Adapters for
PL-259 Plug to "F" and a new longer piece of RG6
Quad-Shield Coax Cable. Use one Adapter at the
Antenna and Coax Cable Junction and the other
Adapter at the Coax Cable and Radio Junction.
With one long piece of Coax Cable between the
Antenna and the Radio.

IMHO - RG6 (RG-6) Quad-Shield Coax Cable is the
Best Value and most efficient and readily available
feed-in-line for a Shortwave Listener to use today.

hope this helps - iane ~ RHF

< Snip >

A portable using a whip antenna or using a single wire extension is a
Marconi type, which is a common mode voltage antenna. Locally generated
noise is picked up best by this type of antenna.

The whip or extension wire picks up common mode energy, generated nearby
or from a distance, which travels across the radio input impedance into
the radio chassis return. If you hold the radio or if it is plugged into
an AC converter supply then you and the mains become part of the RF
return. The radio chassis return, you or the mains look like a low
impedance path for the RF to go into so the circuit is the one element
generating a voltage with the RF current across the radios input
impedance into a low impedance ground or return.

This is contrasted with a Hertzian balanced antenna where the RF current
travels from one element to the other through the radios input impedance.

Here locally generated noise tends to couple to both elements more or
less equally so a potential voltage difference does not appear across
the radios input impedance for the local noise source energy. However, a
distant EM waves at 1/2 wavelength of the dipole or smaller will
generate a potential voltage between the two elements, which causes RF
current to flow through the radios input impedance.

This action between local and distant energy on a Hertzian type antenna
is situationally dependent but should show a marked improvement over a
Marconi type antenna for distant signal to local noise. This improvement
is best shown with the portable on batteries so the antenna arrangement

is best balanced. Using a AC supply will have a tendency to unbalance
the Hertzian antenna.

Extending the 50-ohm coax with another ten feet of 75-ohm won't be a problem for receive-only on HF. However you should use a 75-ohm inline barrel F-connector (female to female)for joining the two coaxes instead of the 'T' adapter or splitter. The splitter will some signal loss from both outputs regardless if one of them is not used. You can get the barrel connector at Radio Shack or most any place that sells TV coax hardware.

Although it doesn't cost that much these days to extend the range of an HF-transceiver for general coverage, it could be harder to come up with a good sync' detector that doesn't infringe on another manufacturers design. Look what happened to the R-75. I'm sure Icom knows how to design a good sync' detector but there may have been legal limitations to what they could implement. This could be the main reason the manufacturers are not interested in adding a sync' detector to a general coverage HF-transceiver. I also don't think it's really so "apparent that a significant number of radio amateurs have an interest" in listening to international shortwave broadcasts. It's been my experience that few do.

I got the high capacity Panasonic D-cells primarily for a bicycle light system. It uses five of them in series for 6-volts. They will power a ten watt headlight for about three hours. In the off season I use them for other things.

2153. Re: Drake R8 Vs Eton E1 - MW

I own the radio's in question E1 and R8.....Noticably better with the Eton?, probably not. The Eton is probably as sensitive as the R8 but will give you selectable sideband sync reception and will hold sync better than the R8....however, in 90% of cases, the R8 will do just fine.

I also have owned the AOR 7030 but sold it off....beautiful radio but the operator interface is totally unfriendly, never was able to warm up to all the intense button-pushing just to get around function changes, memories, etc.

Good luck and DX

It's an active antenna. Not a ''Marconi''. A Marconi is a ceneter
fed half-wave vertical, where the ground forms the bottom half of the
antenna.

Did I miss something in the post?
I see no reference to F connectors in the original post. or to a signal
splitter.
Also note ther is no such thing as a 50 Ohm or 75 Ohm UHF connector
(SO-239/PL-259) or a 75 Ohm F connector. Both of these connectors are
non-constant impedance connectors. Examples of constant impedance connectors
are N, BNC, TNC. SMA, SMB, SMC HN, etc.
If you use RG-59/U for your 75 Ohm section, no adapters are necessary. Just
use a UG-176 reducer in your PL-259's instead of the UG-175 reducer

Use your UHF tee Bob and put a vinyl cap over the male port. Losses at HF
are in the -0.01dB/connector region for properly installed junctions. Just
waterproof them.

Note that the notches made with a single stub are rather broad and even more
important is the fact that it will also notch 3X, 5X, 7X etc the
fundamental.
So, if one places a 1/4 wave open stub at 1.5 MHz to reduce an AM station,
notches will also occur at 4.5MHz, 7.5MHz, 10.5MHz, etc. i.e. a real mess.

That's an interesting point, but I think Drake is licensing their sync detector and I suppose other manufacturers would also license theirs, if they think it wouldn't take away too many of their own radio sales. That's assuming that's there's still much worth licensing. Most of those patents must have been around a while.

Chip fabrication is another issue. ASICs are economical only in large runs. Motorola used sync detection in it's AM stereo chipset, and I'd guess adapting it to a stand alone sync detector would be easy enough. They must have not thought there was enough buyers to bother with.

Speaking only as an occasional hamfest attendee, I've noticed little interst there concerning international broadcasting even though these guys are very much SW radio hobbyists.

Look, I started all this with my post about my Gay chit-chat on the radio and I want to thank my good friend G.T. Tyson for defending our cause. I know first hand that he enjoys the Gay lifestyle and is a "Fudgepacker" of extrodinary ability, or at least Sparky says he is. He has done a bang-up job of keeping these savages at bay. You are so butch G.T. you get me so hot just thinking about you.

Thank you G.T. for defending all Gays against this brutish person who has such a potty mouth. I know that G.T. likes to do nasty things with his mouth, but that makes him so qualified to be on this thread. If it weren't for G.T. the heterosexuals would have driven all of us gay folks off the newsgroup.

G.T. has proven that he is a bend-over-the-table kind of guy and has done a spectacular job of taking on these brutes. Just because G.T. knows everything about our Gay lifestyle doesn't mean he has been to jail. He just pays attention to detail.

G.T. Tyson will be the pivot man at our next "jerk" if you get my meaning. He is such a savage and a proud member of our Gay chit-chat group here on this newsgroup and will be leading the opening hand-job at our next meeting, here in Central Minnesota, when I get back from my Truck Driving job.

Ta-Ta

As an E1 owner and as one who owned an R8 for some 4 years ('91 to '95), here's my take on it:

Unless you plan to use the portability of the Eton to get the radio out of some noisy indoor environment that is preventing decent reception on your Drake, I wouldn't expect the E1 to offer you noticeably better MW reception. And the antenna you're using doesn't really lend itself to portable applications.

While the Eton very nicely employs synchronous selectable sideband (as in the Drake R8B), the Drake R8's overall performance is going to be superior to that of the Eton E1.

For me, the E1 has become a favorite for portable applications. I've come across no other portable that comes as close as the E1 does in offering performance that approaches tabletop receiver quality.

Which is why the battery eliminator jack (coaxial power socket) may be
a better bet. If it's hooked up so that the center pin is ground,
you may be able to get a crimp on terminal (as used in a Molex connector
or RS-232 plug) that fits on the center pin without activating the
disconnect switch (that's pushed by the outer barrel). A bit of shrink
tubing is recommended to keep from shorting the two contacts. (There's
no disconnect switch on an FR-200, so I just use a (size N?) plug from
Radio Shack).

On the picture, you'll see 7 connections for the cables, oe at the
bottom (7), 6 at the top of the C. How do I need to connect the cables
to have the maximum out of my AM/SW loop antenna ??

http://users.fulladsl.be/spb13810/amloop/tunablec.jpg

I would like to know what I can do with screws A, B, C and D, and of
course, where to connect the cable ends ...

I am making one loop with these tools:
these are the picts:
http://users.fulladsl.be/spb13810/amloop/loop83cm.jpg

the loop, diameter = 83 cm.

http://users.fulladsl.be/spb13810/amloop/loopbottom.jpg
The bottom, a plastic case 11 x 18 cm.

http://users.fulladsl.be/spb13810/amloop/loopbottom2.jpg
The plastic screws that fit the hulahoop.

I will mount the C inside the box, so I'll have no cables outside ...

Thanks,
Marc

Marc,

That's a fine picture of a variable capacitor, but how are we supposed to know how the connections inside are made, or what the capacitance values are? You may be able to tell if you inspect it carefully from the outside. Even if I have one that _looks_ similar (which I may well have) I would not rely on its having the same connections or capacitance values as yours.

Have you done any analysis of the loop to see what capacitance you need to tune it to the frequencies you care about? Reg Edwards has on his website a program that's useful for analyzing loop antennas. I believe it's only set up for square loops, but if you enter side lengths to give the same loop area as you have, you should get quite close to the same performance. You may find it's helpful to use a larger cross-section wire in the hula-hoop, for lower resistance.

How will you tune the antenna to different frequencies if the capacitor is sealed in the box? Will you provide a hole for adjustment? How will you feed the antenna output to the receiver? What frequency range do you hope to cover?

I fear there are more questions than answers...but questions are good if they get you thinking about the whole situation before you put a lot of work into something that may not do what you expect or what you want.

Cheers,
Tom

You will need a VOM to check, but it appears that numbers 1, 3, 4, 6,
and 7 go to the frame (stator). Screws A, B, C, and D look like
trimmers, not wire attachments (that is, they are small variable caps
in parallel to the main caps).

Numbers 2 and 5 appear to be the main capacitor connections with
reference to the frame. This looks like an old AM tuning component
for which you would have two Caps. One for tuning the front end, the
other for the local oscillator, and the trim caps take care of both
matching the antenna, and keeping the IF tracking between the two
(usually adjusted at the high end of the band). The two main Caps
also have different maximums (because they tune over different ranges
of frequencies).

None of this is of any consequence to you for your project, however.
You need only confirm my guess of the frame connections. If that
bears out, tie them all together, or use just one and ignore the rest.
This is one half of your project's Cap. If 2 and 5 show no continuity
to anything else (except the screw heads, perhaps), then that confirms
their status as being the rotor half of the variable Cap. Tie them
together for the other half of your project Cap.

If there is any variation in testing with the VOM for continuity, you
may have a split frame. Visual inspection should reveal two
assemblies that would be very similar in construction. Take hints
from discussion above to reduce the complexity of all the leads.

>
I am not sure how to connect the wires to the loop, but they go to the tabs
that are numbered.
The screws go to 4 small trimmer capacitors for adjustments. Usually that
kind of capacitor comes out of an AM/FM radio and the capacitors are for
fine adjustments of the ranges. One for the frequency of the oscillator and
one for the tuning for each band. They mostly affect the high end of the
band as they are small in compairison to the main capacitor. The are hooked
internally to the main capacitors the shaft adjusts.
If you look close you will see the half round plate turn as you turn the
screw. A coil is usually adjust for the low end of the band. You go back
and forth from the low end , adjusting the coil and to the high end
adjusting the screw for the best tracking across the band. The oscillator
for the frequency readout and the tuning for maximum signal.

The K7RA Solar Update

SEATTLE, WA, Apr 21, 2006--Geomagnetic activity was higher over the past week, with the average daily planetary A index rising over six points to 18. The most active days were Friday and Saturday, April 14 and 15, when the planetary A index was 58 and 29. All this and auroras too were caused by a stiff solar wind meeting an interplanetary magnetic field pointing south, making Earth vulnerable.

Otherwise, geomagnetic activity has been low and should stay that way. Sunspot numbers and solar flux should rise gradually, reaching a peak around April 29 through May 3.

Predicted planetary A index for April 21-25 is 8, 8, 10, 8 and 8. Geophysical Institute Prague predicts quiet to unsettled conditions for April 21, unsettled conditions April 22-23, quiet to unsettled April 24-25, and quiet conditions April 26-27.

For this week's report we were missing solar flux data for April 18. For some reason the report from observatory in Penticton, British Columbia did not show any noon data on that date.

So we averaged the morning (75.4 at 1700Z) and afternoon (75.8 at 2300Z) readings with the solar flux from NOAA (74) and came up with 75.1. At Penticton they measure the 10.7 cm solar flux three times per day, at 1700Z, 2000Z and 2300Z, but it is only the local noon reading at 2000Z that gets reported as the official flux value for the day.

Several hams reported interesting or unusual propagation recently. Grant Hollands, VA7GO of
Victoria, British Columbia (on Vancouver Island) reports that last week (April 12) he was sitting
on a bench on Mt. Tolmie (a park in Victoria) running 2.5 watts into a home made whip. After
sunset around 0300z he heard a strong signal from W5QG in Texas on 14.21 MHz and gave
him a call. W5QG gave him a 4x6 signal report. Then he worked ZK1JD at South Solomon
Islands, who gave him a 3x4 report. Well, maybe none of that is unusual, but it is nice to know
that running a couple of watts from a park bench using a whip antenna does allow you to make
some contacts. Grant said that in February 2005 on 6 meter SSB using 2.5 watts and a

handheld he worked Hay River in the Northwest Territories. Hay River is about 60.8 degrees
north latitude, 115.8 degrees west longitude. He notes that so far this year he hasn't worked any
6 meter QRP DX.

Mike Giddings, G3XLB writes that even when the geomagnetic conditions were acting up
recently, he still made contacts over long distances. Mike is in London, and says that he couldn't
hear any North American stations on April 14, but worked Asia, Malaysia, Cambodia and
Indonesia with reports over S9. Yet recently when the K index was low, conditions seemed
worse.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for April 13 through 19 were 69, 62, 45, 45, 48, 46 and 38 with a mean of
50.4. 10.7 cm flux was 80, 78.9, 78.4, 76.5, 77.9, 75.1, and 75.8, with a mean of 77.5. Estimated
planetary A indices were 13, 58, 29, 10, 6, 6 and 4 with a mean of 18. Estimated mid-latitude A
indices were 9, 32, 18, 8, 4, 5 and 2, with a mean of 11.1.

I admit to never having used either model, but from reviews and such, the R8 is supposed to be great for DXing both shortwave and medium wave. Perhaps improving your antenna would be the better route to go. The AOR is supposed to be a good loop, but perhaps you could try an outdoor antenna to improve reception?

Dear DeWayne,

Let me make a statement that you (and all here) should seriously consider. NO shortwave radio with portable characteristics will match the performance of a tabletop shortwave receiver, all other things being equal.

While as RHF noted I am partial to the AOR AR7030 Plus (properly configured) and, as I operate the set mostly via the RxWINGS computer-control program and therefore have none of the complaints of the person who does not like the AR7030's operating procedure (which is, in fact, very easy to learn and use - I myself do operate the set from its control panel every once in a while), the fact is that your Drake R8 is very close in performance to the AOR and should be superior in reception quality to the Eton E1, Grundig Satellit 800 (and yes I own one of these too) or any other portable radio.

If you have a "weak point" (and I use this term carefully) in your system, it is the antenna, good as the AOR LA-380 is according to all reviews I have read. You might want to consider the Quantum Loop v.2 < http://www.radiointel.com/review-qloop.htm > for DXing on the MWs. While I have no personal experience with it, Jay Allen is a respected reviewer. If a Wellbrook Loop or an outside wire antenna is out of the question for you, this might be an improvement over the AOR LA-380 on MW. You would, of course, have to carefully research this one, though.

In short, I do not believe you need another radio; certainly, the Drake R8 you have, assuming it is working properly, should be excellent for MW DXing. The antenna is the key here - remember the antenna is always more important than the radio.

As always, the above represents my opinions only. I hope they were of some help to you.

Best,

Joe

P.S. Remember, I can handle things. I'm smart! Not like everybody says ... like dumb ... I'm SMART and I want RESPECT!

2184. New Receiving Antenna Comments, And Grounding Question

Newsgroup: rec.radio.shortwave
Date: 2006-04-21 21:16:11 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <2ZqdnXOnOvoJ1tTZ4p2dnA@comcast.com>
Source record: 71291

Hi,

In the category of "why the heck didn't I do that years ago," thought I'd relate my experience
with a new HF receiving only antenna.

Up to now, have had a simple random length wire running around the four sides of my attic.
Worked, and was able to receive many stations, but was always disappointing.

Bought the PAR EF-SWL antenna, and just put it up outside as an Inverted-L, and away from the house by
about 75 feet or so. Coax run-in to the receiver.
Wow, what an incredible difference.
The noise level is way, way down.

Question; The PAR ends in a Balun, from which I have a wire to a ground bar I pounded into the ground next to it.
From there, the coax starts.

I also have a chassis ground from the radio to a nearby cold water pipe.
Have been putting it on and off trying to decide if it helps to have this additional ground, or hurts.
There is of course the ground loop questions, etc. about having two grounds (the earth ground by the Balun, and this one to the cold water pipe)

Hate to admit it, but am having trouble deciding if it helps.
At times, and for different freq's, I sort of think it
either helps, or makes no difference, at other time, perhaps a bit more noisy.

Most of the time, I believe, it makes absolutely no difference whether this chassis receiver ground wire is on or off.

**Anyone have any thoughts or comments regarding having this additional ground ? **

Should it make a difference ?
I tend to think it shouldn't matter, as they usually suggest grounding the coax, Also, right where it enters the house, which would
be pretty much equivalent.

There is, of course, also the grounding pin of the AC power line, which, pretty much ends up at the same
place, namely a cold water pipe via a ground/neutral wire, from the AC Service Box.

Curious about what all you experts think re these configurations.
Not too sharp with this, and would appreciate any thoughts on.

Thanks,
Bob

What about an outdoor antenna that no one can see? Such an antenna
would deliver better performance for a fraction of the cost.

Are you sure about the patent cost? I thought sync detection was mostly
implemented through a PLL type circuit. You can buy this circuit on a
chip with a handful of support components for it to function. Maybe you
have to add a reference oscillator to the circuit with the other support
components. Anyone should be able to buy and use these designs.

Congratulations on the improved antenna.

You don't say which radio you own but chances are the third prong
(ground) is the radio chassis so another ground wire to the radio case
won't make a difference.

The important ground is at the antenna UNUN.

There may be a way that I haven't tried, but I'm not sure it's worth the
hassle. I'm happy with my SW performance, just wondering if adding a
portable would do better for MW with my AOR loop.

Yes, the odd harmonics 3, 5, 7, 9, et sequentia look like a 1/4 wave
stub.

The capacitor will go across the coil or in other words connect to the ends of the coil.

The capacitor is made of two opposing conducting plates with an insulator between them. For most tunable capacitors the insulator is air. One plate will stay in place and the other will rotate by turning the shaft. When the plates are meshed together you have maximum capacitance and lowest frequency of operation. You will have to look through the case to find the connections to the opposing plates for each section.

I can't tell from the picture but it looks like this box has two or more sections. You can parallel the sections together if one section does not have enough capacitance.

Also hard to tell is what the "screws" are in the picture but I expect
that they are trimmers (additional small adjustable capacitors) that are
arrayed across the main capacitor sections for alignment purposes.

You can do without the PLL, too. You just create the signal with a
separate stage that overamplifies the signal into clipping, then
you have basically a sorta-square wave to feed into the product
detector.

2200. [Hidden] Loop Antennas - Big "Fancy" Flower Box with a Wood and Wire Trellis

Newsgroup: rec.radio.shortwave
Date: 2006-04-21 23:14:49 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145661289.830901.64580@i39g2000cwa.googlegroups.com>
Source record: 71457

DeWayne,

[Hidden] Loop Antennas
- Big "Fancy" Flower Box with a Wood and Wire Trellis
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9150

Once knew a guy "The BlackSmith" who could not have an
Out-Door Antenna to use with his Yaesu FRG-7700 Receiver.

So he built his Wife a two Big "Fancy" Flower Boxes
(2' W x 8' L) and each had a nice Wood and Wire Trellis
{Loop Antennas}

The Flower Boxes sat in a rear corner of the backyard
(at 90* to each other) with a Fountain and small Pond
between them.

Each of the Trellis had Two Rectangular (6' H x 8' L)
Loop Antennas :
* One-Turn Shortwave Loop Antenna
* Ten-Turn AM/MW Loop Antenna.
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm

NOTE - Having these Four Loop Antennas [Hidden] in the
Trellises of the Flower Boxes did require that he run Four
Coax Cables to an Antenna Switch in the Shack and then
he used a MFJ-956 -or- Grove Tun-3 Pre-Selector and
Antenna Tuner to Dial in his Loop Antennas.
http://www.universal-radio.com/catalog/preamps/2964.html

FWIW - I suggested that he only use two Loop Antennas
each AM/MW Ten-Turn Loop and a DC Relay that could be
Turned "ON" from the Shack to 'Open-Up' the Loop at the
Coax Cable Shield's Side to the Loop-End Juntion and
have it function like a Bent Random Wire Antenna about
280 Feet long. He like his design using the Four Loops.

OBTW - One small problem that he did have was that the
Fountain - Pond Pump Moter had to be turn "Off" when he
wanted to Listen to the Radios ;-(

DeWayne - So may be you could build a nice Flower Box
with a Trellis for a Window or two :o) - iane ~ RHF
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/

Robert11,

I never found there to be much of a difference in grounding any radio chassis to a cold H2O pipe myself-- your mileage may vary, but it may be more hassle than it's worth to implement if you notice no real difference.

The new antenna sounds like a very good installation compared to what you had before. The rule of thumb I was taught to go by concerning antennas is try get them outdoors and up as high as you can. In the case of an inverted-L design, those work well for most receiver applications.

Good listening to you,

Jackie

You can opt to use a ground lifter on the power cord and single-ground
the unit to a better ground via the ground terminal. Especially in a
facilitiy where the electricity mains are not in EMT and the ground
wire is a 12 g wire snaking through 50 or more feet of walls to a
breaker box.

2204. Radio Vatican via DRM

Newsgroup: rec.radio.shortwave

From: Al <ABurzynski@nojunk.satx.rr.com>
Message-ID: <Sne2g.16852$0Z4.4646@tornado.texas.rr.com>
Source record: 71461

Received a DRM transmission from Radio Vatican, Santa Maria, Vatican on 9750kHz, 2300 - 2345 UTC. This is not a CBC relay, but direct from the Vatican. There were many drops in the signal, but it was usable. This is a first for me for such a long distant DRM signal.

DRM transmissions via Bonaire, Neth. Antilles, come in near flawless, but they should since I'm in Texas and they're just across the Gulf. Surprisingly signals from Sackville, NB, Canada, on 9800kHz, were nearly unusable. Perhaps they changed their antenna pattern or something.

Sackville is also sending a test DRM transmission on 11830kHz, 2230 - 2355 UTC. The transmission is identified as NAB. Sackvilles transmission on 9800kHz is identified as, the usual, CBC. Many drops, difficult listening.

Telamon,

Being Well Grounded is the Best Foundation for Every Radio Shack
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9152

The Third Wire in the AC Power Cord is by-design an "AC Power
Return Path" -not- and RF Signal Ground Path.

Current Three Wire 'design' is for the delivery of AC Power.
(H)(R)
=(G)=
All three Wires are usually just 1/16" Multi-Stranded Copper Wire.
- - - The Current AC Power Electrical Plug End design looks like :
|| |
O

A better Three Wire 'design' is for the delivery of AC Power
to RF Signal Processing Equipment would be :
(H)(R) 1/8" Multi-Stranded Copper Wire
[===] Flat 1/4" Wide by 1/16" Thick Copper Webbing for RF Ground
- - - The better RF Signal Ground Plug End would look like :
|| |
=== 1/2" Wide by 1/32" Thick

B U T ! - Until then a Second Ground Wire that is by-design an
RF Signal Ground is recommended for most if not all equipment
in the Radio Shack - IHMO

The use of a Flat Webbed Cable or Copper Strap from the Radio
Shack's Ground to the Receiver is by-design specifically to create
an RF Signal Ground Path for that piece of equipment.

Ideally there is an RF Ground Window leading into the Radio Shack
and Everything is "TIED" into it to Create :

The Common RF Ground Radio Shack.
= The Zero Potential Radio Shack.
= The Noise Free Radio Shack.

NOTE - The RF Ground Window is 'tied' to a good earthen Ground Rod
that is Bonded to the House's own AC Power System.

Rec.Radio.Shortwave - Seaches :

About 12 years ago at the Goodwill store,I bought a cardboard box about one foot square plum full of fancy expensive smoking pipes.The guy (Keith) who was the manager of the store charged me fifty cents for each pipe.A few Meercheam (or however it's spelled) and some other fancy famous brand name briar pipes.I guess some lady's hubby had croaked and she decided to donate them to the Goodwill store.

Looka here,there is a guy (Michael Page) who sells old things at one of the big fleamarkets around here and he sometimes would be at that Goodwill store too,looking for things to sell at his booth at the fleamarket.There was a big four feet by four feet by six feet tall heavy duty cardboard box full of junk in the back part of that store.All of those other one foot square boxes in that big box was full of empty mason jars with the lids on them and nobody was interested in them jars.I just happened to discover the box full of them pipes.That guy (Michael Page) was begging me like crazy to sell him those pipes so he could make a small fortune on them at the fleamarket.That's just tough,I dont get rid of my old things.

Yeah, that Dam Sackville signal on 11830 blanketed 11820 to 11840. It
was strong enough for me to hear it in my fillings at S9+30.

Nothing yet. There seem to be some trade-offs involved in most of the modifications. If the customization bug ever hits, I still have a spare, stock radio to fall back on. I have adapted a stereo jack for the external antenna port that overrides the built in AM ferrite rod. It's an easy external change.

>
> Dale W4OP
A more suitable application for the stub filter for HF reception is to notch
out a strong local VHF-FM broadcast or low-band VHF TV broadcast station
that is breaking through as an image in the HF band. Such images can be a
problem on double or triple conversion radios where the 1st IF is in the VHF
region, e.g. 45 MHz. Channel 2 visual carrier at 55.25 MHz would be imaged
near 5 MHz and 98.1 MHz FM would be imaged near 26.5 MHz. Cutting the 1/4
wave stub to the transmitting frequency of the offending image will reduce
or eliminate the image. The harmonic notches will have no adverse effect on
HF signals and the stub length will be manageably short. Of course, a
conventional 30 MHz low-pass filter will be effective at suppressing images
across a broader range of frequencies.

The ground prong is for safety. Manufactures have two ways to go.
Either make the entire exterior non-conductive with a minimum value of
voltage insulation and use a polarized plug or go with the third ground
prong to earth ground that is not normally supposed to carry current.
This ground prong goes to the conductive cabinet of the unit. If a hot
wire inside the unit touches the cabinet it then causes a short circuit
blowing a fuse or breaker preventing electrocution. The white return
wire is supposed to carry the normal operating current for the device.

In the USA at least the black wire is the hot wire with gold contacts
on connectors, white wire is the return with silver colored contacts
and green is the ground. Often the screw to put the ground wire on is
painted green or marked in a obvious way. Wall sockets and power cords
to appliances are all polarized to maintain this relationship of hot,
return and earth ground.

Not as well in deep fades as a 'truly' synchronous detector. That's often
called a 'quasi-synchronous' detector since there is not a synchronised
oscillator, just the amplified carrier, mixed with the signal in the product
detector.

< Snip >

I know that but it still operates as an RF return. The impedance is
higher than what you would want for it to be a good ground and worse it
usually has plenty of noise on it so it should be your last choice.

If the mutual inductive coupling to the hot and return wires was not bad
enough the ground wire often carries noise currents capacitively coupled
from the insides of devices.

The antenna will develop maximum signal at it's resonant frequency. This signal energy will then be transfered most efficiently to the radio when the impedance of the antenna is the same as that of the radio.

A power generator works the same way..the antenna is just a stationary conductor in a moving field looking for a suitable load to drive.

My car radio is isolated from ground by four large rubber doughnuts and still manages to outperform most of the in-house am radios, using an obscenely small antenna on top of it all.

Your advice would imply that dragging ten or twenty feet of logging chain from the chassis would reduce signal noise, at least on wet days.

Is that really a logical conclusion? I'm having problems with your assumptions.

>There is another problem to be considered particularly if the antenna in
>question is to be used for TX. Consider a 1/4 wave stub cut from 50 Ohm
>coax for CH 2 video as above.
The stub with foam coax is approx. 43" long. 50 Ohm cable nominally has
29pF/foot of capacity. The stub will look like a shunt 100pF capacitor well
below its notching frequency. At say, 20M this represents 120 Ohms of
reactance- low enough to ruin the VSWR of a previously well matched antenna.
Pardon if I made a math error- done in my head.

An LPF, as suggested, is a much better solution.

There aren't even any small satellite dishes here. I couldn't put anything
up without being seen. I'm looking at the Ccrane twin coil ferrite antenna
for $100. But I still don't know if it would be any better than my AOR loop.
Anyway thanks for all the help folks. There are a lot of very helpful people
here when someone needs it!

Hello all,

The best mod on the 909/DX398 could be adding the Sync detect. I have a 909 and a Sony SW100. I usually prefer the 909 for the general listening and "browsing" the SW. When I have two stations on the same frequency, I then try the SW100 with Sync. It helps...

Does anyone knows wether this is possible ?

Charly

Telamon - Well written except two little words were missing.

I know that but it still operates as a 'poor' to 'marginal' RF return.
The impedance is higher than what you would want for it to be a
good ground and worse it usually has plenty of noise on it so it
should be your last choice.

This is the very reason 'if' at all possible a separate Ground Wire
should be used as the "Primary" RF Ground to the Radios and
other equipment in the Radio Shack.

Especially if you are going to be using an External Antenna
which requires a Good Ground like an Inverted "L" Antenna
with a 9:1 Matching Transformer and Coax Cable feed-in-line.

2235. C.Crane AM/MW Twin Coil Ferrite Rod Loop Antenna = A Great Signal Magnet

Newsgroup: rec.radio.shortwave
Date: 2006-04-22 09:23:51 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145697831.771465.125310@u72g2000cwu.googlegroups.com>
Source record: 71492

JE,

C.Crane AM/MW Twin Coil Ferrite Rod Loop Antenna
" A Great AM {Medium Wave} Signal Magnet "
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9169
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/2818

The C.Crane AM/MW Twin Coil Ferrite Rod Loop Antenna is
a Directional Antenna; but it is not designed to be used
in a continuous Swing and Turn fashion like the Quantum
"QX" Ferrite Rod Loop Antenna.

The C.Crane usually works best for an individual who has
an AM Radio Station they want to receive {Tune-In} and/or
an AM Radio Station they want to Tune-Out. Once you have
accomplished these two items simply mount the C.Crane in
that position and be happy.

For the most part the C.Crane AM/MW Twin Coil Ferrite
Rod Loop Antenna is a "Great Signal Magnet" for AM/MW
Radio Listeners who are in Signal Challenged locations
where AM Reception is difficult or getting a specific
AM Radio Station is very difficult. For these purposes
the C.Crane works very well.

READ - A Second Look
The AM/MW Active Antenna and SWL Active Antennas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1747

Justice AM Antenna by C. Crane Co. is a "Great Signal Magnet"

one more try to save your some $$:-)

Rather than paying $100, just run wire around the perimieter of the
window in your listening room. Hold it in place with mini cup holders
with suction cups. Works great.

I watched the video but couldn't find any humor in it. Seems like this
Rockwell guy is all worked up over some new piece of gear (motor?) they
developed. I couldn't understand many of the terms the fellow used,
but I am no expert at motion control and automation.

The extracted carrier should be used to lock a locally generated
carrier, with sufficient hysteresis to free run accurately during
selective fades.

The capacitor device is very common in most portable radios. It has two sections for AM tuning, and two for FM tuning. The 'screws' adjust trimmer capacitors which are in parallel with the four main capacitors.

You do not specify what frequency you intend to tune the loop to. If you want it for a band of frequencies what range to you plan to cover. I suggest that you take some alligator clip leads and temporarily hook up the loop to one end of each lead. Then try connecting the other ends to different terminals on the capacitor and tune the cap through its range and listen for an increase in noise at the receiver. You will have to tune very slowly as the high Q of

the loop will make the selectivity very sharp and you can miss the noise point easily.

You would be much better off to get some ham to give you a small variable from his junk box. It will work better and will be much easier to mount in the case. With a one meter loop, a capacitor with a value of 100 pf or less should beable to tune between about 7 and 30 mhz.

There is a ground on the cable. Adding a second ground (or 3rd if
there is a 3 wire power cord) can cause more noise. In most urban
environments the RF improvement to be realized from having a fancy
receiver ground is buried way down in the noise floor. You'd be
better served by talking your neighbors into getting rid of their $5
light dimmers.

Dale [W4OP],

Maybe I Assumed too much ;-(

If he does as you have suggest then he will not have
an Adapter Problem.

However if he simply uses common 75 Ohm Coax Cable
which comes with "F" Connectors on both Ends then he
will need to use and Adapter or two.

Should the "T" that he refers is actually a 75 Sliptter
then again the use of an Adapter would be required.
However, if the "T" is Three-Way SO-239; then if he
takes your suggestions - On Problem.

The Slim Jim Antenna
http://www.hamuniverse.com/slimjim.html

The Slim Jim is a Vertically Polarized Omni-Directional End-Fed
Antenna having considerable gain and this is concentrated almost
parallel to ground toward the horizon rather than skyward making
it more efficient than a ground plane type antenna by about 50
percent better.
http://www.hamuniverse.com/2meter300ohmslimjim.html

Due to it's SLIM {Very Thin Shape} used in it's Design,
there is very little wind loading. It is fed with 50 ohm coax.
http://www.ee.washington.edu/circuit_archive/text/fm10/archive/antennas/slim_j

It uses a 'J' type Matching Stub (J Integrated Matching = JIM),
http://www.pcs-electronics.com/en/guide.php?sub=antennas

Hense the name SLIM JIM.
http://en.wikipedia.org/wiki/Slim_Jim_(antenna)

Credit for the original design goes to F.C. Judd [G2BCX].

The Slim Jim is another name for a J-Pole from everything I read about it. This is a 1/2 wave antenna over a 1/4 wave matching section so your 49 meter band antenna would be rather tall (about 37 meters). Sure, you could make it ..... would be interested to see your plans for installing it 8-}

Howard

I went to the web page, saw the title is "Retro Encabulator", and
didn't bother to load it.

The "Turbo Encabulator" was a joke paper done by some guys at
Bell Labs prior to 1960. The I.R.E. (one predecessor of the IEEE)
had some tape-and-slide-show presentations that local chapters could
order for viewing. Most of these were serious, but the Turbo
Encabulator was one of them. Actually I recall this one as being
tape without any slides.

> With a one meter loop, a capacitor with a value of 100 pf
> or less should beable to tune between about 7 and 30 mhz.

A 80 cm loop gives me reception between about 5 and 12 Mhz, this is with
a cap from a FM/AM radio kit ...
http://users.fulladsl.be/spb13810/oc/IMAG0018.JPG

So, to have higher freq, the loop should be made smaller ... (or higher
cap ?..)

I have made a loop (single turn too) of 2 X 3 meter, so its diameter is
close to 2 meter, and it gives me about 3? to 6Mhz ... African stations
on 5000-5100 come in very well here near Ypres / Belgium .... (at night)
http://users.fulladsl.be/spb13810/oc/IMAG0017.JPG

I used the 2 meter loop with 3 turns on 1600-1800khz, I could get a lot
of pirate stations from holland and ?? Greece or Serbia ...(at night)
Just turn the loop about 90? to switch between holland and Greece ...

In fact, yesterday I read a wiki about "large" loops (compared to freq,
they are large), on FM. I tried the 80cm loop on FM, and ... oops, it
is very directional, very good... I found stations I haven't had before
...

cite: "The (large) loop antenna is similar to a dipole, except that the
ends of the dipole are connected to form a circle, triangle (delta loop
antenna) or square. Typically a loop is a multiple of a half or full
wavelength in circumference. A circular loop gets higher gain (about
10%) than the other forms of large loop antenna, as gain of this antenna
is directly proportional to the area enclosed by the loop, but circles
can be hard to support in a flexible wire, making squares and triangles
much more popular. Large loop antennas are more immune to localized
noise partly due to lack of a need for a groundplane. The large loop has
its strongest signal in the plane of the loop, and nulls in the axis
perpendicular to the plane of the loop."

19:00 to 20:00 UTC

Well 17660 is back. Very good reception today with strong signals on
17735, 17660 and 15315.

17810 is weaker but not bad.

I thought to check 11655 to late and missed it.

>

Hate to put it this bluntly, but this is absolute nonsense. This antenna is an end fed 1/2 wave radiator. The 1/4 wave section does not radiate- it is a Z transformer designed to match the hi end Z of a half wave antenna to 50 Ohms.

As it is a half wave antenna, its gain is 0dBd.

Just beacuse its on the WEB does not mean it has any similarity to being correct or accurate.

You don't normally want to add another ground to the radio chassis when
you have the radio connected to the AC house mains. At best it is a
waste of time.

You want to ground the external antenna outside at the UNUN.

1. One situation I can think of that the ground connection on the radio
would be useful is when the radio is on batteries with a high impedance
single wire Marconi type antenna run directly to the radio (no coax)
connected to a high impedance input like the Drake R8 series has for
example.

2. Another situation is with old house wiring where there is no ground
in the AC mains system. Adding the ground would help with a single wire
Marconi type antenna.

1 and 2 above, the two exceptions, does not apply if a Hertzian antenna
is used.

Grounds are very important for single wire antennas. They are
unimportant for balanced antennas like dipoles.

If you have a single wire like your inverted L then the ground is
important because it is only half the antenna. The ground is the other
half.

How well the ground rods work depends on the ground conductivity so the
bigger rod may make an improvement or it may not.

A better thing to do other rather than pound in another ground rod
would be to add a ground radial. To test this without much pain attach
a wire to the ground stake with a clamp and run it on top of the ground
underneath your current antenna. Check out the difference it makes on
your reception on several stations on different bands to see if it
makes an improvement.

If the wire laying on the ground makes a significant improvement then
you take the effort to dig a shallow trench and bury it.

With the base another 1/4 wave above ground, lo and behold the top of the
Slim Jim for the 49 m band would be ==== 49 metres above ground!

How slim? Probably transmission line theory here so the dimension is
independent of the wavelength. You could probably use 300 ohm twin lead if
it wouldn't break under its own weight.

Make the cap smaller. You can if you put a similar cap in series with
the first you will reduce the total capacity and raise the resonant frequency.
Changing loop length is too much trouble, changing a cap is easy.

Dale [W4OP] - Most 'xyz' dB Gain claims are relative.

Now take this classic Paper Clip it has an 'xyz' dB Gain
over the common Paper Staple . . .

As a matter of fact Two Paper Clips can be used to
form a Multi-Band 'Folded' Dipole Antenna.

One Paper Clip when thoroughly straighten-out can
be used as a Full-Wave Horizontal Wire Antenna

-OR- That same Paper Clip when thoroughly straighten-out
can be used as a Quarter-Wave Vertical Wire Antenna

Then again a Bent Paper Clip could be used as an
Inverted "L" Antenna -or- an End-Fed Inverted "V".

Same basic Paper Clip - simply different applications.

well i am feeling a little bent out of shape right now
cause in this vertual-paper-less society my paper clips
are going the way of buggy whips - iane ~ RHF

The ground wire, even on a single wire antenna, may make little
difference listening wise. I have an inverted L on 20 meters; the
ground makes a huge difference on transmit, bringing down the SWR; but
on receive, I hear no difference whether the ground is attached or
not.

A Marconi antenna is a 1/4 wave vertical radiator with a formal system
of ground radials. It is not just any old end fed monopole.

Since the gain of a 5/8 wavelength vertical is well known and the author
compares his antenna to a 5/8 wave vertical, there is nothing relative here,
rather it is an absolute claim. Totally Wrong, but absolute. The actual gain
is 0 dBd

2288. Re: C.Crane AM/MW Twin Coil Ferrite Rod Loop Antenna -vice- 3 Foot Loop

Newsgroup: rec.radio.shortwave
Date: 2006-04-23 02:31:56 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145759516.866532.220130@i40g2000cwc.googlegroups.com>
Source record: 71346

Switcher,

The C.Crane AM/MW Twin Coil Ferrite Rod Loop Antenna
http://www.ccrane.com/antennas/am-antennas/twin-coil-ferrite-am-antenna.aspx

IIRC - The C.Crane AM/MW Twin Coil Ferrite Rod Loop
Antenna uses a 200mm (8") Ferrite Rod with Twin
{Balanced} Coils and the built-in Amplifier give it
about 20 dB of Fixed Gain.

Instruction Manual {PDF File} for the
C.Crane AM/MW Twin Coil Ferrite Rod Loop Antenna
http://www.ccrane.com/instruction-manuals/twin-coil-ferrite-am-antenna.pdf

INSTALLING - The C.Crane AM/MW Twin Coil Ferrite
Rod Loop Antenna
- While an out-side wall of the House is OK
- The Surface Plane of the Wall may not place the
Antenna in the Direction that you want it for the
best AM Radio Reception or to turn-out an unwanted
Radio Station.

TIP - Simply mount the C.Crane AM/MW Twin Coil Ferrite
Rod Loop Antenna on a non-metalic Braket under the Eaves
of your House or In-the-Attic
- Position the Braket for the best AM Reception and
Nulling-Out your strongest local stations if needed.
- If "Out-Side" is not practical then simply mount
the Antenna on the 'in-side' of a Window near the
center away from the metal edges.

THREE FOOT SIZE LOOP ANTENNA :
* A Three Foot (3-Ft.) Diameter Loop Antenna would have
a much greater Signal Capture Area then the smaller an
8 Inch Ferrite Rod.
* The basic Multi-Turn Loop Antenna is non-amplified.
* The addition of a quality 'low noise' Amplifier
would make a larger size Loop Antenna a real performer.
* Having the 3-Ft. Loop Antenna out-side would reduce
the Noise Levels from having the Ferrite Rod in-side
the House.
* Being able to Rotate the 3-Ft. Loop Antenna at least
90 Degrees would be a great help in Peaking Signals and
Nulling-Out Noise.

FIXED "ON-TARGET" LOOP ANTENNA
"IF" - You are after a specific 'distant' AM/MW Radio Station from a known direction and have the space out-side for a Delta (Equilateral Triangle) Loop Antenna then build a Six to Eight Foot Delta Loop Antenna that is pointed in the direction of the Radio Station. Feed the Delta Loop Antenna with a Coax Cable from the bottom corner that is fartherest away from the Radio Station. Use a Variable or Fixed Capacitor at the feed-point to Tune the Loop Antenna Spot-On-Frequency for that Radio Station.

A Six Foot per Side Delta Loop Antenna with Thirteen Turns (13-T) with a One Inch (1") Spacing between the Windings should allow for the full coverage of the AM {Medium} Wave Broadcast Band.

NOTE - One of these Fixed "On-Target" Loop Antennas can also be set-up In-the-Attic when an Outside Antenna is not allowed or doable.

READ - One Station "Fixed" Out-Side AM/MW Loop Antenna for "The Big 870"

>
> Neutral?
>

The white in a normal 120V receptacle is an identified, grounded(1) conductor. A white in a 120/240V outlet such as an electric dryer, is a neutral. It carries any unbalanced load between the two hots.

All neutrals are identified, grounded conductors, but not all identified, grounded conductors are neutrals.

(1) not to be confused with a groundING conductor.

Dale [W4OP],

"Since the vertical angle of radiation is so narrow,
about 8 degrees toward the horizon, it usually out
performs 5/8 wave or groundplane type construction
due to their much higher angle of radiation. It is
estimated that the Slim Jim has about 6dB gain
over a 5/8 wave antenna due to the extreme
low angle of radiation."

"Editor's Note: There are many gain figures quoted
for this antenna and also various descriptions of the
actual type of antenna on various websites. Some
have even stated that, "In fact I found it outperformed
a 1/2wave over 1/2wave over 1/2wave colinea"

For many of the design applications as a Transmitting
Antenna in the 2-3 Meter range; and a receiving Antenna
for the FM Band. This Slim Jim Antenna is effectively a
small space Antenna that performs well for it's size and
when compared to the greater space requirements of
other Antennas.

RHF,
This is what is claimed on the website though it is indeed not a true
representation of how the antenna performs. They perform no better
and no worse than any other half-wave antenna, besides look at how
they phrase it "estimated 6dB gain over...." which says that is not
calculated, tested or proven. If somebody built a slim-jim (j-pole)
that outperformed a colinear with multiple half-wave sections I'd look
at how each antenna was installed (height, clear of buildings etc) the
type of cable used (well we used hard-line with the slim-jim and 200
feet of RG-174 with the colinear) and wether or not that colinear was
properly constructed tuned. Hey, I'm not trying to rain on your
parade or be the guy who has to tell you that Santa Claus & The Tooth
Fairy or the Easter Bunny don't really exist - but in the end the

slim-jim/j-pole just doesn't perform as claimed on the website you have visited.

Howard

> Eton E1 and this antenna.

I have the original Drake R-8 & the Eton E-1. I only use my R-8 for longwave beacon DX now. The Eton E1 has a better sync detector, not only as far as locking on a faint signal, but also it sometimes seems to reduce adjacent interference and slightly improve sensitivity, using the 6 kHz or 4 kHz filters. It also has a slight effect sometimes on electrical noise. If I don't bother to adjust the passband tuning, the 2.3 kHz filter splits off stations better with sync off, but with slight reduction in volume. If the SYNC is used in 2.3 kHz, adjusting the passband tuning seems more necessary for sharper selectivity. The SYNC even locks on to signals under sideband splash.

Last October I got audio from 28 MW trans-Atlantics on the E1, using only the tiny un-amplified Radio shack loop as my antenna. Plus detected several dozen weak carriers. They seemed weaker & harder to detect on the R-8, using an amplified loop. Maybe I forgot something that made the comparison unfair. On selectivity comparisons, I got pretty good audio separation from stations as close as 180Hz on the R8, using the 1.8 kHz filter, & 120 Hz on the E1, using the 2.3 kHz filter.

Of course most signals aren't faint & buried in splash, so I guess usually you may hear no difference. Some people will say real radios don't run on internal batteries, but with the E1 using rechargeable batteries, I can reduce noise if it is coming in more through the power lines than the air. The E1 image rejection of greater than 90 db surpasses many expensive tabletop models.

My R-8 is rather elderly by now & maybe needs a tune-up? But they are both great radios. Make some comparisons on the weak signals mostly buried under adjacent interference & you may or may not notice a difference. George (MN)

Monroe,

A Ground Need Not Be A Single Point .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9185
The Ground System and the Chain-of-Grounds

If you have a Metal Fence with several Steel or Irn Posts
that are placed in the Ground and Anchored by Concrete.

Simply take a piece of Ground Wire and Drill a Hole
or two at Ground Level in each of about 4-5 Posts.
Then take a Metal Screw and Flat Washer to secure the
Ground Wire to each of the Posts in each of the Holes.
If you want you can Trench an Inch or two of Dirt to
Bury the Ground Wire in between Posts.

Just about as effective as any Eight Foot Copper Ground
Rod that you might install.

One of the Posts will be your main Grounding Point
and the others part of the Ground Chain {Series of
Small Grounds} that forms your complete Ground System.

Making use of what is already there . . .
with the least of work :o)

RadioShack has 40-Ft. Roles of Aluminum Ground Wire
http://www.radioshack.com/product/index.jsp?productId=2049611

Ace Hardware has Ground Rods
http://www.acehardware.com/product/index.jsp?productId=1402216&cp&kw=ground+rod

hope this helps - iane ~ RHF

If you look really hard to find the crappiest tabletop receivers ever built, then maybe. In general, though, if you want real performance, go for the tabletops. And most of all, remember this cardinal rule of receiver purchasing:

A $500 dollar portable is still just a portable. (It's also an extremely bad deal, but that's a story for another time...)

Hey Mike,
Long time lurker - first time poster on this new name. Didn't I read somewhere that you got those machined tuning knobs to work with the DX394? I've had mine all tricked out for a few years with the toggle switches/filtering etc. I wouldn't mind one of those spiffy knobs.

The Slim Jim is basically similar to the J-Pole, as you describe,
but with a folded 1/2 wave section.
The J-Pole is basically a version of the original Zepp antenna, patented
in 1909, and designed to hang below balloons. The 1/4 wave matching stub
and the 1/2 wave radiating portion don't have to be inline, they can be
in a L arrangement with the top horizontal.

I own a big heavy Sunn Beta Lead Guitar Amp in very good physical and cosmetic condition,if anybody is interested? It is big and heavy (weighs a ton) and it has two big and heavy speakers in it.I dont know what its worth,I dont think it is cheap though.I bought it last year for eight dollars at the Goodwill store,it is still sitting out there in my old raggity 1978 Dodge van.
I might be interested in trading it for something real good.Dont try to cheap me out on it.

It's more than just an opinion. It is reasoning based on facts.

You are mixing up topics. Two threads got started on grounds at the same time. We were posting about RF grounds and now you brought the "ground window" into it. The "ground window" is for lightening protection not RF ground.

You will need a hefty battery such as a car battery but there is a 12V
DC connector on the back panel of the R8. Using a battery on the R8
might make the comparison more fair by lowering the noise floor.

But aside from AC power raising the noise floor the E1 has an improved
sync detector over the R8.

I did the whip antenna matching transformer (balun) mod' to my 398. It
really helped to make it more sensitive on the whip. I also removed the
tuning knob detent mechanism to make the knob turn smoothly.

That's the poor man's sync' detector. It works but it's no match for using a PLL with sideband phase cancellation. That's what made the Drake system so good.

> on receive, I hear no difference whether the ground is attached or
> not.

I don't know what your situation is so I can't comment on it. I have done the experimentation and found it makes a huge difference. It could be that your equipment grounded through the AC mains was enough for reception. This will be a poor solution in my area due to the fact that I live in town and the noise level on the AC mains is high.

Basic circuit theory requires that current travels in a loop. No power flows in an open circuit. People recognize this obvious fact when considering DC circuits but for some reason it is forgotten when it comes to RF. The single wire of an Marconi type antenna is half the RF circuit where ground is the other half. The receiver input is across the antenna wire and ground.

A Hertzian antenna such as a dipole has two elements that develop the voltage across the receiver input so an RF ground becomes superfluous.

In any event I proposed a painless way for the OP to test whether a ground radial will help or not. I don't know what the soil conductivity is where the OP lives so I can't advise whether another ground rod will help or not but if an RF ground improvement can be made at the antenna location over the installed rod then the radial attached to the installed ground rod will make a significant difference.

Switcher,

Looks good and the Metric Value Input is nice idea.

"Metric - AM Loop Antenna Calculator"
http://users.fulladsl.be/spb13810/amloop.htm

1. IIRC the "Enter Edge Length" is the Measurement
for One Side of a Four-Sided-Square.

Examples : Calculating One Side of a Square
using other Shapes :
* One Square Side = One Square Side
* Sum of the Sides of a Triangle
(S1+S2+S3) Divided by Four = One Square Side
* Sum of the Sides of a Rectangle
(S1+S2+S3+S4) Divided by Four = One Square Side
* Diameter of a Circle Times (x) Pie = Circumference
Circumference Divided by Four = One Square Side

2. "Enter Loop Width" is the Measurement across the Space
{Accumulated Spaces} between First and Last Turns.

Example - Eleven Turn Loop with 25cm Spacing
has is Ten Spaces which add up to the Loop Width.
* Number of Turns Minus (-) One = Number of Spaces
Number of Spaces Times (x) the Spacing (Gap) = Loop Width.

NOTE - A direct Link / URL from your new webpage to the
original "AM Loop Antenna Calculator" -by- Bruce Carter
would be nice too.
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm

For One and All,

Per "Telamon" - A Hertzian Antenna such as a Dipole has two elements
that develop the Voltage across the Receiver Input
- - - So an RF Ground becomes superfluous.

This Statement may be True a the specific Frequency that
the Dipole is Designed to Operate at {Resonance} .

"IS" this Statement always True at other Frequencies that
the Dipole was NOT Designed to Operate at {Non-Resonant} ?

QUESTION - Does a "Non-Resonant" Dipole Antenna work better
{Benefit} when a Receiver is RF Grounded in the Shack ? ? ?

According to the terminology in the CEC and NEC, the
"grounding" conductor is for the safety ground, i.e., the
green
or bare or green with a yellow stripe wire. The word
"neutral"
is reserved for the white when you have a circuit with more
than
one "hot" wire. Since the white wire is connected to neutral
and
the grounding conductor inside the panel, the proper term is
"grounded conductor". However, the potential confusion
between
"grounded conductor" and "grounding conductor" can lead to
potentially lethal mistakes - you should never use the bare
wire

as a "grounded conductor" or white wire as the "grounding
conductor",
even though they are connected together in the panel.

[But not in subpanels - subpanels are fed neutral and ground
separately from the main panel. Usually.]

Note: do not tape, colour or substitute other colour wires for
the
safety grounding conductor.

In the trade, and in common usage, the word "neutral" is used
for "grounded conductor". This FAQ uses "neutral" simply to
avoid potential confusion. We recommend that you use
"neutral"
too. Thus the white wire is always (except in some light
switch applications) neutral. Not ground.

Since performance can be assumed to take into account many factors I
think it is safe to say a portable of the quality of a 2010 will run
circles around several (but certainly not all) tabletops.

"A portable is an extremely bad deal." Hmmm...you must have benefit of
special insight that legions of purchasers of portables have completely
missed. I'm sure they (and I) would appreciate your insight into the
qualities of portable radios, so please feel free share them.

Frank thanks Georgia Governor Sonny Perdue for singning a sweeping immigration bill into law. Frank argues that the law should not only apply to employees and business owners, but to politicians as well, and proposes a legal limit on the amount of wealth politicans have so that they are less corrupt and more responsive to the issues of the American people. Frank also says politicans who are pro-illegal alien, or are caught employing illegals, should be stripped of their office and immediately thrown in jail.

Frank also proposes turing the entire American population into a defacto militia, awarding an American citizen a $2000 bounty for every illegal they identify.

Also, Frank addresses the talk radio plagurists who steal his material, word for word... Lionel Richie condemned for his support of Momar Khadaffi-duck... NYC Mayor Bloomberg's heavy taxation policy driving people out of town... Bill Clinton calls in to discuss the week's events... Rush Limbaugh and don't get the Duke rape story... The politics of high gas prices... Frank explains what a "Berengian" is... your phone calls at 718-761-9996 and much more.

Certainly is, the point is a dipole is a balanced antenna, i.e. a
signal impinging on the antenna will have two components that 180
degrees out of phase. Thing about which end of each half the feed
comes from. So one side will always be the opposite orientation from
the other side.

All that happens when the antenna is not resonant, is the effective
impedance changes, and will contain a reactive component. That
usually reduces the power transfered from the antenna to the front end
of the receiver.

John S. wrote:
> A for instance would be: A Sony 2010 will outperform a Kenwood R300.
> And I'm sure you can come up with several others.

it is interesting the manner in which certain portables have narrowed
the performance gap between portable and tabletop.

The Sat 800 and E1 would be prime examples in this respect. (yeah, I
know, some folks have trouble carrying a Sat 800...probably the same
folks who take an elevator to get from ground level to the second floor
of a building... ;-)

Also, models such as the Drake SW8 (and the Sat 800, for that matter)
have served to blur the distinction between portable/tabletop.

That's because they would be to big for most people to construct for
short wave and they are very directional and so they would have to be
rotated.

Story for another time? Steve, it seems to be your story every single time you comment on the E1! ;-) (and you usually have a ranting Cuhulin jump in to back you up)

In any case, I consider the $450 I paid for my E1 to be money well spent. Great set, the E1.

Stick to your tabletops, if that's what works best for ya. I know that having an E1 is not going to lead to my sellin' my R8B. But the E1 does fill a niche...and one that needed filling, in my opinion. And it's nice to see a portable come out that actually offers performance advantages over other radios in its class.

Does the E1's performance match the overall performance that you'd get out of a good quality tabletop model? No, I wouldn't say so. But I'd say it's performance is in the grade of those radios that PWBR has tended to designate as "portatop" (e.g. Drake SW8, Sat 800). Overall, my preference tilts slightly toward the SW8, in a comparison of the E1 and SW8, although there have been more than a few times that the E1 has produced a more usable copy on a signal than the SW8.

While I've been a fan of some of the upper end Sony's (e.g. SW77 and '2010), I have to concede that the E1 raises the standard for an upper end portable a few notches above that previously set by these venerable Sony models.

Regards,

Junius

I wasn't thinking specifically about the E1. Back when Sony charged that much for new SW77's, I made the same complaint. I personally wouldn't spend this much money on any portable so long as there are tabletop receivers in roughly the same price range. But hey....to each his own! There are some listeners our there for whom portability is a paramount concern.

Actually, I would never say that a portable receiver is necessarily a bad deal. I have a Sony 7600GR, for example, that I spent a little over a hundred bucks on. That was money well invested. I've gotten many, many hours of enjoyment from it and it continues to go strong. I'd say the same about my little Grundig Mini-World receiver, which is literally so small it fits in my shirt pocket. There are some very, very good deals to be had on portables out there.

Matt is explanation correct but I would like to add a little more
information on what happens on receive. If the dipole is a half
wavelength then the antenna output is at the maximum voltage point.
This a resonance point because the EM wave is 2X length of the elements
electrical length. The elements are 1/4 wavelength each.

When the EM wave is longer or shorter than the antenna's electrical length the antenna output is not at the maximum point so the output decreases. When you get to a frequency 2X what the 1/2 wave dipole is cut for the antenna output point is at zero volts and the antenna will appear to be deaf at that point.

It is easy to visualize what is happening. Draw a sine wave and below it draw a line under the positive excursion, zero volts to max positive and then back to zero volts. Make a break in the middle of the line. These two break points in the middle of the line are the 1/2 wave dipole output. Each line segment is 1/4 wave length. You can see the voltage is at maximum in the middle of the line and zero volts at the ends of the line.

Now do the same thing for a 1 wave length dipole. Draw a line under the entire sine wave and make the break in the middle of the line. Each line segment is 1/2 wave. Notice that now the antenna output is at the zero volt point where you go from positive excursion to negative excursion and so there is no voltage at the antenna output.

Now all you need to visualize is that going from 1/2 to 1 wave length you go from maximum possible output to nothing. You can't see radio EM waves but why things work as they do is not hard to visualize.

Funny you should ask.....I am working on a new
iteration for the MW receiver. The 2nd I.F. subsystem will be using an
NJM2552 AM/FM chip. Using this device, I will be able to take the limited
I.F. signal out of the FM section and send it straight to the Sync detector.
I am waiting for samples on this device.
SI has put the project on the back burner for the time being.....they
still have to get the control code together for the display.
The Drake '4-line synthesizer has a bug in the control
code.....incrementing up in frequency is fine, but when you tune down the
rules sometimes go out the window. I have tested the prototype on my SPR-4,
and it does work very well.

Pete

> painted green or marked in a obvious way. Wall sockets and power
> cords to appliances are all polarized to maintain this relationship
> of hot, return and earth ground.

I can see some people are still confused about some points.

Current travels in a loop. DC batteries, AC power mains, RF current all travel in a loop. People recognize this when they draw a circuit as in basic circuit analysis but it is forgotten when applied to either RF or AC power mains supply.

The power mains is AC or alternating current. This voltage is stepped up and down throughout the power distribution system with transformers. Now you must understand that when power goes through a transformer it is now isolated from ground. The two wires from the transformer secondary are hot or have voltage potential RELATIVE to EARTH GROUND.

Now this relationship of both secondary leads from the last transformer to your house is usually modified at the input panel. Now here come another concept where things purposely change. One of these secondary wires is connected to EARTH GROUND through a GROUND ROD. This wire becomes the "NEUTRAL" because it is neutralized to ground through the connection to the ground rod. Now the other secondary wire has alternating voltage on it RELATIVE to EARTH GROUND and is called the hot wire.

Notice that the voltage relationship between each wire to earth ground is changed through the use of the ground rod. Black is the hot, white is the return or neutral and green is the safety earth ground. Normally all the power flows on the black and white wires. If you connect a light bulb to a white wire and the other side to a ground rod there is no power to light it. If you connect the black wire and ground rod it will light up.

Also notice that the voltage relationship between the two wire does not change only the voltage from each wire to EARTH GROUND. This is a common mode voltage shift relative to ground. Either transformer secondary wire could have been chosen to be the return.

Final step down power pole also usually has a ground wire on it and so do your neighbors. Since you now have multiple grounds on a power line to your house and there is a voltage drop along the line this generates a voltage gradient in the earth between the power system ground rods. Now you know how it happens that you will see a voltage potential across separate ground rods.

The two wires, black and white, are the AC mains power circuit. All loads go between these two wires. Black and white are the source and return, which all loads are across.

Now we consider the third wire or EARTH GROUND wire in the three wiring system used today. This third and separate wire is also connected to a bonded strip that is the EARTH GROUND in the power panel. There are TWO

BONDED STRIPS in the panel, one for return and the other for earth ground. This green earth ground wire is supposed to connect to the conductive cabinet of any appliance plugged into the AC power mains. Now if the hot wire contacts the cabinet there is a short circuit to earth ground blowing the fuse or breaker in the power panel. This prevents AC power from going through YOU to EARTH GROUND.

This green wire is for safety purposes and does not normally but can carry the return current to power a device or appliance in case of an internal fault.

Whether the $500 is in or out of the quote is pretty much irrelevant to the conclusion that you are seriously out of touch with current radio technology. Yes, I know the Zenith TO is a marginal performer when compared to modern tabletop (and portable) receivers. But you need to move forward at least 5 decades in your thinking and experience. Most modern portables will outperform several table top receivers (and remember the 2010 and more recent offering from Eton are priced below your beloved $500 number).

>

I can't imagine why you would want to spend $5000 or $500 on a hamburger, but if that is what floats your boat, then who am I to deprive you of that pleasure.

>
> Enjoy your burger!!!! And maybe you'll think twice now before shooting
> off your mouth again.

You may wish to look at the portables offered in the post 1970's world before making such a completely unsupported statement again. You really come across as out of touch.

Oh, "several"...so what? No one said anything inconsistent with that,
so why are your panties in a twist?

I didn't say anything about portables that isn't freely available to
anyone who looks at the price sheet on the Universal Radio website. You
must be confused.

THINK first, THEN post to the group. Your life will improve as soon as
you take things in this order.

This kind of defensiveness speaks volumes. It's easy to tell when
someone has sunk a large amount of money into a receiver and then
regrets it. They have to make others pay for (what they perceive to be)
their mistake.

Hey, let's ease up on things in here, folks...

Tonight on Masterpiece Theatre:
Under The Greenwood Tree
Keely Hawes stars in this adaptation of Thomas Hardy's novel about courtship and love in rural England in the 1870s. It is a moving and funny romance charting the relationship of school teacher Fancy Day and the laborer Dick Dewey through four seasons, from their first meeting in winter to their eventual marriage -- under the greenwood tree -- in autumn.

Yo, buckwheat...you were the one who said:

"A $500 dollar portable is still just a portable. (It's also an extremely bad deal, but that's a story for another time...)"

Before you can hope to post something meaningful, it is really important that your bring you thinking and experience forward about 5 decades. Consider reading 25 years of back copies of publications such as Monitoring Times, Passport to World Band Radio (and it's predecessor RDI) and World Radio TV Handbook as a start.

Actually for my first decent tabletop receiver I paid $400.00 new for a Kenwood R5000, added the filters, memory option and a few other goodies. After that I picked up a fully functional National HRO 500 for $25.00 plus commission at an auction.

But the radio that really got me started in SWLin'g was the high-performing Sony 2010 Portable (before the R5000) that sold for way under your magical number of $500.00 And yes it will outperform many tabletops.

I'm at a complete loss as to what what you are talking about..., bud. There are guys that will sink a lot of money into old communuications receivers (R390) and some of the new comm stuff that comes on the used market. But they really are basically just ego boosters for guys like you aren't they.

Have you ever had to deal with a 3 wire 3 phase power drop (i.e.
without a neutral)? Not very common. Drives electricians nuts.

Just stating the obvious, Sunshine.

Look, we've all made purchases we later felt bad about. No one is criticizing you for it, but Jeez...you gotta own up to the mistake and then move on. Continuing to twist your panties around isn't going to get you anything...well, except maybe a rash or something.

Hope this helps.

Damn, I guess I really hit a nerve.

Congrats on the 2010. It was a pretty good deal in terms of price and performance. At least you've owned one portable that you don't have to feel defensive about.

As for the rest of your verbiage, I don't know what to tell you. If you can't conduct a serious (or at any rate, halfway serious) conversation about receivers, you came to the wrong place. I feel a little sorry for you, since you're obviously out a lot of dough. At the same time, your being all nasty and defensive ain't gonna hurt me, and it ain't gonna make you any smarter. Just try to do a little research next time, preferably BEFORE you make your purchase.

Hope this helps.

Hmm, I bought a '2010 new in 1988 for $325 at Ham Radio Outlet, Atlanta (Larry Galecki made the sale). Good radio, although it's no longer in proper working order now. I did get my money's worth out of it, though.

Of course, the dollar was worth more when I bought that radio. In 2006 dollars, we'd be talkin' about $530.75 for that purchase in 1988.

http://minneapolisfed.org/research/data/us/calc/

((Needless to say, I understand your argument, Steve: you're weighing the cost of the E1 relative to other radios on the market today when making the assessment that it's not a good value for you. Still, I throw this out there because it's worthwhile to note that our dollar has declined in value over time.))

Thanks for responding, Pete! I am glad to hear that your receiver
project is still going ahead, and I'm looking forward to it coming on
the market.
I'm also glad that I learned of your interest in the Drake frequency
synthesizer, as I've just aquired an R4B and don't know how difficult
it is yet to find SWL band crystals.

Wow, where did you get a new R5000 for $400.00? I remember pricing
those back in 1989, and the best price I could find was $779.95....

Gilfer...(remember them) were selling them for a good price early on.
The yen went out of sight and Kenwood jacked the price up.

Steve's the kind of guy that has poured a lot of money into some junk
receivers. And to justify those purchases he feels the need to tear
down the purchases of someone else. I guess he can't stand the
thought that a portable could run circles around many tabletops.

Yes, it was Voice of Africa and its very 'interesting' news and news analysis. They sometimes throw ten minutes of English programming into their broadcast. Catching it can be a challenge.

Yes, fine folks. They sold a guide to Utility Stations that was really
helpful too.
They were one of the first of many SWL/Ham stores to close up in the
early 1990's as I remember.

So you think an R8B and a 7030+ are junk? You're really going to have to overwhelm me with your "expertise" before I believe that.

Why are you so upset about all of this, anyway? You don't even know me, and some casual remark I made on a newsgroup has reduced you to a raving imbecile. Life is too short! Go have a beer or something. Laugh at a joke and get things in perspective.

It's all gonna be okay. I promise.

Dear DeWayne,

Look what has happened to your original query! (And I'm afraid I also contributed to this.)

Bottom line (in my opinion): research and buy a better MW antenna than the AOR LA-380. One that is especially dedicated to MW should improve your reception as much as is possible. The C. Crane is very good (I own one) as is the Select-A-Tenna (I own one of those too) and the Quantum antenna I mentioned in my first post is, according to Jay Allen (in his Radio Intel review) even better yet. Check the antennas out for yourself.

I really think that another radio is not the answer to your quest for better MW reception (you already have one of the best); a new MW antenna is!

Best,

Joe

> without a neutral)? Not very common. Drives electricians nuts.

Why would it do that? A three wire feed implies a balanced load, such as a three phase motor, charger or welder supply. Voltage drop is measured line to line and line current is still measured the same way, as are power factor numbers.

The only difference in a three phase motor connection is assuring correct direction for motor rotation. Some things break in a dramatic fashion if turned the wrong way.

Is there any problem with maintaining a setting? I was wondering whether there is sufficient friction remaining to keep the knob in a particular place.

I think that you can order the crystals from such companies as International
Crystal, but the synthesizer will provide a good solution. I am thinking of
using the DDS as the reference portion of a hybrid design, using a PLL to
clean up the artifacts from the DDS output.
Essentially, the DDS will tune in 500kHz steps, with an I.F. offset that can
be user programmed for the R4 and the SPR-4.
I am tossing back and forth between using an LCD or a 3 digit LED readout.

Pete

How would you compare the performance of those two receivers when using their whip antennas on HF? The SW8 is known for being somewhat insensitive on it's whip, particularly the earlier versions. Drake made an improvement to the whip in 1994 by redesigning the matching impedance of the whip's input circuit. Contrary to what some believe, Drake never added a pre-amp to the SW8 whip circuit. However this was done on the Sat-800 which is closely related to the SW8. It's why the Sat-800 is more sensitive on it's whip for HF than the SW8.
What year was your SW8 made?

$325 seems high for a new 2010 in 1988. Are you sure it wasn't $225?
They were originally priced at around $230 when they came out in 1984. I
bought a new one from 'Grove' for about $275 in 1991. I had seen them on
the gray market at that time for about $225 but I didn't want to take a
chance on the warranty. After Sony succeeded in eliminating the gray
market for the 2010 they raised the price to well over $300. They must
have been making a good profit in the latter years of the 2010 since
their design and tooling costs had long since been recovered.

His wife kept the business going for a while but they eventually had to
call it quits. Gilfer offered some good mod's on new receivers like the
FRG-7 and Icom-R70/R71. I think I bought my Panasonic RF-2900 from them.
I remember the price was $229.

I haven't noticed any problem with the tuning knob moving on it's own, since I defeated the detent system. It turns much smoother but still has some resistance. I suppose it could be accidentally moved if it came in contact with something. This might happen when the receiver is laying down on a soft cushioned surface like some furniture but I wouldn't be concerned about it. The tuning knob has a much better feel without the detents.

No, that was a good price. I had a friend who was a grey market importer
who brought some in when they were first made before they were imported
by Sony. I got one of those, his cost was over $350.

The "legal" ones sold for almost $400 for a long time.

Geoff.

Fantastic tip = tks 4 the heads up Mark.
Hanga Roa has been my "Holy Grail" of catches for years, but alas, I have never got it.
When I was really trying hard for it and researched it there was only one flight a day there and that would mean me being up at 3.00 a.m. local time to try for it.

Your info indicates there are perhaps more flights operating now with a better chance of getting it.

My old radio pal David Norrie emigrated to Auckland - he is a serious MW DXer. Have you ever come across him in club circles?

2429. ICF-2010 Repair

Newsgroup: rec.radio.shortwave
Date: 2006-04-24 13:42:13 UTC
From: Steve Cooper <steveco826@comcast.net>
Message-ID: <nMydnTjwDfQuSNHZnZ2dnUVZ_v2dnZ2d@comcast.com>
Source record: 71687

A couple of people in this group suggested that I join the ICF-2010 yahoo group in order to find a resource who might repair my 2010 radio. Ray Babbitt and someone named Noel were mentioned to be people who might help me.

The yahoo ICF-2010 group appears to be dead. There's been no messages this year and my request to join the group has gone unanswered. Any other ideas on how to connect to a repair resource would be appreciated. Perhaps someone can supply me with an e-mail address for Noel or Ray.

Thanks.

Steve

> What year was your SW8 made?

Well, you're right...for the SW8 to shine, it requires something more
than just the whip. For greatest simplicity, one of those Miracle Whip
antennas will do in a pinch...easy to use, connects directly to more or
less become a part of the radio, and provides a decent amount of gain
over the whip. Of course, ideally a higher gain antenna should be
used.

I've got two SW8s: a '94 and a '96 (w/synchronous selectable sideband;
better sensitivity).

The E1 definitely has an edge when we're talking about sensitivity off
the whip. But then, I don't really use either off the whip antenna.
So that deficiency on the part of the SW8 has never been anything I've
taken into account.

Got the invoice in hand here, actually... 12/09/88, 5:01 pm...
Actually, it was $329.95. And that was an okay price....a lot of 'em
were selling for $350 or so.

That's pretty darn good if you got a new one in 1991 for $275. Heck,
we're talking about purchases made over a decade ago, but here I am
envying you on the price you found on your '2010 and John S. on the
price he found on the R-5000.... :-o

This looks like what hams call a J-pole antenna. J-poles are popular
on the VHF and UHF bands. There's not much use of them on the HF bands
because they would be way, way huge -- your 49 meter version would be
about the size of a telephone pole.

Rhf, ya really oughtta go to Amazon.com and pick up a used copy of the
ARRL Antenna Book; David's advice was right on.

A lot of people get in to SWL and go all out the very first day. Upgrade slowly and enjoy the hobby as you go. Rather than going for a ten foot ground rod all at once, slowly migrate to a ten foot ground rod. Maybe try a six footer next and then move on to a ten. No sence in over doing it right away. If it turn out you don't like SW listening, you won't have to find a buyer for a used ten foot ground rod. But maybe you could find someone to buy a used one on eBay, or start a new usenet froup: rec.radio.ground-rod.swap

Brian,Yes,I still do have that Sunn Beta Lead Guitar Amplifier.It is still sitting out there in my raggity old 1978 [Al Bundy] Dodge van in my driveway.For the last couple of days,I have been trying to figure out how am I going to ship it safely to you.You are a Musician dude and you know them things are large and heavy.I am willing to ship it to you for shipping charges and let you check it out and then if you still want it,you can make me an offer.

I think it is a tube type Guitar Amplifier.It is in good physical and cosmetic condition,but I dont know if it might need a new tube or some other kind of repair or not.I think you know much more about those sort of things than I do.

> Where does the 120 come from?
>

The cycles of each phase are out by that many electrical degrees in
relation to each other. I've never seen 120V three wire 3 phase. The
lowest voltage 3 phase 3 wire I've experienced is 208 volts.

If there is a 'wye' connection with a central white leg, (3 phase 4
wire) then you will see 120 volts from a hot leg to this white (neutral)
and 208 volts between any two hots.

The numerical stuff is covered here:

http://encyclopedia.laborlawtalk.com/Three_phase

The really scary math happens with major short circuits on a leg causing
asymmetric fault currents.

Uneven power factor loads in the phases can make some interesting vector
diagrams..

it's been a while since school...sigh...

Yes it uses the Mini-Circuits VCO. The plans are available from the ARRL download site. Here's the schematic.

David,

Hence the AGC Circuitry in Radios, so that a Strong Signal
that is developed by a Resonant Antenna is Averaged 'down'
-and- a Weaker Signal that is developed by a the same Antenna
at a non-resonant frequency is Averaged 'up' : So that both
Signals 'appear' to sound about the same to the ears.

NOTE - The Stronger and Weaker Signals are what the Radio
receives at the Antenna Input. In reality both Signal are
relatively the same strength around the Antenna.
* One Signal is at Resonance with respect to the Antenna
and therefore the Antenna develops a greater signal
"A Stronger Signal" that is sent to the Radio's Input.
* The 'other' Signal is Not at Resonance with respect to
the Antenna and therefore the Antenna develpos a lessor
signal "A Weaker Signal" that is sent to the Radio's Input.

and that is why the proper antenna is important
to good radio reception - iane ~ RHF

A Cornered Administration: Dangerous Times Ahead

DAVE LINDORFF | April 25 2006

The noose is tightening around George Bush and his gang of White House crooks and liars, with prosecutor Patrick Fitzgerald reportedly getting closer to an indictment of Karl Rove, and now with the Illinois and California state legislatures considering resolutions that would have those states submit bills of impeachment to the U.S. House of Representatives--an alternative means of bringing an impeachment case against a president when, as now, the sitting members of Congress don't have the courage or conviction to do so themselves.

These are dangerous times, because the Bush family history, and the Rove M.O., are to attack viciously and without restraint when cornered.

At a book signing on Friday at Columbia University, a number of journalists told me they worried that Bush, Rove and Cheney, if they thought they were going to lose the House in November and face serious investigations into their crimes and deceits, would do something treasonous, like launching a war against Iran, or perhaps allowing another major terrorist attack against a U.S. target, so that they could then clamp down further on domestic freedom and ramp up jingoistic support among their wavering base.

The time for vacillating, cowering Democrats is over. The only way to defeat this threat is to warn about it and resist it openly now.

Democrats also need to stop waffling about voter security and vote fraud. It is essential that all voting machines in November have paper records, and that an army of activists begin now preparing to block Republican efforts to confuse and intimidate progressive voters to keep them from even getting to the polls.

Italians and other people in nations around the globe have shown the way, standing up to fraud and intimidation to insist on honest elections, and throwing out charlatans.

November 2006 will be America's turn.

Will the American people be up to the task?

Three state representatives in Illinois--Rep. Karen A. Yarbrough (217-782-8120), Rep. Sara Feigenholtz (217)- 782-8062), and Rep. Eddie Washington (217-558-1012)-- have struck the first blow in defense of liberty, and have shown us all the way. They were quickly followed over the weekend by California Assemblyman Paul Koretz (310-285-5490), who introduced a bill calling for impeachment of both Bush and Cheney.

Pete! Man, are your technically oriented writings a sight for sore
eyes! :-)

I'd like to ask a question, and though it's a bit of a threadjack...

Are you familiar with the OptoElectronics Scout series of frequency
counters? They are notorious for blowing their first amplifier. The
RF circuitry is all SMD, so I don't have any way of identifying the
part to replace it (hopefully with a more durable replacement).

Ever dealt with them? They aren't exactly lab grade... ;-)

ObOnTopic: Git that radio on the market, sir! I wanna buy one o'
them!

One option, since it appears you're in Canada, is to record CBC Radio One overnight. Between 1 and 5am they relay various foreign stations. You could get a cable with two "RCA" plugs on one end and a "1/8" stereo plug" on the other (available at Radio Shack and most computer stores) to patch a tape record output on your stereo to the "line input" on your computer's sound card, then use a timed recording program like Total Recorder (http://www.highcriteria.com , there are other choices out there) to automatically record to your hard disk at the desired time.

I might take some heat for mentioning satellite radio in a shortwave forum. Nevertheless, it seems an option that you might consider, given what you're interested in doing:

Sirius satellite radio, now available in Canada, has a variety of programming from international broadcasters. Check out the content on the World Radio Network (Sirius channel 140):
http://www.sirius.com/servlet/ContentServer?pagename=Sirius/CachedPage&c=Channel&cid=1102975192966

Also, Sirius's PRI channel has carries DW programming, among other things. The CBC Radio One channel on Sirius also carries a few hours of the Overnight programming mentioned by Doug.

This does, of course, requires a subscription, your payment of a monthly fee, and your purchase of a Sirius satellite radio receiver and antenna. A lot of these receivers have FM transmit options whereby you can receive the signal from your satellite receiver onto any FM tuner in your home. Also, of course, there are line out jacks for direct connection to your stereo equipment.

Then there's the shortwave radio route which is another story altogether... Very interesting and a lot of fun... Might require a bit more patience initially and a willingness to endure sometimes less than optimal audio quality.

junius

Since the websites of a growing number of int'l broadcasters permit the downloading of full programs, you might consider the option of getting an iPod or like product whereby you can just load the programs that you're intersted in hearing, and then you'll have complete control in playback.

Dear Ms. Amy,

In my opinion, the easiest way to hear foreign radio stations over your stereo is to buy a Sony ICF-SW7600GR shortwave radio, available from Amazon.com, J&R Music World, Universal Radio, and/or Amateur Electronic Supply (AES), and a number of other dealers.

This radio has a "line output" which, via a cable available from Radio Shack, Best Buy, Circuit City, etc., can connect to your stereo via its AUXiliary jacks. This is very convenient. In addition to listening via your stereo, you can disconnect the radio and take it with you and listen to it directly while sitting outside, staying in a hotel room, etc.

The total cost would be $170 or less (definitely less if you check with Amazon and/or J&R and look for their "sales" on this radio).

It really does work very well indeed.

Alternatively, you could buy an FM transmitter from C. Crane Company and connect this transmitter to your computer's audio output jack. Then you could hear the programs (picked up by the computer and re-transmitted by the FM transmitter) anywhere in your house or yard where you can have an FM radio.

But I think the first optiuon is the best. I don't like listening to radio on my computer - too many "drop-outs," "buffering," etc. This, to me, is very frustrating. Not that shortwave listening is "easy," but I'd rather "put up" with radio's flaws than the computer's.

I hope the above gives you some "food for thought."

Best,

Joe

I prefer antennas for reception closer to the space impedance around it.
A ball park antenna type is a folded dipole. It can be made cheaply with
300 ohm twin lead transmission line and 4:1 BALUNs to connect it to 50
ohm coax is also cheap and common.

Another advantage is it is grounded so static charge pickup is shunted.

There is a trick to make it perform better on bands other than what it
is cut for using shorts at a specific distance from the ends depending
on the band for which it is cut.

You can use the dipole concept by using several cut for different bands
tied together at the antenna output. For this to work well the
paralleled elements need to have a relationship to each other that
prevents the energy picked up from one element flowing into another
element.

> - out there . . .

I don't care for the language of "trick answers" or "black magic" when it comes to RF or antennas. RF and antennas behavior can be understood. This understanding can be shallow or deep depending on what your needs are or what you are trying to accomplish. Here in this news group where we are interested in short wave reception we only need to understand basic antenna and grounding behavior where simple algebraic formulas to calculate antenna element lengths are easily found on the Internet.

Depending on your location some antennas will work better for you than others and so is one level of investigation.

1. Determine the antenna type for your application and location.
2. Find the formula to determine the element lengths.
3. Using inexpensive wire, cable, insulators to build it.

300 Ohms matches better to 75 Ohm line with a 4:1 transformer.

4 X 75 = 300

4 X 50 = 200

Thanks for all these suggestions, guys. And fyi I am not an international wimins, I am a displaced American living in Canada and dying, dying, dying with the awful radio stations up here. My husband is from France and he too is dying with the radio. I work for a US company out of my home, which is why I am not interested in using my computer as a stereo receiver. I am, however, very interested in in the Sony ICF-SW7600GR. We will only be looking to pick up major NY and major France stations, no obscure stuff. As we are pretty clueless to doing this, is it a big deal to FIND the channels we want once we turn on the radio? I mean, do we just have to scan at will to find them, or is there a code for each station?
Amy

From the description I am unable to determine the antenna type. If I was to take a guess that both sets of elements are the same length and that they are supposed to be spread out in a "X" shape then this is an antenna designed to couple very strongly the space around it. The result of this type is a comparatively high voltage output. This is useful for a radio with poor sensitivity. This type will generate a stronger voltage for a signal for which it is cut than a dipole.

This antenna type is appropriate for tube type receivers as rain, snow, sand or just blowing wind conditions will have a stronger tendency to generate a larger static charge compared to other antenna types. This could be a problem for solid state radios. You would want static protection for a solid state radio with this antenna.

You can use one of the FM devices used for playing mp3 players thru the car radio, and plug it into the audio output jack on the computer or the headphone jack on the speakers. I use an Irock, which I bought from Radio Shack for $29, and it broadcasts the sound all around the house in FM and them I pick it up on any FM radio. You can also use it for any audio source such as cassettes, scanners, portable cd players etc. Works great

Good on topic answers.

Internet listening has it's problems. The BBC for example always sounds
like crap with the low bit rate and nauseating audio compression.

Short wave listening takes more effort than the AM, FM broadcast bands because stations are on different frequencies at different times. Short wave broadcasters transmit from different parts of the world to different regions so you will need to either purchase or surf the Internet for schedules to your area. Even though you can pick up broadcasts meant for different parts of the world it takes better equipment and antennas than the portable you are considering.

The Sony ICF-SW7600GR is an excellent portable.

You need to check out the schedules meant for your area so signals are strong and have the programming you want to hear. You should be able to get programming in French without a problem at different times of the day and evening as Radio Canada and of course France broadcast in French. You also have Canada's domestic service in english on short wave.

If you find a particular short wave broadcaster you like they usually have complete frequency and program schedules that you can print out.

Two popular guides to short wave broadcast listening are Passport to World Band Radio 2006 and World Radio TV Handbook 2006. They are printed guides and some of the information goes out of date so if you find a discrepancy goto that broadcasters web site for up dates.

Could be two dipoles cut for different frequencies, sharing a common
feedline. See below:

"Scott's mind was always full of improved designs. In 1940, he
developed an elaborate 26 tube communications receiver which was
produced in very limited quantities. Known as the Scott Special, this
set was perhaps the last and greatest of his ingenious designs. The
circuitry bore some similarity to the Philharmonic. There were seven
short wave bands (1.7 to 64MHz) and two other ranges from 140 to 395
KHz and 520 to 1710 KHz. This set utilized two separate tuners on the
same chassis, one for the short wave bands and the other for the
broadcast and low frequency bands. The performance of the Scott
Special High Fidelity Communications Receiver was not equaled until
years after World War II."

I got kaito KA1103 yesterday. The radio is very nice and I think I will be happy with it's performance. I bought from Kaito rather than from Degen from China. It came with a free loop antenna which I have not yet tried. And maybe less hassle if I have to return for repair.

SSB worked nice with I think BFO and all in all a nice little radio with many features. I would probably Take Buzzygirl's good advice and buy from Degen and save some moola next time.

Been charging for eight hours after I ran totally dead last night, so hope it plays for a while tonight.

Nice radio, I'm sure you will gets lots of enjoyment. Really amazing
number of features and performance at that price.

I gave up fiddling with the timer and switched to a wall wart charger
and 2 sets of NIMH batteries. It senses when full charge is reached
and shuts off.

Hmmm...let's see now. You say Bush "took the fight to the enemy". As I recall, 15 of the 19 9/11 bombers were from Saudi Arabia.

So, when did Bush invade Saudi Arabia?????

Oh. What's that you say? He was "protecting us"? From what? The non-existent WMDs that the Administration admitted (in Dec '04) did not exist. Those WMDs?

Oh, wait, I know. Maybe you mean he was going to "protect us" from Saddam because Saddam was a "bad guy" for killing tens of thousands of innocent Iraqi civilians.

Please pay no attention to the fact that on a nationally televised press conference, Bush admitted to killing 30,000 innocent Iraqi civilians.

As you can see I am not looking for anything obscure, just a better variety of music. Everytime we are in NY or France we are rejuvinated with the radio. You know when you hear a song that you love but you haven't heard it in ages, and you turn to the person next to you and you shout, "I LOVE this song!"? Well, we never say that up here.
I am willing to give the Sony a try. I will purchase one in the next couple of weeks and dive in head first to it. Guess I'll figure it out through trial and error, like most things in life!
Thank you all so much for the help.

The stations you like in NY and Paris (I love Nostalgie, too) are not on SW
nor is there anything remotely like them on SW. You can find NRJ and
Nostalgie on the Internet... I don't know about the NY stations but I am
guessing they are there too.

Wow. You made me want to log onto Nostalgie and get my fix of Sylvie Vartan
Johnny Halliday, Marie Laforet, Gilbert Becaud and all the others.

I'll have to agree. You can find interesting music on shortwave, but we're talking Russian folk music and African pop. It doesn't sound like your taste in music is THAT eclectic, so Sirius has 12 channels each of practically every format you'd ever want to hear. Depending where you are in Canada, you may be able to receive FM from the northern US with the right equipment. I don't think that the Tivoli Audio Model One is still made anymore, but you can probably find one on ebay. Best FM radio ever built. Then look for a real FM antenna, not just a length of twinlead but something from C. Crane.

Right, and don't forget the khaliji that comes in so well in the afternoons....

Oh, and Mukesh in a blue mood. :- ((and you thought things in Canada couldn't be any more depressing)

I used to like listening to Radio Federacion out of Ecuador...they'd have a nice mix: you'd have your American or European techno/dance song followed by a solo instrumental on some three-string tribal instrument. I believe the content was aimed at the Shuar people (Jivaro)...you know, the ones who used to be into making shrunken heads...

Haven't heard R. Federacion in a long long time.

2617. Two other Alternative Methods of establishing and using an RF Ground with a 'portable' AM / FM Shortwave Radio

Newsgroup: rec.radio.shortwave
Date: 2006-04-26 05:59:22 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146031162.915323.156880@e56g2000cwe.googlegroups.com>
Source record: 71825

For One and All,

Here are Two other Alternative Methods of establishing
and using an RF Ground with a 'portable' AM / FM Shortwave
Radio; that has NO External Antenna Input or Identifiable
Ground Connection.

BATTERY TERMINAL :
Most of the Times the Negative Terminal (Side) of the Batteries
is the Chassis Ground of the Radio and is both Power Ground
and the RF Ground. If this is the Case then a Washer with a
short piece of Insulated Wire soldered to it can be used as an
easy RF Ground Connection for the Radio.

CASE SCREW :
Check the Case Screws with an Ohm Meter to the Ground
Side if the Radio's Circuit. Usually one of the Case Screws
will be connected to the Chassis Ground of the Radio.
Remove the Case Screw and wrap the striped end of a
short piece of Insulated Wire around it; then re-install the
Case Screw. This Wire is now your RF Ground Connection
for the Radio.

when all else fails - think of the possibilities ! - iane ~ RHF
.

2618. Phantom "X" Antenna -vice- Dual Dipole Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-04-26 07:57:00 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146038220.372905.20660@u72g2000cwu.googlegroups.com>
Source record: 71826

For One and All,

Considerations in modernizing the Phantom "X" Antenna
-vice- the Dual Dipole Antenna with a two sets of Elements
one Long and the other Short.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9222

First - Phantom "X" Antenna for Shortwave Listeners (SWL) {Modernized}

* All four Arms of the Phantom "X" Antenna are Equal.
* The Arms are positioned equally around the Center of
the Antenna.
* The Phantom "X" Antenna requires Five Support Points
the Center and Four Corners.
* A Coax Cable would replace the Twisted Pair feed-in-line.
* A Three Winding 9:4:1 Matching Transformer would be used
with two Antenna Windings (9&4) and One Coax Winding (1).
* The opposing Sets of Arms of the "X" would be connected
across (one each) the Antenna Windings with one Set of Arms
across the "9" Winding and the other Set of Arms across the
"4" Winding.
* The Coax Cable would be connected across the Coax Winding (1).
Note - Matching Transformer : Antenna Winding (9) 30 Turns and
Antenna Winding (4) 20 Turns plus Coax Windings (1) 10 Turns

Second - Dual Dipole Antenna for Shortwave Listeners (SWL)
* The Dual Dipoles Arms are cut for two different Shortwave
Bands with one set natually being Longer and the other set
being Shorter. Skipping a SW Band usually works better.
49 Meter and 31 Meter Bands {Skip Over 41 Meters}
41 Meter and 25 Meter Bands {Skip Over 31 Meters}
31 Meter and 19 Meter Bands {Skip Over 25 Meters}
* The Dipole Antenna requires a Center Support and two
End Supports.
* The Longer Arms are Rigged Horizontal [Flat] and the
Shorter Arms are Rigged at a 30 Degree Angle [Sloping]
out from the the Center of the Antenna.
* A Coax Cable would replace the Ladder Line feed-in-line.
* A Two Winding 4:1 Matching Transformer would be used
with an Antenna Windings and a Coax Winding.
* The Long and Short Sets of Dipole Arms would be connected
across the Antenna Winding.
* The Coax Cable would be connected across the Coax Winding.
Note - Matching Transformer : Antenna Winding (4) 20 Turns
and Coax Windings (1) 10 Turns

phantom or dipole - what are your thoughts - iane ~ RHF

TOM,

"All Waves" Spherical {Metal Ball} Antenna an all around Isotropic
Radiator :o)
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9223

Many years ago they used to sell an "All Waves" Spherical
{8"-12"Metal Ball} Antenna that was designed to be mounted
ona Pole outside the House or above the Roof and connected
with an Insulated Wire going down to the Radio. It was just
a 'gimmick' but it looked so cool and so round like a big silver
balloon or may be even a Fat Round Space Ship . . .

Isotropic Antenna :
The Isotropic Radiator, is sometimes referred to as
the Hairy Ball Problem.

Hi,

You should get an audio cable that fits your computers line in or
microphone jack and the other end to the headphone or line out jack.

You can download software such as JVComm32 which also
decodes RTTY, NAVTEX and SSTV.

When you tune to the frequency tune DOWN 1.8 MHZ and always use USB
mode.

I'va alwats used this method even wth inexpensuve portables such as a
Radio shack DX-440 and the results were satisfactory.

To find frequencies you can look up in a Google search and you will
find a
download from the USCG with worldwide fax stations

Hope this helps

You are a dork. If the cabinet is all plastic it's because it ain't
suppose to be grounded. Only ground the external antenna input. Your
obsession with ground is borderline pathological.

To begin, cuhulin, if you want me to stop publishing these virulent anti-Chuck Harder diatribes, call him up and convince him to retire from radio.
I know you won't do that, so here goes with another anti-Chuck Harder rant.
Re Michael Savage:
1) Michael Savage doesn't believe in UFO's or extraterrestrials like Chuck Harder does;
2) Michael Savage doesn't shake his fists at imaginary black helicopters like Chuck Harder does;
3) Michael Savage doesn't call President Bush a "dictator" - and Bill Clinton the "antichrist" - like Chuck Harde does;
So who's the better talk show host? Who's the sane one here?
My money goes with Michael Savage, warts and all.

OK, I'll bite...
How do you get the "modified plug" to stay in the socket once you remove the
only part that keeps it in there? Sounds useful, yet at the same time
worthless...

I have a table radio that's pretty much all noise, all the time on
MW, where I am. Ferrite rod antenna, and no real provision for ground.
I connected an earth ground to the sleeve nut on the headphone output
jack and that quieted things down dramatically.

Works on some of my other receivers as well.

I have a Panasonic RF5000 and all the SW bands are dead. They only get images from local FM stations. BUT..... yesterday when it was left on all day on SW, when I returned home, the SW was working! Today, its been on an hour, still nothing on SW bands. Touched all the parts with my hand, on the inside, to see if it was something loose, and it's not that. Maybe a common oscillator cap that goes bad? Appreciate any fixes. Please Post reply to this group or email, thank you,

Lisa - I got me one. It works very well on *one noise at a time.* It works best on noise that is constant and identifiable from moment to moment, like a running motor or whine, or crackling streetlight, that comes through the antennas. For intermittent noise, like distant lightning, it is tougher to tune.

It is *very* effective at "nulling" an AM station to make reception of weaker stations easier.

It requires two antennas. It works with the little built-in antenna and whatever external antenna you use for your radio, especially on the tropical bands (I have no idea why *this* is), but far better across the board if you have two external antennas, both of similar size, design and height, separated by about 1/4 to 1/2 wavelength.

The inexpensive pots are a little fussy, and you will find that on the main antenna pot, tuning often places you within the same 5 degrees of rotation - meaning that the pot gets a little dirty and scratchy at that spot. A quick blast of DeOxit internally used as directed (I'd recommend using the stuff for potentiometers, but I've used the othe type too with no problem) will solve this problem for a long time.

It has been a great help to me. It cleans up medium to strong signals beautifully, and often makes the weaker ones readable. It is not a panacea. Some people have stacked them (or similar units by other manufacturers) and have had good luck. Personally, I have misgivings about putting too much equipment between the antenna and the radio, but in this case, one works pretty well. This thing plus a good noise blanker on your rig will take care of almost any noise.

Good luck!
Bruce Jensen

One may be farther to the right of right wing or otherwise wackier than
the other but who knows. From what I've read so far the difference is
of little real consequence. Sort of like picking the dictator with the
worst human rights record between Idi Amin, Charles Taylor or Moamar
Gadhafi.

As a former owner of one of those wonderful receivers, my first guess
is to check the connections on that frame antenna. Next would be
crudded up band switches. Try a bit of non-lubricating tuner cleaner
on the contacts and see if the problem goes away.

It looks to me like a garden-variety bow-tie dipole. It would perform like
a simple dipole, just a little more broadbanded.

Tube radios need static protection, too. The input coils open up, even if
the tubes remain unharmed.

Yes, I connected it to my earth ground system. Multiple 8 ft ground rods driven into the yard circling the house, bonded together with a 4" strap, but not completing the circle. I use it for both the audio system and the radio system.

But for a single table radio, I could easily (and have) use the cold water pipe entering the building. It comes in under the foundation, copper from the meter at the street, and running about 60' to the building at a depth of about 8 feet.

More than enough for a table radio.

I have the ANC-4 (7 of them combining 8 antennas). The device
is very handy, and you'll wonder how you got along without it,
if you have 2 antennas to work with.

Basically you've built a phased array, and can steer a null
anywhere.

In the case of skywave interference, where you want to null a
distant station, the antennas have to be _closer_ than a
coherence length, which is more or less the wavelength divided by
the spread in angle of arrival of the signal. A local interfering
signal has no spread and so there's no such constraint.

A quarter wave separation is good for starters.

If you combine a loop and a whip, you can co-locate them and
dispense with the separation entirely.

On its face that statement does not make a lot of sense. Engineering is applying mathematical and scientific concepts to an application. You could use a spoon as a shovel for digging a trench but it would not work well. An antenna is designed for a purpose of receiving of transmitting on some range of frequencies and it generally won't work well in other applications.

If the assumption is correct about the elements being the same length
then yes. This is my assumption based on the picture.

I mostly agree with your assessment that you would have a comparatively
broadband dipole performance but in my experience this antenna generates
more signal voltage then that assumption of performance would indicate.

The greater broadband performance over a dipole come from the elements
appearing larger in diameter electrically, which more effectively
couples it to the space around it.

Yes, but the solid state units are more easily damaged by the high
voltage than the tube units.

I have to disagree. I get plenty of music on short wave other than
Russian folk music and African pop. Radio Netherlands last weekend
played classical, Radio Japan contemporary pop, rock, punk and
and Cuba has their own stile just to mention a few. Various Island
ethnic music from Radio New Zealand. Radio Australia with old rock,
contemporary, punk, country western. Then there is All India radio. If
you want to hear something different your best place to hear it is short
wave.

Dear Ms. Amy,

In my opinion the best source for "how to listen to shortwave" is the book PASSPORT TO WORLD BAND RADIO by Larry Magne; it is available very inexpensively from Amazon.com as well as other dealers. It is published yearly in October so you might want to wait for the next edition unless the money involved (less than $20.00) is not a deterrent. I buy it every year.

Another most useful book which I also buy yearly is the WORLD RADIO-TV HANDBOOK, also available from Amazon.com and other places. This is particularly useful for station information, both Medium Wave (the regular AM band) and Short Wave (and FM and TV to boot).

The most convenient and up-to-date sources for station schedules are on the web: PrimeTimeShortwave, the ILG, Eibi, and a few others. RadioIntel.com is an extremely useful site which, among many other things, has lots of links to useful radio sites.

I do not know where in Canada you are located, but the Sony ICF-SW7600GR is particularly sensitive on the Medium Wave band. If it is necessary to "enhance" its MW reception, I have found that a Select-A-Tenna (available from C. Crane Company and other dealers) is quite useful, especially if the radio and the Select-A-Tenna are put on a "lazy susan." This allows the "directional" characteristics of the radio and the antenna to be maximized. You should be able to hear the stronger NY radio stations if you live in the east of Canada or its mid-west.

Radio France (in English) is an easy "catch" though generally only in the daytime or in the middle of the night.

If you like music, there is no end to it, especially exotic music on the "tropical bands" (4750 - 5025 kHz) and from some of the African countries.

I think that, with this radio and the FM transmitter I mentioned to send the signals to your stereo, you will find an abundance of stimulating and thought-provoking broadcasts.

I wish you the very best of luck.

Joe

Yeah, that was one of the cheapo Halliscratchers that didn't use a line transformer. Also tons of fun for outdoor people who touch the antenna.

This thread has been an interesting lesson in perspective, huh? When we the shortwave group heard that Amy loved "foreign radio stations", I think we all naturally thought that she had in mind the sort of programming that we in this group tend to enjoy: Radio Netherlands, V. of Vietnam, Radio Transoxiana...or take your pick.

I don't think that NYC top 40 stations came to mind, although I suppose that, given the existence of an international boundary between NYC and her location in Canada, such stations are "foreign radio".

In any case, given the sort of thing that she's wanting to receive, there are probably better options out there for her than shortwave radio, even if there is the chance that she might in some odd instances stumble across a transmission of the type of music that she enjoys.

Also, her interest is exclusively in the music...and, let's face it, if she has even a remotely discriminating ear, then the type of audio quality that can be expected with a shortwave transmission is likely going to disappoint. Sure, we in this group love shortwave, and many of us enjoy listening to music over this medium, despite its very audible limitations.

Interesting how web oriented our society has become!

Sorry, no web link---but it was on ABC, NBC, CBS, NPR, your local radio and TV newscasts to say nothing of newspapers like the Detroit News and the WSJ. It was so commonly and widely distributed at the time, didn't think there was a need for a stinkin' web link. <g>

> Actually we attacked Afgahnistan first, you know, where Bin Laden was.

"Was"--you got that right. Where we didn't send in enough troops, left it to the local war lords at Tora Bora to do it for us and OBL just faded into the woodwork.

> Saddam was just next in line.

"Next in line"? Why and for what? You are talking in circles here. As stated above, "next in line" just because Bush said he was a bad guy for killing innocent Iraqis? (and then W proceeds to do the same). I hope you at least appreciate the irony here!

>And Iran is bucking for the next.

Yeah, Iran!

That's the ticket!!

We've done such a heckuva job in Iraq, it's on to Iran...

Q (March 13, 2002): Mr. President, in your speeches now you rarely
talk or mention Osama bin Laden. Why is that? . . .

Bush: So I don't know where he is. You know, I just don't spend that
much time on him , Kelly, to be honest with you. . . .

Q: But don't you believe that the threat that bin Laden posed won't
truly be eliminated until he is found either dead or alive?

Bush: Well, as I say, we haven't heard much from him. And I wouldn't
necessarily say he's at the center of any command structure. And,
again, I don't know where he is. I -- I'll repeat what I said. I
truly am not that concerned about him. I know he is on the run. I was
concerned about him, when he had taken over a country. I was concerned
about the fact that he was basically running Afghanistan and calling
the shots for the Taliban.

I think that it's safe to assume that the previous poster's words "we're talking Russian folk music and African pop" were meant as a "for instance", not to say that this is all you're going to hear. The lady is interested in Top 40, and her husband in French pop and "nostalgie". That's pretty specific. They're likely to find better options than shortwave for hearing this sort of thing; and I think that was the point that the previous poster was trying to make.

Radio Netherlands last weekend
> played classical, Radio Japan contemporary pop, rock, punk and
> and Cuba has their own stile just to mention a few. Various Island
> ethnic music from Radio New Zealand. Radio Australia with old rock,

> wave.

Shortwave is an excellent medium through which to hear a pretty wide sampling of music from a variety of music genres/traditions. If one's interest is specifically to one or two types of music, however, and not in much into the other things shortwave has to offer, then shortwave is probably a less than optimal choice. A die-hard Bollywood fan, for instance, would be ill-advised to go out and purchase a shortwave radio for the sole purpose of pursuing a passion for Hindi film songs. There would be multiple disadvantages: audio quality of AIR on shortwave can be pretty substandard, there would be limitations as to where one could receive such programming (you're unlikely to pick it up in the office or while jogging), timing would be a major disadvantage (you can just turn on your radio any time of the day and expect it to be there). For such an individual, various better options exist: internet radio, downloading music from the 'net, or purchasing CDs, etc.

In Amy's case, since her listening interests are more mainstream, satellite radio does offer some of what she's wanting: you can find the top-40 content; the content of Sirius's French-language music channels might disappoint, though, since I believe it's primarily music by French Canadian artists.

PHC,

HOW TO - REMOVE THE TIP OF THE 1/8" MONO-PLUG :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9133

Use two Pairs of Pliers to carefully remove the End-Tip
from the body of the 1/8" Mono Plug.

Oops - Some people just use a Pair-of-Diks and snip-it-off :-(

Next - Ever-so-Gently -squeeze- the Barrel
and deform it 'just enough' (into an Oval)
to make it a "Pinch-Fit" for the 1/8" Jack.

yes it is that easy - iane ~ RHF

Guys, my head is reeling! I also posted this question on an Apple forum (I am a mac user) and I too have been sent to Short Wave by them. But we are looking to ROCK THE HOUSE and feel like we are home again. The broadcasts need to be clear. I am in Montreal, so the NYC stations are not far. It's the France ones that will be harder. we are specifically looking to hear live broadcasts from our respective hometown stations, not just good music but the feeling of being home too (we've been here 11 years, you'd think we'd be over it by now!). I am fearing my best bet is to just do it through the computer via the internet. My hesitation is just over-using my Powerbook which is vital to my job. Maybe I can buy a cheap second hand computer or laptop to hook up the internet to the stereo speakers...

In *theory*, I agree with you...but from a *practical* viewpoint, I don't see why Al Quaida would want to wait five years (give or take) for Iran when there is no doubt all kinds of nuclear stuff from the former Soviet Union floating around and available right now...

I thought she wanted broadcasts in French for her husband.

"My husband is from France and he too is dying with the radio."

"I am, however, very interested in the Sony ICF-SW7600GR."

"We will only be looking to pick up major NY and major France stations,
no obscure stuff."

Based on these quotes and by golly the fact that she posted in
rec.radio.shortwave, I would make the assumption that she is actually
interested in short wave reception.

Now I know it will be a novel concept to some that posting here
indicates an actual interest in short wave but its true!

You are supposed to post news and information germane to the news
group. This might be a hard fact for the satellite Trolls to swallow
but that is how Usenet is supposed to work.

David - "Dork" - You Want Dork ?
DaviD - You Can't Handle Dork !

David - I have been very specific, Specific. SPECIFIC !

First Stating the basis {reason} for using the Modified
1/8" Mono Plug for a 'portable' Radio's Ground Connection.

1 - Modified 1/8" Mono Plug for a 'portable' Radio's Ground
Connection
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9097
As you have discovered, most of the time a 'portable' AM / FM
Shortwave Radio's Earphone Jack is also coupled to the Radio's
RF internal circuitry and is also RF Signal Ground.

2 - So starting with a low cost 'portable' AM / FM Shortwave
Radio with a Plastic Case that does not have an External
Antenna Input or an Exposed Ground Connection.
NOTE - Not designed to use with AC Power; so the Radio
simply runs off a set of Batteries. Although the Radio may
have a Jack for an External {WalWart} DC Input.

3 - NOTE - This idea and application is mainly for 'portable'
AM / FM Shortwave Radios that do not have a built-in
External Antenna Input {Jack} that offers a Grounding
"Attachment" Point for the Radio.
- - - Be Advised - There are exceptions and ymmv.

4 - The Premise "IS" - So starting with a low cost
'portable' AM / FM Shortwave Radio with a
Plastic Case that does not have an External
Antenna Input or an Exposed Ground Connection.
{ Using the Whip Antenna and Battery Power Only }

5 - Here are Two other Alternative Methods of establishing
and using an RF Ground with a 'portable' AM / FM Shortwave
Radio; that has NO External Antenna Input or Identifiable
Ground Connection.

david - 'there is an exception to every rule'
-and- that itself is a rule ~ RHF
.
David - If A Dork I Be - A Dork I Be ~ RHF

Sorry for misunderstanding what you wanted. You were sent to the wrong
place unless you are interested in broadcast band or short wave
listening. You have two choices other than short wave and that is XM,
Sirius satellite or streaming Internet.

Why are you afraid of Internet streaming? You have OSX and it
multitasks no problem so you can work and stream at the same time. That
is what I do. Do you have a low bandwidth connection? Why don't you use
Itunes radio? Maybe they don't have what you want?

How about this streaming link
<http://www.440.com/440satx.html>

Another streaming link
<http://www.live365.com/stations/easye12>

To find radio station links use this. If the station has a web page this
will find it and you can go there looking for a stream link.

So I want to Rig my cut-to-order Dipole Antenna to use
for general across-the-bands Shortwave Listening.

First - Don't Think of It as a Dipole . . .

Think of it as Two Horizontal Wire Antennas that are fed
with a Pair of Matched Lines {Ladder Line - Twin Lead - etc}

Second -Taking the two (a pair of) feed-in-line Wires and Connecting
them together at the HI-Z (500 Ohm) Terminal of my Radio / Receiver.

Third - Then . . .

- - - to be continued ~ RHF

No need to get so defensive, pal. I, too, initially had the idea that she was into the type of international broadcasters that are heard on shortwave. Subsequent messages indicated that shortwave is likely not her best option, given what she's wanting to hear.

Just because you'd be willing to die in a crumbling skyscraper doesn't
mean the rest of us would. President Bush knows this and is protecting us.

I'm glad idiot Al Gore wasn't able to steal the election from Bush. Can
you image having to listen to him week after week on how we must accept
terrorist attacks? He might fire off a few cruise missles at asprin
factories like Bill Clinton did but only if a tree wasn't hurt.

That's why me and my conservative friends are going to insist on a secure border. It doesn't do any good to talk about what to do with the illegals that are here when there are new ones arriving every day.

I propose the "Great Wall of America", much like the Great wall of China, and we can use cheap Mexican labor to build it, a real Win Win situation.

Yeah, I think that ultimately, 'net radio would be their best option
(though she doesn't seem to like it).

After all, they're wanting to actually listen to their favorite
"hometown stations" and feel like they're back home. Satellite radio
isn't gonna give you that feel, even if a channel or two happens to
play desired music.

((Another option, of course, would be for 'em to leave Canada and
resettle in one or the other's hometown))

2714. MARS DYING?

Newsgroup: rec.radio.shortwave
Date: 2006-04-27 00:20:20 UTC
From: Rayburn <rayburnsweet@alltel.net>
Message-ID: <cb9eb$44500e44$8b3717aa$27342@ALLTEL.NET>
Source record: 71921

ARMY MARS just put out info that their main purpose in life has
ended...Sending info to the Joint Chiefs of staff...."JDOMS".

JDOMS has just sent out info they dont want it anymore....since this was the
only remaining purpose of MARS I wonder whats on the horizon?

BTW I overheard on the air KY MARS is down to 4 members now

Below is a copy of the message I just got off the net
UNCLASSIFIED

DE AAA9A NR 021

P 262110Z APR 2006

FM CHIEF ARMY MARS/AAA9A AZ

TO ALL ARMY MARS SMDS

INFO ALL ARMY MARS MEMBERS AND STATIONS

ZXX CMD DIRECTORS/AREA COORDINATORS

BT

SUBJECT: CAM 21-06 EEI PROCEDURES AND CUSTOMER BASE

1. EFFECTIVELY IMMEDIATELY, WE WILL NO LONGER FORWARD EEIS TO JDOMS.

JDOMS HAS REQUESTED WE DISCONTINUE DOING THIS, SINCE THEY NO LONGER

REVIEW AND FORWARD THEM TO OTHER AGENCIES. ACTUAL EEIS CAN STILL BE

SENT TO HQ ARMY MARS TO DETERMINE IF THE INFORMATION SHOULD BE SENT TO

OTHER ORGANIZATIONS.

2. REQUEST SMDS COORDINATE AT LOCAL/STATE LEVELS TO DETERMINE IF THERE

IS A CUSTOMER BASE FOR EEIS OR SOME FORM OF INFORMATION. I WILL BE

COORDINATING AT THE NATIONAL LEVEL TO DETERMINE ANY NEEDS/REQUESTS FOR

INFORMATION.

3. REQUEST INPUT BE PROVIDED TO AREA COORDINATORS NLT 9 JUN WITH INFO

ON ORGANIZATIONS EXPRESSING INTEREST AND WHAT TYPE OF INFO THEY

REQUIRE.

SIGNED KATHY HARRISON, CHIEF ARMY MARS

Well, does a reference from the Whitehouse and the W's own lips count?

http://www.whitehouse.gov/news/releases/2005/12/20051212-4.html

which states:

> THE PRESIDENT: How many Iraqi citizens have died in this war? I would
> say 30,000, more or less, have died as a result of the initial
> incursion and the ongoing violence against Iraqis.

Hope you didn't bet too much money on it, cuz I would bet that you lost
the bet...

(tip o' the hat to jfeng)

P.S.
Interestingly, the circle is complete and that brings us back to the
original contention---

Saddam: tens of thousands innocent Iraqi civilians dead = ???
Bush: tens of thousands innocent Iraqi civilians dead = ???

My old CBS-TV (at the time) alma mater in Detroit has a 1000 foot tower. Maybe 7 or 8 years ago, they put up such a device on the top of their tower. It may be a little different than what you are thinking of as this device did not have discrete points per se; rather, it has been described as looking like a large ball of *very* coarse steel wool.

Bottom line is that they are very happy with it. They have not had a damaging lightning strike since installing it, whereas the other two nearby VHFs have had several damaging hits in that time frame. It seems that the only downside is that after big lightning storms, the ground beneath the tower sometimes is littered with pieces of the "steel wool". More details to follow when he gets back and if I remember to ask him...

In the meanwhile, try doing a search on "crown of thorns" + lightning, but I don't have the exact name as my former co-worker who is familiar with this device is out of town for another week or so.

Lisa,

The stock MFJ-1026 is very good for noise cancellation purposes. But if you want to use if for MW phase cancellation you'll need to do some modifications to get it to work well in the MW band. Many years ago, I had Al Merriman modify my MFJ-1026 to work in the MW band and have never regretted it. It really is very good for its intended purposes.

Did you want to use the unit for phasing or noise cancellation? If you want to use it for phasing then you may also want to look at the Quantum Phaser. I own one of these and have found it to be an excellent phasing unit.

As Bruce has noted, if you want to do noise cancellation you will only be able to cancel one noise source at a time with one unit.

I have also owned an ANC-4 unit but found it not to be as good a unit as the MFJ-1026. I know Ron Hardin prefers the ANC's and doubtless he put them to good use at his location. YMMV depending upon your location.

Help! I can't decide which to try. There are many preselectors to choose
from. Even MFJ has several from which to choose:
956....looks simple. inexpensive. work well????
1040C..looks complicated. more$$. amplified
1045C..don't see much if any difference than with 1040C
1046...passive not real cheap
Then there's the 1020C ACTIVE antenna that Passport says makes a dandy
preselector if you take off the whip.

SHEESH! I don't have a clue which to try.
What I am attempting to accomplish is to weed out the 50kw blowtorch down
the street and keep out unwanted 2nd and 3rd order images out of my beloved
but cheaper single conversion valve jobs.

I feel the need to cross-post this to a few places to get multiple opinions.
YOURS would be appreciated...

Or even better, just throw some alkalines in it. That would only work if you didn't use it for hours a day. If you're a heavy user, then you probably have standard NiMH batteries lying around anyway. I find that my 1102 eats batteries pretty badly, even though I only use it for an hour a day or so.

Not sure it is better than having the lightning not hit at all. I've been using the "witches broom" on my towers for years and never a hit or close call.
DC grounded antennas are a nice 2nd feature, as are grounding all legs of the towers, Polyphasers and complete disconnect- all of which I have. But the broom is the best first line of defense I have found.

LK,

The only reference that I found was :

Davis RF's lineup of Lightning Protection
components includes:
"The Porcupine" Lightning Dissipator
http://davisrf.com/ham1/lightng.htm
Lightning & Surge Protection "Porcupine" Lightning Protection
- Dissipates Ionization - Part Number WM874

DAVIS/ORION Marine Wire & Cable
Mast Head Lightning Protection
http://davisrf.com/marine.htm
Mast Head Static (Ionization) Discharge "The Porcupine"
to lessen danger of Lightning Hits or Static Build-Up on
Mast or Flying Bridge. Such Ionization Build-Up enhances
the chance of Lightning Strikes and also affect Electronics
and Engine Electrical Systems.

Regarding the passive units, I've used both. I like the 1046; it's a nice unit. A bit more fussy to get on the sweet spot than the 956, since the bandwidth is narrower on the 1046.

The 1040C and 1045C are similar in that they're both amplified preselectors. The 1040C allows for use with a transceiver (hence, the delay knob on the front). Also, the 1040C, unlike the 1040C, allows for use with two separate antennae and two different receivers, with buttons on the front for switching between antennae 1/2 and receiver 1/2. The 1045 does not allow for a two antennae & two receiver set-up that way, although I believe that some of the online descriptions wrongly state that it does. One nice thing: the 1045 allows for battery operation with a 9V battery. I use my 1045C fairly frequently. The amplifier is fairly decent...it actually does produce a better signal to noise ratio from time to time, and can also attenuate a signal (that is, attenuate the signal from the strength level it would be if the unit were bypassed altogether) when turning the gain knob from the 12 o'clock position in the counter-clockwise direction.

I've called MFJ before and asked if there was much of a difference between the 1045C and the 1020C active antenna. From appearances, they seem much alike, with the exception of the fact that the 1020C has coverage from 0.3 to 40 MHz and includes a whip, while the 1045C has coverage from 1 to 54 MHz and no whip. From what I was told by the MFJ fellow, it's advisable to get the 1020C if you're primarily wanting an active antenna, but that if you're specifically needing a preselector, the 1045C better performs this function (well, I guess that's why one

is marketed as an active antenna and the other a preselector, huh?)
:-)
In any case, I find that the 1045C can work just as well as an active antenna if you give it a decent length of wire (20 feet or so...kinda like what PWBR suggests for the 1040C...it's a pity that PWBR doesn't do some reviews of these sorts of accessories, along with the receiver and antenna reviews).

Regards,

Junius

I'm trying to get an R-4B xtaled up for SW also. Jan is quite a bit cheaper than International but still $17.95 ea. but said they could cut any that I wanted. I've picked up a few used ones but they are far and few between. I also found a fellow who had reproduced the R-4 dials and the last I knew he had two left after I purchased mine ($20). I haven't installed it yet but it looks great and is like the original R-4, it has markers every 5Khz instead of the 25Khz markings on the B. If you are interested in the dial I'll see if I can still come up with his telephone number. RM~

PS, If you come up with any duplicate xtals, I'm interested.

SC,

In the end it is 'The Will of the People" that must be heard
and heeded :

Whether it is President George "W" Bush in 2000 and 2004.
http://en.wikipedia.org/wiki/Gw_bush
- - - It is the Citizens of the USA who get to decide
who represents them [.]
Not some group of Liberal Elitist who know what is right for them
because they are the un-informed masses who must be guided.

Or Mayor Ray Nagin in 2002 and now in 2006.
http://en.wikipedia.org/wiki/Ray_Nagin
- - - It is the Citizens of the City of New Orleans
who get to decide who represents them [.]
Not some group of Liberal Elitist who know what is right for them
because they are the un-informed masses who must be lead.

The 'other' Mayor run-off Candidate is Lt. Gov. Mitch Landrieu
who represents the State's corrupt Democrat Party Machine.

JH,

AM/MW PROBLEMS ? - IS IT THE RADIO / RECEIVER ?

What Radio / Receiver are you having this AM/MW Bleed-thru
problem with . . . ?

If this is a Radio is run with just the Built-in Whip Antenna
and the built-in AM/MW Ferrite Rod Antenna - With-out the
external Antenna do you still get the AM/MW Bleed-thru
problem ?

If this Radio can be run on Batteries "Only" and "Only" using
the Built-in Whip Antenna and the built-in AM/MW Ferrite Rod
Antenna - With-out the external Antenna do you still get the
AM/MW Bleed-thru problem ?

If this is a Receiver that does not have a the Built-in Whip
Antenna and the built-in AM/MW Ferrite Rod Antenna :
Using just a Scew-in-the-Back (SO-239) 72" Whip Antenna
-OR- Banana Plug in the Center-Pin of an SO-239 Jack with
a 72" piece of Insulated Wire for a Whip Antenna - Then Do
You Still Get the AM/MW Bleed-thru problem ?

With these basic Built-in Radio Antennas -or- these short
Back-of-the-Receiver Antennas : "IF" You are getting
AM/MW Bleed-thru then IMHO the probelm is in your
Radio / Receiver.

RE-EXAMINE THE ANTENNA SYSTEM LAY-OUT

RE-EXAMINE THE GROUND SYSTEM LAY-OUT

RE-EXAMINE THE COAX CABLE SYSTEM LAY-OUT

MY THOUGHTS ON PRE-SELECTORS :

Will it be used just for Shortwave Listening (SWL) "Only"
with a Radio / Receiver and not a Transmitter ?

* MFJ-1045C SWL Receiver Pre-Selector with built-in Amplifier
which covers the Shortwave Bands from 1.8 to 54 MHz.
http://www.universal-radio.com/catalog/preamps/0807.html

-Or- Will it be used just for both AM/MW Broadcast Band
and Shortwave Listening (SWL) with a Radio / Receiver ?

* MFJ-1020C Indoor Active Antenna covers 300 kHz to 40 MHz
(LW, AM/MW and SW Bands) in five bands; and when used with

an External (OutSide) Antenna, the MFJ-1020C functions as a
Pre-Selector.
http://www.universal-radio.com/catalog/sw_ant/1413.html
Another 'alternative' would be the Palstar AA30
http://www.universal-radio.com/catalog/sw_ant/1492.html

Are you using this with a small to moderate size (long)
Antenna ?

* Think Active Antenna {Amplified} Pre-Selector like
one of the above MFJ Products,

-OR- Are you using this with a Large (very Long) Antenna ?

* Think Passive Antenna {Non-Amplified} Pre-Selector
like the MFJ-956 - Long Wave, Medium Wave and Shortwave
Pre-Selector and Antenna Tuner. Coverage : 150 kHz - 30 MHz
http://www.universal-radio.com/catalog/preamps/2964.html

FWIW - If you are having problems related to AM {Medium Wave}
and you are already using a High Pass Filter (HPF) then may be
a Palstar MW550P Antenna Tuner - PreSelector - Amplifier should
get your consideration.

DG [N2CHI],

Silencing the Wall-Wart Hum ^ ^ ^ ^ ^ . . . . . _____
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9232
[AC-to-DC Power Adapter - Line Noise and Artifacts]

One assumes that you have eliminated the Wall Warts
one at a time and have determined exactly which one
that you are going to perform surgery on :o)

QUESTIONS ? :

1 - Is the Wall-Wart {AC to DC Power Adapter}
passing the Noise Down the Line ?

2 - Or is the Wall-Wart Radiating the Noise Itself ?

If the Answer is # 2 then the Capacitors may not fix
the Close Proximity AC Hum Problem.

If # 2 is the problem then try Shielding the
Wall Wart and test again for the AC Hum Problem.

IN AN OUT OF THE BOX {MAGIC} :
Most of the time it is not getting things apart that is difficult;
but the process of getting them all back together again in
that 'little box' .

ADD-ON ALTERNATIVES :
One alternative is to put Clamp-On Ferrite Core
on the AC Power and DC Output of any Wall Wart.

Note - Sometimes a small Donut Shaped Ceramic Magnet
about 6" from the DC Input Plug to the Radio can help.
Simply pass the DC Power Output Wires through the
Donut Hole 2-3 times.

2742. Transmitter splatter

Newsgroup: rec.radio.shortwave
Date: 2006-04-27 09:53:58 UTC
From: John Plimmer <plimmer@nospamtelkomsa.net>
Message-ID: <e2q4ccncc1@ctb-nnrp2.saix.net>
Source record: 71950

Many of you are unaware that transmitters emit splatter.
A bad transmitter on the HF shortwave spectrum can emit 12 kilohertz of splatter, that is 6 kilohertz of splatter either side of the centre frequency. Since the shortwave band has a channel separation of only 5 kilohertz, that means that such a transmitter will obliterate and interfere with signals either side of it on the 5 Khz separation.

Many of you may think that this interfering splatter is a result of poor filters on your portable radio, but this is not so. Even very expensive professional grade receivers with top of the line filters cannot get rid of the splatter, as it is inherent and is on the band.

On the BCB AM mediumwave band the situation is even worse as many transmitters will occupy a massive 30 Khz of space, severely disrupting reception of other stations either side of it. It is possible to observe such effects with the modern receivers that have spectrum scopes and also the new breed of computer radio's such as the Winradio G3 series.

What can be done to remove this splatter? Very little I am afraid. One of the only possibilities is to "phase" out the splatter with a device such as the MFJ 1025/6, but these devices also have severe limitations and will not work in every circumstance. Despite the glowing reports of some users with these phaser's, they will only work if the station you want to phase out is not too strong and also that the offending transmitter is at right angles to the transmitter you are trying to receive.

Secondly, the phasing works better the lower down the frequency spectrum you are, so on the mediumwave band it can be quite effective, but as you go up the band the effect is less noticeable, so that by the time you get up to about 6 Megahertz the phasers become almost ineffective.

The idea that antenna tuner's and antenna matching units will improve matters relating to removing splatter is also wrong. They will not improve that situation at all.

A better bet than tuner's and matching units for optimising signal strength is the simple 9:1 or 4:1 magnetic matching transformer. The 9:1 is suitable for the lower reaches of the spectrum and the 4:1 if you do more listening above 10 Mhz. I am sure RHF will rush to give you lots of leads on these very effective devices that do not require endless knob twiddling.

2 in series works. But let me ask-
does your station have a good RF ground?
Is the antenna input to the filter low impedance shielded?
Is it possible that the station, while meeting FCC specs, still has
harmonics that would be audible at your QTH?

If you'd like to see the actual differences between the two units, I suggest you go to the MFJ web site and download the free .pdf manual for each.

Well, I'm using RG-58 cable with connectors made for RG-8 soldered on the ends. Probably not the cleanest setup. Most radios aren't grounded. I don't notice any difference on the ones that are. This station comes in on just about everything that has an amplifier in it and probably a few things that don't! Sometimes it is terrible, other times it's not bad. 99.9% of the time after dark when they cut their power back to, I believe, 5 kw, it's not a problem at all.

If I worked nights, I'd be looking for a new hobby...

If the transmitter is exceeding its alotted bandwidth I don't see how
a better impedance match at the receiver will do anything but make the
offensive material come in better.

This is just a real-world artifact of analog broadcasting. In the USA
we must put up with it on MW from Mexican stations that are way too
HiFi.

You could always buy the offending station one of these:

Amazing isn't it. This is the guy who is supposed to be responsible for the well being of the citizens of New Orleans and he failed miserably during Katrina. When he and the governor were asked repeatedly to declare an emergency that would allow the feds to come in they dithered and waffled. He should have had emergency transportation set up for those who could not travel and yet he would not even put the local busses into service. All he could do was whine on CNN about a racist conspiracy.

I used Alkalines with the Sony that the DE1103 replaced. The
alkalines do have a greater capacity than NIMH's, but over time you do
run through a lot of batteries and the NIMH's are cheaper.

You should ignore the irrational rants from Steve-the-idiot. If you appled his nitpicking sophistry, you could also argue that Osama bin Laden never killed any Americans. This is clearly intellectually dishonest, but nobody ever accused him of integrity.

BTW, do you notice how frequently he mentions his "FA"? If he uses his A for F so often, he must be publicizing his personal preferences and advertising for partners.

The problem in a case like this is, or could be, that w/o a good RF ground
at the filter, the 50KW signal can "blow by" the filter in common mode on
the exterior of the shield.
The other problem of them being legal, but still strong enough to hear their
harmonics sounds as though is is still a possibility also.
Does your RX have a built in attenuator? Note how much the fundamental
signal is reduced when you switch in the attenuator. If this is IM, the IM
priducts should be reduced by more than the fundamental.

Dear Jim,

While I have always had problems at my location, none have been as serious as yours sounds. That said, one of the things that helped me greatly is a directional antenna. As you know the Wellbrook ALA 330S is highly directional and I'm able to "null out" the electrical transformer, the high tension wires, and the nearest street light (all of which are fortunately in the same general direction). (Unlike yours, my problems are mostly at night.) I'm not suggesting you buy one of the Wellbrooks (we've had that discussion before) but perhaps some sort of highly directional antenna might help you. You could inexpensively build a loop and see if it offered any improvement. If it did, you could build or buy a better one. A phased array (outdoor) setup might also be of use.

I do not think a "diversity" type antenna or a preselector incorporating same would be of much use unless BOTH antennas were highly directional. A VERY high-Q preselector would, of course, eliminate most of your problem (but would probably introduce some new problems of its own).

The MFJ 1020C would be a good place to start as it is relatively inexpensive and does indeed work fairly well. (I own a 1020 and a 1020B.) This, in combination with a directional external antenna, would probably help you greatly and at fairly small cost.

As always, I wish you the very best of luck.

Best,

Joe

An natural emergency like Katrina IS A STATE issue until the local
officials declare an emergency and ask for federal help. Governor
Frick and Mayor Frack sat on their thumbs and did nothing after the
feds were pleading with them to ask for federal help. Precious hours
were lost because because those two idiots forgot that a states rights
issue was involved and that they had to ask for federal involvement.
Both of them should have been run out of office for meglecting the
welfare of the citizens of that city so thoroughly.

That's urban myth. The NRP says if the event is obviously beyond the
scope of the locals the POTUS can declare an emergency and use every
asset at his disposal to provide relief. This includes the military,
except for law enforcement. Bush declared the emrgency the Saturday
before the storm.

The USCG was on the ground running an hour after the storm came
through.

It took helicopters from Fort Hood 3 days to fly 400 miles.

Whether Bush was flying over N.O., at the White House or at his ranch
in the first days of an emergency like that is totally irrelevant to
the important decisions that have to be made on the ground. The
outcome would not have been any different had he been flying in a NOAA
plane. Had the La. officials asked for help and gotten the military
involved EARLY they could have bailed that inept mayor out and helped
the population.

David,

What one does for a Commercial Antenna Structure
does not preclude taking a few simple and practical
measures (low cost) to help protect your Radios and
Equipment by Amateurs and Shortwave Listeners
(SWLs).

Maybe we need a List of the Ten 'simple-and-practical'
Things that Amateurs and Shortwave Listeners (SWLs)
can do to help protect their Radios and Equipment

Each Item must Cost under $25

Each Item must Take less than 2-Hours to do.

Here's one that costs nothing. Unplug your shit when you're not using
it. Don't use it during thunderstorms.

Always use grounded autotransformers on LF/MF/HF transmission lines.
Grounding blocks on the VHF. Unplug everything you hold dear when a
storm approaches. Phone. 'puter. Stereo. TV. Radios. Blender.
etc.

Giuliani?... Let's hope he is no Giuliani

Rosaleen Tallon, whose brother, also a firefighter, was killed on September 11, shouted at Giuliani: "Talk about the radios."

The radios she was referring to were the antiquated "handie-talkies" used by the fire department. They were the same equipment that the Fire Department of New York (FDNY) had used in responding to the terrorist truck bombing of the World Trade Center in 1993. They failed then, and, not surprisingly, they failed again on September 11.

Not only were firefighters on the 19th floor of the building unable to hear orders from their own commanders in the lobby of the north tower, but the fire department commanders had no ability to communicate with the New York Police Department (NYPD), whose members were responding to the same disaster. A police helicopter radioed to NYPD commanders that the building appeared about to fall. In response to this information, an evacuation order was communicated to police personnel on the scene. This report, however, never reached the fire department.

Similarly, 20 minutes before the south tower collapsed, a caller to the police department's emergency number reported that one of the top floors of the building was collapsing. While the information was relayed to the NYPD's commanders, it never reached the fire department, many of whose members were still in the tower.

Senior FDNY officials have testified that those watching the tragedy unfold on television knew more about the damage to the towers than fire chiefs directing rescue efforts from the buildings' lobbies. This lack of information helps explain why the death toll for firefighters was 15 times as high as that suffered by city cops.

Why didn't the city have a radio system that allowed firefighters to communicate with each other and with the police? Asked this question, Giuliani claimed that "technology" was the problem. "Those radios don't exist today," he added. No one on the panel bothered to challenge this incredible assertion.

Those who know the history of the fire department-including many of those who were in the audience-are well aware that the problem was not one of technology, but rather of political corruption.

Firefighter union officials called for a grand jury investigation into a $33 million deal struck several months before September 11 between the city and Motorola Corporation for the purchase of new digital

radios for the fire department. The no-bid contract resulted in the introduction of radios that proved grossly ill-suited for use by firefighters.

The model selected by the city was designed for intelligence agencies seeking encryption capabilities, something with no apparent use in emergency rescue operations or fire fighting. After the radios were introduced over the objections of department members, they had to be withdrawn in the face of repeated failures, some of them life-threatening.

The expensive new radios were mothballed, and the firefighters were stuck with equipment that was not only more than 15 years old, but was also incompatible with the communications system used by the police and known to be failure-prone in high-rise situations.

Suspicions about the peculiar Motorola deal were heightened by the well-known predilection within the Giuliani administration for steering city contracts to political supporters and allies. No one on the panel bothered to broach the sensitive subject of this contract.

While both Giuliani and the commission members sought to exploit the heroism of New York City firefighters to gloss over the city administration's responsibility for the problems that plagued the response to the September 11 attack, it was notable that not a single city firefighter was invited to testify at the hearing.

This was hardly an accident. Firefighters have repeatedly warned that the city is even less prepared now than it was three-and-a-half years ago to confront the kind of catastrophe that transpired at the World Trade Center.

Take the problem one step at a time. The local 50 KW AMBCB station
penetration could result from:

1. Common mode from the power cord.
2. Common mode from plugged in items like headphones.
3. Antenna coax leakage.

Unplug any audio cables and the antenna coax and see if you get any
images. If not then tune the radio to the blow torch station and see if
you can hear it. If you do try putting a 50 ohm resistor with short
leads across the radio input. If you still hear the station then try
ferrites on the power cord. If you don't hear the station then try
connecting the coax with a 50 ohm resistor (very short leads) across
where the antenna is supposed to go. If you get it then you have a coax
leakage problem.

2792. High Definition Radio like sideband

Newsgroup: rec.radio.shortwave
Date: 2006-04-27 20:39:38 UTC
From: Tom or Mary <tombates@city-net.com>
Message-ID: <4451186d$0$76292$4d5ecec7@reader.city-net.com>
Source record: 72050

Is high definition radio like sideband, in that the band is split so more than one signal can be sent? Or is it just that fact that is is digital, and they can send more than one signal. Would HD radios be able to pick up normal stations also?

Thanks

Tom

If the transmitter is exceeding its alotted bandwidth I don't see how
a better impedance match at the receiver will do anything but make the
offensive material come in better.

This is just a real-world artifact of analog broadcasting. In the USA
we must put up with it on MW from Mexican stations that are way too
HiFi.

You could always buy the offending station one of these:

I've been getting all kinds of advice from everyone wherever I
posted this question and I really appreciate everyone's replies but I guess
I wasn't too clear on my needs. I
shouldn't have even mentioned the blowtorch as it really isn't a problem.
IF I was at home during the day and wanted to listen to the shortwave, it
would be a MAJOR problem. Alas, I work for a living and am not home during
the day. I just mentioned that. Why, I'm not sure. What I was REALLY
wanting to know was if a preselector would help with blocking spurious
signals and images out of my older tube single conversion radios. Nothing to
do with the blowtorch. He isn't a problem in the evening after they turn
down the power. Again, I appreciate everyone's comments. I am learning
more than I could have hoped to.:)

I filed a comment with the CPUC directed to Commissioner CHONG.

I am aghast at the decision of the CPUC to go forward with a BPL
testing in California when trials of this technology have degraded
radio communications in other states. These trials have generated many
complaints of radio interference. This flawed technology is not
fixable. Currently there is no known way to keep the digital Internet
signal to the power line and prevent radio interference. Please
reconsider allowing BPL service in California until it can be
demonstrated that the service will not interfere with radio
communications.

Preselectors are OK ; they do block some stuff;
- however, it comes at a price of a few less decibels of input from the antenna

Buy the Cheaper MFJ unit; it will probably help the older tube sets.

http://www.mfjenterprises.com/products.php?prodid=MFJ-956

I had it , then upgraded to the 1046;
- which I have now disconnected..

Nice, but not mandatory

That looks like an excellent suggestion for Amy and her partner's musical
interests, technical capabilities and desire for pretty good stereo quality.
Many Internet 'radio' stations stream at 128 kbps and can sound quite
decent. If dropouts due to network congestion have not been a problem on the
Mac, then they should not be with this radio-like appliance.

2809. SWR closeouts at Radio Shack

Newsgroup: rec.radio.shortwave
Date: 2006-04-28 01:53:55 UTC
From: Beloved Leader <Kim_Jong_Il@volcanomail.com>
Message-ID: <1146189235.537888.57790@g10g2000cwb.googlegroups.com>
Source record: 72067

I went to my nearby Radio Shack today. Here's my report.

First of all, their website seems improved. It is much easier to
navigate.

http://www.radioshack.com/family/index.jsp?categoryId=2032073&cp=2032052

Grundig Mini 100 PE AM/FM/Shortwave Radio
Model: 100 PE | Catalog #: 12-830
Had been $29.99; is now $19.97.

Grundig FR200 Emergency Crank Radio (Yellow)
Model: FR200-Yellow | Catalog #: 12-480
The last two digits of the SKU vary according to color.
Had been $39.99; current price not specified, as it is out of stock.

Grundig AM/FM/Shortwave World Band Radio
Model: G1000A | Catalog #: 20-239
Had been $49.99; is now $39.97.

Eton Elite Series AM/FM/Shortwave Radio
Model: E10 | Catalog #: 20-237
Had been $99.97; is now $79.97.
This is interesting. The website says it is in store only. The .97
ending of the old price indicates it was already on clearance. The
current price of $79.97 means it is now in at least its second, and
possibly its third, price-cutting cycle.

2810. Re: Transmitter splatter

I find that the Radio Marti tx from Greenville (I think) on 6030 in the evenings NAm time really plays havoc with BBCWS West Africa stream on 6035 which is on between 0300-0400 UTC. Officially, it's not a problem because the two stations are broadcasting to totally different areas, but that's my best chance to get BBC news since the Americas schedule was eliminated. The other option, 7160, is plagued by Cuban bubble jamming meant for Radio Republica which was there B05.

John Plimmer wrote:

Only downside I see is that they don't tune to RA or WMA, just MP-3
stations.

>
> Where does that say that Bush killed 30,000 Iraqi civilians?

Uh, how about because Bush was responsible for starting the war that the civilians died in, either directly due to stray bombs, "friendly fire", bombing the wrong address, etc, etc or by the insurgents that WERE NOT THERE until the country was destabilized by W's invasion...either way, W's nickel.

>> Saddam: tens of thousands innocent Iraqi civilians dead = ???
>> Bush: tens of thousands innocent Iraqi civilians dead = ???

Well, I guess that makes it OK then---ONLY a *mere* 30,000. Wonder if you would be so casual about it if it was *your* innocent mother, brother, uncle or other loved relative or friend...

You say "Saddam was HUNDREDS of thousands dead per YEAR". Well, let me pull a MnMikew and ask if you have some links for that.

According to http://www.rokulabs.com/products/selectionguide.php, they
support:
MP3
AAC
WMA and DRM10
WAV / AIFF

but there are restrictions in the current software - see
http://www.rokulabs.com/support/internetradio.php - including WMA Voice
format used by BBC World Service (future support planned) and nothing other
than http streaming.

Seems to work with iTunes.

< Snip >

For 6030 where I'm located the bubble jamming of Radio Marti from Cuba
is the problem. Radio Marti itself is not very strong at my location. I
have to listen upper sync selective sideband on 6035.

There is another station near but not on channel that plays havoc with
the BBC on 7160. The carrier off something like 1 KHz is the main
problem. I again have to listen sync selective sideband on 7160 or use
the notch filter.

Phasing to isolate a broadcaster is generally easier to perform in the
MW band and will be considerably more difficult as you move up the
frequency spectrum. If you are hunting for stations in the MW
frequencies, you might want to consider a 3D tilting, tuned loop antenna
to isolate a particular station. I have both the KIWA MW loop and the
Quantum QX Pro loop and they both work extremely well. The KIWA is no
longer made but the Quantum loop is still available.

The Quantum Phaser is made to work with the Quantum QX Pro loop and it
is a very good combo should you want to phase the loop against a
longwire antenna (Q-Spoil control)

Good luck!

>>> The R4B of course has 1 kc markers on the skirt of the tuning knob.<<<

Right and I luv it when someone uses "kc", thought I was the only one still stuck on kc and mc! The new dial is a copy (think they made 25) of the old R-4 dial and will work on the R-4, 4a and 4b. It will sure look nice to get the old yellowed one off. It was kind of weird, the dial on the xmiter looked like new but the receiver dial had slightly yellowed. The only thing I can figure is that when they both went to drake in late 89/early 90 for an overhaul/tune up it's possible that drake replaced the dial on the xmiter and not the receiver. RM~

John Plimmer,

I would agree for the Shortwave Listener (SWL) who does
not want to get in to a lot of extra boxes in the Shack and
the resulting confusion of : ? Which Knob To Turn Next ?

The simple Matching Transformer between the Antenna
and the Coax Cable feed-n-line is the single best item
to add to the External Antenna to Coax to Radio System;
except for a good earthen Grounding Point.

NOTE - It is Interesting that you identify the use of
the 9:1 Matching Transformer for the lower reaches
of the spectrum AM/MW Band Tropic Bands and
such and the use of a 4:1 Matching Transformer
for above 10 MHz.

Question - Which respect to which type and size of
Antenna or Antennas do you make this statement ?

i want to know - iane ~ RHF

2828. Re: Super-Ball {Round Metal Sphere} Antenna - Was : "All Waves" Spherical {Metal Ball} Antenna an all around Isotropic Radiator :o)

Newsgroup: rec.radio.shortwave
Date: 2006-04-28 09:27:24 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146216444.875663.116330@u72g2000cwu.googlegroups.com>
Source record: 72086

Here is one possible answer to the Inner {Outer}
Workings of the Super Ball Antenna

- -

Date: 28 Dec 2003 06:49:31
From: Henry Rogers - WHRM
Subject: Re: Super Ball Antenna

Look at the potmetal eyelets used to fasten the guy wires.

These are molded into the insulated base but the eyelets
are internally connected to the Super Ball sphere.

The insulator provides isolation for the mounting pole
but the guy wires are actually part of the antenna.

Henry Rogers - WHRM

So I want to Rig my cut-to-order Dipole Antenna to use
for general across-the-bands Shortwave Listening.

First - Don't Think of It as a Dipole . . .

Think of it as Two Horizontal Wire Antennas that are fed
with a Pair of Matched Lines {Ladder Line - Twin Lead - etc}

Second -Taking the two (a pair of) feed-in-line Wires and
Connecting them together at the "Antenna" HI-Z (500 Ohm)
{Red} Terminal of my Radio / Receiver.

Third - Then I connect my Ground Wire to the "Ground"
HI-Z (500 Ohm) {Black} Terminal of my Radio / Receiver.

Now I have a . . .

Don't believe it. They are 50 years old and need a lot of work to be
reliable. If they don't have all of the coupling capacitors replaced
you will be buying a lot of tubes.

An active antenna element must always be ''High'' impedance. SOP
dictates the element be shorter than a quarter wave at the highest
frequency of interest, to more closely power match the Z(in) of the
impedance converter (usually an FET).

Source record: 72005

RHF
In earlier years I must have owned every type of antenna
tuner/preselector that was on the market.
The MFJ I found were so badly made of such cheap parts that they were
frankly awful.
Then I had an expensive Japanese Mizuho and finally a ham made me a really
nice one tube amplifier/tuner.

I must say though, that for use on holidays with my portables the old Grove
Mini Tuner was great. A really useful little box of tricks that did wonders
for maximising signals off a short wire 30/40 foot long (I'm not in favour
of hanging too much wire on a portable).

But then I started experimenting with the simple home brew magnetic matching
transformers and they outperformed all the fancy knob twiddling
tuners/preselectors by far, apart from there ease of use (no knob twiddling
and nothing to adjust at all).

I did experiments with various magnetic matching transformers I had and
found 9:1 the best for my needs on the BCB mediumwave band and the Tropical
bands. The 4:1 matching transformers worked well listening to international
broadcasters above 10 Mhz.

The 9:1 magnetic matching transformers I mainly use with my 1000 foot
beverage antenna's, but it also worked superbly on my suburban Windom
antenna which was only 55 foot long but I managed to get it up 40 foot high.

I don't think the length of wire attached to the magnetic matching
transformer matters at all - I have used them from 50 foot long on holidays
from hotel rooms to 1000 foot long beverages on serious DXpeditions. I think
what matters is that 4:1 favours reception in the upper HF band and 9:1 is
very good lower down the band.

Some of my pals who own Drake R8 series RX's run their longwires direct into
the shack and couple up to the 500 Ohm input of the Drake. But to me that is
silly, as if you look at the Drake workshop manual you will see that the 500
Ohm input on the Drake is terminated into a 9:1 transformer anyway, so it
is much better for noise abatement to terminate your longwire 30/40 foot
away from the shack/building and then run a coax into the RX and terminate
it into the 50 Ohm connector on the RX.

>What can be done to remove this splatter? Very little I am afraid. One of
the only possibilities is to "phase" out the splatter with a device
such as
the MFJ 1025/6, but these devices also have severe limitations and will
not
work in every circumstance. Despite the glowing reports of some users
with
these phaser's, they will only work if the station you want to phase
out is
not too strong and also that the offending transmitter is at right
angles to
the transmitter you are trying to receive. <

John , I agree with you on the splatter - it is a difficult problem
that requires extraordinary measures, and I have a couple of Local SF
Bay Area, California, stations that do exactly this - but the MFJ-1026
in many cases actually can take a strong station and almost null it so
that a weaker station behind it can be read as the louder of the two
stations. I don't think "right angles" is the key on this device - I
think the device internally performs a phase interference operation
on the offending signal, just as it would on a noise source, and nulls
it that way. I do know that a noise source to be nulled does not need
to be at right angles to the desired signal.

The newspapers and journals are full of information about warrantless wiretapping and eavesdropping. What many people do not realize is that the type of eavesdropping occurring for national security purposes is vastly different than the real world of eavesdropping and wiretapping utilized for industrial espionage, law enforcement and by your local private investigator or tech-guy that has crossed the line into illegal eavesdropping.

Now, the realistic world of eavesdropping has been thoroughly exposed in the new two-hour video called "The Red Balloon". Already recognized as the best Issue Awareness Video in 2005 at the international Aurora Awards and given a 5 Stars review in the March issue of Security Management, The Red Balloon presents the government and industry statistics about industrial espionage and eavesdropping, and how big this problem really is. It also reveals the different types of eavesdropping devices used with illegal wiretapping and eavesdropping and the novel techniques utilized by both professional and amateur eavesdroppers.

If you are curious about the eavesdropping industry then you simply must see the powerful informational video presented by one of the world's most recognized experts in the field. To learn more you can go to http://www.tscmvideo.com

The impedance does not match up that well as a 300 ohm transmission
line to 500 high impedance input on most radios but it might work well
in low noise situation. Anyone ever try this?

> > Antenna or Antennas do you make this statement ?

I thought about this and I think I have an answer to the rational behind Johns assertion of different transformation ratios work better depending on frequency. I think he is actually seeing transformer efficiency at work rather than the wire impedance changing over frequency. The higher ratios of 9:1 require more turns then the 4:1, which can cause a roll off in high frequency response. Depending on winding technique the roll off can be severe. Transformer cores also have a frequency response that must be considered. The question is has he had the opportunity to test the frequency response of the transformers he used?

The 4:1 could be the right impedance if the wire is low to the ground by the way.

Another possibility is that the earth under the wire has a conductivity that varies with frequency. Conductivity change over frequency should not be enough to explain a change of 450 to 200 ohms of the wire over

frequency.

The horizontal single antenna is one element where the other element is the ground under it. This is an unbalanced Marconi type antenna. As a RF current induced on the wire above ground; the E field from the charge connects to the ground under the wire. The distance from ground determines the impedance of the wire with air as the dielectric. This impedance characteristic is similar to how a capacitor operates where the closer the plates are to each other the impedance and decreases and the value of capacitance increases. Surface area, dielectric and plate spacing all affect the capacitor response.

The two things you can control for antenna wire impedance is wire diameter and height above ground. The higher the wire the higher the impedance of the wire similar to capacitor plate distance. The smaller the wire diameter the higher the impedance of the wire similar to capacitor plate area. See how that works?

Regarding the Drake 500 input I agree with his comments of AC power operation and note an exception for battery operation it should work fine as long as you also connect the radio ground to a ground stake or radial under the wire. I'm sure Drake wound a good UNUN in the radio front end.

Dear Mike,

I can't tell you where to send the radio other than Sangean but I can tell you that I had one of these also and it "died" too after only three years of ownership. I just threw it out. It was out of warranty and I figured that it just wasn't worth paying to repair it. (I have little confidence in a unit that "dies" that quickly. And, yes, I opened it up to see if I could figure out what went wrong but I believe it was the microprocessor, based on how it "died" - nothing much you can do with that other than to replace it.) You'd have to check, of course, but you may be able to buy a new SW receiver for not much more (or even less!) than the cost of repairing the set plus shipping charges (depending, of course, on just what needs to be done).

Of course if the radio has some particular sentimental or other value to you, then perhaps others on this group can be of more help to you in determining who can repair it.

Best of luck,

Joe

The cost of replacement for many radios, tv's, stereos is so low that it doesn't make much monetary sense to repair. Additionally consumer electronics have overall become very reliable. Consequently the many tv/radio repair shops that were once common have disappeared for lack of business.

The cost of replacement is so low that most goods are thrown away when broken any more. That's unfortunate because I think a lot or repairable products are wasted and our landfills are filling up as a result.

I'm not familiar with the 808, but I believe it sold for about $100 when new. There are guys that work on radios, but my guess is it will cost a minimum of $50.00 to get the radio looked at and possibly repaired. Your best bet would be Sangean because they will have the greatest chance of having parts.

If it's out of warranty and dead I would probably just get a new one.

He's talking about shorting both legs together I think. Most Hi-Z
inputs work OK with 300 or 450 Ohm line, as well as monopole wires.

Thanks for the info...and it *may* even be true! <grin> I can find web sites that state the current Iraq death toll for innocents/non-combatants varies from 30,000 to 130,000. I just chose the lower, more conservative number.

In any event, that was not my point and I am not saying Saddam was not a bad guy.

What I *DID* say was that W "was responsible for the deaths of tens of thousands of innocent people" and that Saddam "was responsible for the death of tens of thousands of innocent people".

Both of these are *still* true statements. Period [.]

One other problem that I found to be fairly common with these sets is
dirty contacts on the "line plug operated" switch that transfers between
AC and battery operation.

what he said.

Also, you might suspect the SW local oscillator transistor, which is a little round plastic disc with four leads coming out at right angles, every 90 degrees. I have fixed a couple of RF5000's where they were intermittent, and when I removed the local osc transistor after deciding it was a problem, it just fell apart.

Whatever you do, don't take that bandswitch apart!

John

2869. Re: Transmitter splatter

Newsgroup: rec.radio.shortwave
Date: 2006-04-28 20:21:02 UTC

Message-ID: <1146255662.160445.311510@j73g2000cwa.googlegroups.com>
Source record: 72027

Splatter is formed when you overmodulate a waveform so that you are actually driving the modulator off. No?

This is my theory and I'm sticking to it for now.

When you overmodulate the carrier and drive it off then you are creating quasi-squarewaves. Squarewaves of course (theoretically) contain an infinite spectrum of harmonics. This is why we put a click filter on a cw transmitter. It slows down the steep edges and removes some of the higher order harmonics that produce clicks and out of band components.

So now we are summing a squarewave that is rich in odd harmonics and a sine carrier. Stick this into a non-linear (toob or transistor) device and you got the harmonics of the squarewave and the carrier frequency mixing up nicely. You could do an inverse fourier transform here to prove it to yourself, but have I ever lied to you before?

If you were to modulate a 1MHz carrier with say a 1kHz squarewave then you would have components at n=odd multiples of 1kHz away from 1Mhz. 9.999Mhz, 1.001Mhz, 9.997Mhz, 1.003Mhz.... and so on. Each successive harmonic would be smaller, but they would go on for some time.

Throw some music into the mix and then the splatter is not fixed to a set of nice odd multiples of any one modulating frequency, but a whole band of frequencies. If these splatter components end up on a particular frequency up or down the band where you are then you don't really have any means to get rid of them. You can narrow up your filter some maybe, but that isn't really getting rid of anything. Maybe making the situation more tolerable. When I was a little kid we had a bootleg cb radio guy in my town that was constantly splattering the whole band. Probably overdriving a linear.

So point here is I am doubtfull that a filter would help the situation, but maybe some kind of cancelling technique might work. This MFJ1025/6 sounds like an interesting piece of gear.

I think I'll drag my Racal RA17 back into the shack for some boatanchor fun this weekend.

Yep, back when bin Ladin considered the US to be his friends and before
anyone in the entire world believed he'd go off the deep end.

> BTW, Clinton didn't deal with Iran as the program was quite undercover.
> Perhaps you are thinking for North Korea? North Korea had a nuke
> program, stalled it when Clinton bought them off, but started it up
> again after Shrub declared North Korea to be part of the Axis of Evil.

Nope. North Korea SAID they stopped, in exchange for massive bribes from
Clinton. When Bush stopped the bribes, North Korea was already many years
advanced from where they were when they SAID they stopped.

"It's common knowledge" is liberalspeak for "evil Shrub must have done it".

Not even the Bush-hating media have tried to give a number like that one.

No one's blaming the victims. We're blaming the city and state "leadership"
for not leading. It wasn't the citizens that left those buses to flood.

Here's a little more:

MIAMI (Reuters) - Conservative radio commentator Rush Limbaugh turned himself into police in Florida on Friday and was charged with prescription drug fraud as part of a probe that began more than two years ago, authorities said.

Limbaugh, who admitted an addiction to prescription painkillers in October 2003 after reports he was facing an investigation, was released on $3,000 bail after being held about one hour at the Palm Beach County Sheriff's Office.

When I used to work at the old (now defunct) auto/truck/lawn mower battery factory that was in Florence,Mississippi.Some of those rollers on those conveyors long since stopped rolling around and around.(that area of the factory had a dirt floor with sawdust on the floor so whenever the batteries fell off the roller conveyor lines,it wouldn't break the batteries) We had to use one of those plastic pump up garden sprayers thingys,with oil in the sprayer on some of those rollers,so we could slide those great big heavy 18 wheeler truck batteries along the conveyers to hook them up to charge them up,and after they were charged up,unhook them and take them off the conveyors and put them on another conveyor line.

One night,one of those big truck batteries landed on my left foot and broke my middle toe in two places.They sent me to a clinic.The doc taped my broken toe along side another toe and he gave me some pain pills.I took those pain pills according to his advice and the directions on the plastic pill bottle.I never have gotten addicted/hooked on pain pills or any other kinds of pills before.Whenever I get a headache,I take two APCs (ordinary Bayer Aspirin) and that does the trick for me.

2904. Re: QUESTION - Does a "Non-Resonant" Dipole Antenna work better {Benefit} when a Receiver is RF Grounded in the Shack ? ? ?

Newsgroup: rec.radio.shortwave
Date: 2006-04-29 01:25:00 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146273900.076270.129920@u72g2000cwu.googlegroups.com>
Source record: 72212

FWIW :

Starting with a Single Band Dipole Antenna :

First - Both the Wires of the Ladder Line / Twin Lead / Twisted Pair
are connected to "Antenna" HI-Z (500 Ohm) {Red} Terminal of the
Radio / Receiver.

Second - The Ground Wire is connected to the "Ground"
HI-Z (500 Ohm) {Black} Terminal of the Radio / Receiver.

For a "Receive Only" Shortwave Listening (SWL) Antenna
it works OK.

For use as a Transmitting Antenna then an Antenna Tuning
Unit (ATU) "Trans-Match" would be required.

SO... WHAT KIND OF ANTENNA IS IT ?

At the Top the Antenna has two Horizontal Arms that are
Part of the Wire Antenna Element.

The two feed-in-line Wires can be considered as simply
feed-in-line or as part of the Antenna.

David says that this is a Top Loaded Vertical.

I believe some refer to it as a Double Extended Zepp Antenna ?
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=7682

I tent to think of it as a Twin Inverted "L" Antenna -or-
opposing classic LongWire {Random Wire} Antennas.

WHAT WOULD YOU CALL THIS MISS WIRED DIPOLE ?

i want to know - iane ~ RHF

Cuhu,

Yes, things heating up and lots of weird things going on then. That would have been 1964 if my math is correct. Mostly special ops and 'military advisors' at that point. Diem had been murdered and Kennedy assassinated the previous November. Johnson was just handed a nightmare. I think the French may have had a lot to do with the whole mess.

31 years ago I was on my way back from there. I'm an old Tin Can sailor outta Pearl. Another week and we would have been involved with evac as well. I recall a bunch of grunts were forgotten on the roof of the embassy that night - were picked up the next morning as the NVA were about to make entry onto the roof.

Best not to go launching nukes Helter Skelter mr. helmsman. Save em up for the big show.

I will keep ear tuned to that side of world. Thanks for Heads up dxAce.

The french were just one of the "imperialist" dinosaurs whose time had come to be extinct. Too many empires were helping themselves to the resources and riches of other peoples' countries and carting it all off home to make wealth. In the the process, they raped, impoverished and degraded the people who took their opportunity to rid themselves of these thieves. We got caught up in the flow of history when communism led the final push to rid the country of their overlords. Now we think we can do the same with any country that has oil, only instead of godless communists, we have fanatical muslims. And leading the crusade is an equally fanatical american president who thinks he talks to God and that God wants us to kill fantical muslims. Does anyone see a volatility and historical irony here ? As for nuclear weapons, the genie is out of the bottle, and I can tell you he don't want to go back in. The age when people shared with one another and competition was not to prevent each other from staying in business, it spurred genuine innovation and prosperity. Like it or not, we have no right to the oil that belongs to other countries. Not even our best missiles or outrageous consumption gives us title. And the fantics in the countries that hold the largest reserves hold the trump card. If we try to seize the oil, the fields will be destroyed, but whoever owns it, it runs out in our lifetime and we all step back into the stone age no matter how powerful we think we are.

So enjoy the way things are now, because those days are being swept away by a storm of our own making. Vietnam will be repeated again and again. And in the end, we will lose everything civilised that was created in the last 50,000 years. I will find no pleasure or comfort in watching people suffer, especially those I love, and we will not see God clapping His hands for joy at who we destroyed, but weeping that we never got the point.

All life all holiness come from you O Lord

My Yaesu is currently casters up so I'm forced to rely on my Degen 1102,
which simply isn't up to this sort of challenge. I had a little extra
dough left over this month after bills so I may pack the Yaesu up and
ship it to LA for repair.

The NYFD radio system was known to be broken well before 9-11 and
Giuliani never showed any interest in fixing it, let alone going after
the fraud.

I live in the NYC suburbs and a neighbor was a retired NYFD
communications engineer how used the phrase like "criminal fraud" and
"firemen will die" in reference to the contract for the then-new
system. This was before 9-11.

DaviD - Gee Wow ! - You are Right :o)

But it is a NON-ANSWER and an Attempt at Misdirection
and Ignoring the Facts.

DaviD - Try Being Honest with yourself and Answer the Questions :

RePosted = = = Gee DaviD - - -
So is it your Claim that President George "W" Bush in one
year in office received "52" {Count Them Fifty-Two} well
documented {separate} Warnings prior to the "9-11" Attacks . . .

DaviD - So then just how many Warnings did President Bill
Clinton receive in the Seven (7) Years between 1993 (WTC#1)
and 2000 (WTC#2) while he was in office ?
- - - DaviD - Was Bill Clinton President at any time during
the Following Years : 1993?, 1994?, 1995?, 1996?, 1997?,
1998?, 1999?, and 2000? -Try Remembering Real Hard DaviD-

Q # 1 - How Many Clinton Warnings Were There ?
- - - How Many DaviD - How Many ?

Q # 2 - Can We Count The Warnings Clinton Received ?
- - - Did You Add-Up the Warnings DaviD - How Many ?

Q # 3 - Where is the Documentation for These Warnings ?
- - - Where Is the Documents DaviD - How Many ?

DaviD - Could It Be - - -
These are a few of the Records that Sandy Berger stole
from the National Archives and Destroyed ?
http://www.cnn.com/2005/POLITICS/09/08/berger.sentenced/
- - - It Is a Matter of Public Record DaviD ! -Silence-

DaviD - Will We Ever Know - - -
The Whole Truth about the Culture of Cover-Ups and Lies
that was forever ongoing within the Clinton Administration ?
- - - DaviD - Why Do You continue to Cover-Up and Lie
for Bill Clinton and his Administration ? - Why DaviD ?

-OR- The Magical "52" Warnings just another fabricated
Democrat Party of the USA Daily Talking Point ? ? ?
- - - Remember DaviD the Number is "Fifty-Two" that's "52"
and that's a Real Number - Fifty-Two What ?
It does not matter it is "52" and Bush Owns It !

The radios at the WTC are a problem for NYC. It is not a federal issue.
Or do you like the feds telling cities how to do their operations?

==========
Turning now to the actual use of the phrase "the price is worth it," we
come to U.S. Secretary of State Madeleine Albright's reply to Lesley
Stahl's question on "60 Minutes" on May 12, 1996:

Stahl: "We have heard that a half a million children have died [because
of sanctions against Iraq]. I mean that's more children than died in
Hiroshima. And--you know, is the price worth it?"

Albright: "I think this is a very hard choice, but the price--we think
the price is worth it."

In this case, however, although the numbers dead are mind- boggling--the
ratio of dead Iraqi children to deaths in the WTC/Pentagon bombings was
better than 80 to 1, using the now obsolete early 1996 number for Iraqi
children--the mainstream media and intellectuals have not found
Albright's rationalization of this mass killing of any interest
whatsoever. The phrase has been only rarely cited in the mainstream, and
there has been no indignation or suggestion that the mass killing of
children in order to satisfy some policy end was immoral and outrageous.

2935. Special DX-394 receiver package for sale

Newsgroup: rec.radio.shortwave
Date: 2006-04-29 05:03:08 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <58GdnQrk-JcSbs_ZnZ2dnUVZ_sadnZ2d@comcast.com>
Source record: 72243

I have been playing around developing a new version of the DX-394. My goal was one that would do almost anything for anyone in any situation. It must be selective and sound great. It also must be easy for anyone to use in its modded state. I feel this 394 meets all my goals quite well. This receiver performs and is fun to use !

power source:
internal 9 AA rechargeable or alkaline batteries *or*
AC adapter (wall wart)

Speaker:
upgraded internal (significantly larger) *or*
included external

Upgrades:
super high quality Murata 6kHz AM filter with 1.5 shape factor !
audio bass extension mod
Xtalk fix
chuff kill

antenna:
included portable ramsey AA-7 active antenna *or*
included 100 feet of antenna wire for home use

cosmetically, the cheap plastic look has been replaced with a cool semi-flat black look. no turning back after seeing the impressive results.

This 394 can be used anywhere without worrying about power supply or signal gathering.

I have been using it for a week or so, the only issue of any note is that the display should be dimmed when on AA battery power. Similar to when most other portables turn off the backlighting when on battery power and require manual over-ride to wasting battery.

I took a different appraoch to the battery setup on this one. The holders are attached to the inside of the bottom case. The feedline comes through the case and chassis. I have mounted a receptacle at the back for when it is not in use to prevent short circuiting.

I am selling this system for $325 plus shipping. The active antenna is an assembled kit that sells unassembled for $40. it is a really nice antenna for the money. Also included is the original box and manual and the stupid tiny whip antenna. additional mods might be done at no cost on agreement with the purchaser. Perhaps a carry strap ?

I have posted pictures into a slide show here:

Bruce Jensen - I owned a MFJ 1026 for several years and tried it with many antenna configurations with not much luck. The 1026 was modified for MW reception, but it neither reduced the suburban noise nor phased out the powerful stations I was trying to get rid of.

I found that nulling out an unwanted station in the same direction as one you are trying to get nulled that out as well. Hence I found that the more divergent the direction of the stations the more likelihood of getting a useful null.

So, not ever having had much success with the MFJ 1026, I passed it on to a friend who is a serious DXer in suburban Cape Town. He also tried various configurations without much success. We then took it on our most recent DXpedition to Jongensgat and coupled it up to two 1000 foot long beverage antenna's, but again with no luck in phasing out unwanted stations.

I am aware that others write glowing reports of their MFJ 1026's, but that has not been the case with my efforts

I guess it is the storey of Lipton's Tea I was really thinking about.Back in the olden days,in the Wild West, (Truth is though,the old ''Wild West'' wasn't anywhere near as ''Wild'' as hollyweird likes to project) Arbuckle's coffee was the usual as far as coffee went.There was always a stick of candy in every bag of Arbuckle's coffee and out on the Cattle Drives,the Chuck Wagon cook never lacked for somebody to grind up that coffee.I own some old books which tell it like it really was,in the old American West.

Source record: 72098

Telemon - In arriving at my conclusions on the 9:1 magnetic matching transformer being better for the lower end of the band and the 4:1 better for the top end of the HF band, a ham friend who is very knowledgeable on electronics and who built the matching transformers assisted me in a range of experiments.

Over a couple of afternoons we coupled up various types and values of matching transformers to my Windom antenna.
The Windom was 55 foot long and 40 foot high. The antenna was well grounded.
Starting on the 25 Mhz band we worked our way down the band to the MW spectrum and took careful SINPO readings of stations as we went.

Of the various value matching transformers we tried, the 9:1 was clearly much better below 10 Mhz and the 4:1 over 10 Mhz.
This is not rocket science, as hams listening in on the 1.8 Mhz band also generally use 9:1 matching transformers for their receive only antenna's.

I have now used a combo 9:1/4:1 magnetic matching transformer over the years and always find the 9:1 much better on the various antenna configurations I have used - it's passed the test of time.

RHF - I would appreciate it if you gave some of your excellent leads to commercial matching transformers available and some simple tips for building your own.

I own an ANC-4 already. This came up in a previous thread. When JPS
left the consumer business, they blew out the ANC-4 for around $100.
Eh, not much of a blow out I guess as I think they were about $150 when
new.

I'm not sure why someone would choose the MFJ over ANC-4 since the
ANC-4 is much wider bandwidth. The ANC-4 is useable down to 100Khz.

I need to dig up the right cables and set up a noise antenna. Seems to
me you would need an active antenna if you expect to get any
cancellation at low frequencies since a plain whip wouldn't get much
signal at low frequencies.

The ANC-4 has BCB filters if needed. Most good shortwave radios wll
have a BCB filter in their signal path, so this seems a bit overkill.
MJF just filters the whole BCB.

Some like the Mighty Fine Junk version.

I was listening from a tent last weekend with about 500 foot of 12 gauge
wire stuck about 40 feet in a tree. Anyway, I made some pretty good
catches of the Voice of Vietnam.

The following times and frequencies

1000 UTC

English
9840 khz
12020 khz

1100 UTC
English
9840 khz
12020 khz

1230 UTC
English
9840 khz
12020 khz

There used to be a 15010 frequency that was used to but my latest WRTH doesn't show it. I think it may have been discontinued. I listened to the 20th anniversary of the end of the war. It was interesting to say the least. Actually I remember they had a contest at that time for people who wrote in.

I think there is a North American broadcast relayed via Sackville somewhere on 40 meters and 31 meters.

>
> WHAT WOULD YOU CALL THIS MISS WIRED DIPOLE ?

Sorry I misread your previous post.

Any time you have one element for the antenna and ground for the other
side of a radio input you have a common voltage mode antenna.

There are two basic voltage antenna types Marconi and Hertzian. The Marconi is single element and ground common mode antenna. The basic Hertzian is two elements and balanced making it a differential mode.

Depending on dimensions of the horizontal and vertical parts your proposed antenna could be a top loaded vertical. Change the dimensions and it could be an inverted L. Just understand that the mode the antenna operates in does not change. The vertical portion can connect to the horizontal section at the end, middle, or somewhere in between and it still is a common mode antenna whatever the resulting shape.

Call it the RHF special.

The magnetic field lags the electric field by 90 degrees and
so you can determine from which of two opposite directions a
wave is coming by comparing electric and magnetic fields.

In particular, you can cancel one and peak the other, by taking
the electric field off a whip and the magnetic field off a loop
and combining them, the whip and the loop being in the same location.

In practice, you don't do any analysis and just null out the station
you want to null out.

To do the same thing with two whips requires some separation of the
antennas, a quarter wave being best.

(Smaller separations start to reduce the gain in un-nulled directions,
and larger separations start to lose coherence when there's a spread
in angles of arrival from the nulled station. Neither is fatal, but
just a reason to prefer a quarter wave separation. The loop + whip
eliminates the problem completely by preferring no separation at all.)

``Lags'' by the way is a matter of convention, you can as easily say
``leads,'' all depending on whether you like right-handed or left-handed
coordinate systems. They're 90 degrees apart, is all. A phasing
system like the ANC-4 puts the 90 degrees back in one path so one
signal can be used to cancel the other completely.

The reason, by the way, that the depth of nulls is limited in
casually-constructed single loop antennas is that they pick up a little
eletric field along with the magnetic field, and there's no orientation
that nulls both eletric and magnetic fields at once. If it were
a matter of only the magnetic field, there would always be some
orientation that nulls it exactly and completely, no matter how

sloppily constructed the loop is, because the magnetic field can
always be used to cancel itself somewhere.

Another by the way : the reason I started adding antennas and ANC-4's
was to null out multiple stations. Say you want to get rid of two
MW local broadcasters, A and B, to receive C, on the same frequency.

Step 1. Null away A using antennas 1 and 2.

Step 2. Null away A using antennas 3 and 4.

Step 3. Null away B by combining the outputs of step 1. and step 2.
Station A is also nulled because it's not present in the inputs.

Step 4. You're left listening to C, the station you wanted.

You can also do this with only 3 antennas and 2 ANC-4's but there's no
simple procedure I know of to follow to achieve it beyond endless
fiddling until it's done.

And of course with 8 antennas and 7 ANC-4's you can procedurally null
3 stations and receive a fourth, though I never got this to work.
(Or, if you had a computer to do it, you could do it with
4 antennas and 3 ANC-4's, showing that my regularized method is
unnecessarily exponential when you start adding nulls.)

Telamon,

At least according to my reads over the years.
Amateurs have been hooking-up their Dipole
Antennas this way for decades using an ATU.

The Twin (2) feed-in-lines would effective make them
a thicker single conductor.

Assuming that the Twin (2) feed-in-line are mostly Vertical
and the Splight Top Wires (2) are mostly Horizontal

Then what you got is . . . {Marconi}
A Moderate Size Vertical Antenna with a Big Top Hat.
[Gee isn't that what David Said ?]

Limbaugh Cuts Deal in Florida Drug Fraud Probe
Fri Apr 28, 08:34 PM EST
http://ca.news.yahoo.com/s/29042006/6/n-usa-limbaugh-cuts-deal-florida-drug-fraud-probe.html
Source : Reuters
-written-by- Tom Brown

MIAMI (Reuters) - Rush Limbaugh was charged with prescription drug fraud in Florida on Friday as part of a deal ending a criminal probe of the conservative radio commentator that began more than two years ago, his lawyer and authorities said.

Under the deal the 55-year-old Limbaugh, best known as a brash and often moralistic talk show host, will see the case against him dropped in 18 months, his attorney said.

Limbaugh admitted an addiction to prescription painkillers in October 2003 after reports he was facing an investigation for allegedly using a housekeeper at his Palm Beach mansion to illegally obtain prescription drugs.

He was booked on Friday on a single count of concealing information to fraudulently obtain a prescription drug after turning up with his lawyer, Roy Black, at the Palm Beach County Sheriff's Office.

He was released after less than an hour on $3,000 bail, Black told Reuters.

He said Limbaugh filed a written plea of not guilty, and would persist in denying that he committed the crime of so-called "doctor shopping."

The charge will be dropped in 18 months provided Limbaugh continues to seek drug therapy treatment from the doctor who has been treating him for the past 2 1/2 years, Black said.

"The prosecutors and I agree that there shouldn't be a criminal prosecution, and we agree there shouldn't be any court proceedings," said Black.

As part of the deal, Limbaugh also agreed to make a $30,000 payment to the state of Florida to defray the public cost of the investigation.

"This guy has been undergoing investigation for two-and-a-half years. You can imagine what that does to somebody," Black said in a telephone interview.

"He's just happy that it's finally ended and he can go back to his normal life," he said.

KEY POINTS TO REMEMBER :

1. Single Charge Filed

2. Booked and Bailed

3. Not Guilty Plea

* Trial ? What Trial ?

4. Fines Paid {Payola}

5. Be Nice Rush - The Single Charge Will Be Dropped In 18 Months wink,
Wink. WINK !

SO... IN 18 MONTHS THE DA BLINKS AND
SAYS "OOPS" - IT DID NOT HAPPEN [.]

What double standard you idiot! Yours is another example of the will of
the people being thwarted. I never said Kennedy won the popular vote.
My point was that the people don't elect the president. I never
mentioned Kennedy or that criminal Nixon.

Can't you stop marching in the right wing parade long enough to have a
decent conversation?

Unfortunately 9840 is blocked by World Harvest Radio beginning at 1200. VoV was audible there prior with another language service. Will have to see how 12020 holds up at 1230.

Only a brief mention of the anniversary was made at the start of the 0100 transmission on 6175.

Clearly Limbaugh has a problem. He has an addiction to some painkillers and needs help controlling that addiction before it kills him. It really doesn't matter whether he is a Republican, Democrat, Whig, Green Party or any other political leaning. He is addicted to one or more drugs. That he is a very public and easily recognized individual probably gives him easier access to doctors who will overfill or give him multiple prescriptions.

I really don't agree with much of what he says nor do I like the way that he says it on the air. But as another human being I wish him the best in getting this problem under control.

Correct, the radios are not a federal problem. Their acquisition is
clearly a state/local issue. But there is clearly a need for better
coordination of frequencies and modes in use so that the various arms
of the federal and state agencies can talk to one another during an
emergency. It's a complex problem that I think needs strong federal
involvement. Otherwise you will have the same problems when the
emergency responders try to communicate at the next major disaster.

A Cost vs Benefits analysis will tell you that it ain't worth it. How
often does something like this happen?

Nextel does more harm to Public Service communications than anyone
else. Motorola in general, actually, with their needlessly complex
trunked bullshit.

I believe the pros in the agencies think otherwise. At the federal level the Defense Department has had a group assigned to do just that for several decades. And there are several joint groups working between agencies to increase the chances of emergency workers being able to communicate.

At the very local level surrounding communities sometimes work together to establish common frequencies and set up the structure to allow communication.

And there are some ties between local, state and federal agencies but not enough.

I have Trunk Trackers but my local agency is still analog T-Band. We
have a very well coordinated mutual aid system here in SoCal.

The Defense Department is the biggest rip-off going. They make us
less secure because they serve the corporations, not us peons.

If this means anything I for one don't think the life of the BPLOSAURUS is going to be a long one. Too many other kick ass ways of getting signals down the toob. 60Hz power lines are just that. It's no wonder repeaters are needed every so often as the article relates. Coax, glass fiber, wifi-cellular, satcom, and technologies like this are what we're all after. Services like fast scan videophone and movies on demand are almost here. They aint gonna be goin down the power lines though.

Don't just sit around waiting for this dinosaur to become extinct by itself. Help out wherever you can. Make noise as Mr Telemon said. I don't know if a link was posted (by Telemon) to make comments to. ARRL is fighting as well and that takes money. Some people don't like ARRL, but I don't know if any other orgs fighting. Anybody??? Hell, I would order BPL just to figure out a good way to jam it. And those BPL boxes are really obvious. Like a big red bulbous zit on the end of your nose. I'm not advocating messing with BPL boxes here. Heheh.

They allowed BPL because it's a win-no lose situation for the politicians. If BPL somehow succeeds, the politicians get to ride with Al Gore on the "helped create the internet" bandwagon. Some voters are stupid enough to believe that crap.

If BPL continues to fail, the out-of-power party can't slap the in-power party with "The regulators are blocking BPL choice because they're owned by the DSL companies/cable companies/satellite companies." Some voters are ...

It's been my impression that BPL has been largely a disappointment, but now I'm not so sure. Despite BPL's technical shortcomings it contiues to attract money. Perhaps this is how the "new economy" works. Sell dreams and leave the mundane business of making products to the Asians.

Anyway, the American financial industry is now bigger than the American manufacturing industry. We may no longer dominate the world's production of things which actually work, but we sure can keep the money flowing, even for the damndest trekkie physics projects. And you wouldn't expect the Republicrat party to discourage fools from parting with their money, would you?

Listeners who hear BPL interference should complain to the FCC.

The ARRL has been helpful in identifing the various sorts interference which BPL makes. I'm sure there will be more information at their website. It would be counterproductive to incorrectly identify interference as caused BPL when it isn't. The BPL industry tries to use incorrect complaints to discredit all complaints.

The most effective complaints will probably be those concerned with public safety communications concerning interference with aircraft and coast guard communications, as well as military and utility communications.

> [Gee isn't that what David Said ?]

A tuner to fix VSWR antenna problems is not a good way to go. It is OK to use a shack tuner for small values of VSWR so the transmitter finals don't have to burn the added reflected power or cause instability. The tuner in the shack does not cause the antenna to perform better.

Because hams operate on a range of frequencies in a band the strategy is to have it resonant in the center of the band so the VSWR is about 1:1 there. Then it is about the same at the band ends say for example 1.5:1. Now the tuning unit is not needed at all in the band center and only has to compensate small values of VSWR at the band edges. This is an acceptable approach to using a shack tuning unit.

Now before some cleaver but silly person mentions that a certain length of coax will cause the shack tuning unit antenna side to actually represent the antenna impedance don't bother. While this is true it only represents certain operating points and is not usable across a band or bands on a multi-band antenna.

In order to get better antenna efficiency you need a tuning unit that actually causes the antennas resonant frequency to change as opposed to a variable impedance matching unit in the shack. This means the tuner has to be a part of the antenna and that can't happen in the shack.

Now do you see the problem this presents for SW listening 3 to 30 MHz?

***
Yes, paralleling conductors makes them look like a bigger conductor because RF current travels on the conductor surface. Generally you want a better circular symmetry than two wires provide. Three would be better as a minimum. Generally three to five is a good number. This is of course diameter and frequency dependent number.

***
I would not know what Dave said. He is in the kill file because he keeps going off the deep end.

Antennas operate in different modes and they can be classified in that way. Pay attention to how they operate so you can determine what will work for you depending on your location and needs.

Not only that, electronic products contain chemicals, metals and other substances that are hazardous to the environment and to human health, and when said products are placed in a landfill these hazardous items leak out and can contaminate groundwater and soil. Groundwater contamination is especially worrisome, since contaminated water can move far from the landfill site. California requires all electronic junk-even batteries-to be taken to special disposal sites as of January 1 because of the environmental hazards.

> I'm not familiar with the 808, but I believe it sold for about $100

Yeah, it's probably not worth fixing. The only electronic items worth fixing are tabletop SW radios and ham gear.

[snip]

>What I was REALLY
> wanting to know was if a preselector would help with blocking spurious
> signals and images out of my older tube single conversion radios.

[snip]

I haven't used preselectors much, but I do have several 455 kc IF radios. The simplest S-38 types used a single tuned RF circuit at the antenna. As expected, these radios don't have much image rejection on SW. The S-40 types have much improved RF image rejection with a tuned antenna circuit and a tuned RF circuit. The SX-62 has two tuned RF circuits and a tuned antenna circuit, and is almost completely free of noticable images, although there are still some bad combinations of weak signals and strong signals 910 kc above. Going from one tuned RF/antenna circuit to two tuned circuits makes a big improvement. Going to a third tuned circuit certainly makes a noticable improvement, but the improvement is not as big as the second.

So, I'd say the preselector should help, but it might not entirely supress the images depending how poorly your radio currently supresses images and on the signal strengths of the two signals.

Here is the page to leave a comment for the commissioners.
Just click on the link below "Online comments /feedback" and you will
get a popup form so you might have to stop your popup blocker to get it
to work. Just type the information in the form and click submit. You
will get an automatic email response that they got your message.
<http://www.cpuc.ca.gov/static/contactus/index.htm>

This is for Californian's so please use a web site representing your
state commission if you live in another state.

I'm concerned that BPL is actually a red hearing and that the real
reason is for telemetry so the power company can read your meter
remotely. This means every house will have interference whether you or
your neighbors have an Internet service provider and BPL is really just
a way to get the public to accept power line communications.

There is no logically know way to stop the radio interference problem
resulting from BPL. This problem is not fixable. It is a known fact that
you will have a problem with any radio service using the same
frequencies as BPL uses. The commissioners have to be aware of the other
trial failures and to go ahead anyway means that they don't care about
the problem so complain and make them care.

You're confusing worth with (market) value. I own many things that I paid
significantly more than market value for simply because they had worth
(personal value) to me. Perhaps this is the case with the Sangean?

Telamon,

I would agree with just about everything that you wrote.

"Now do you see the problem this presents
for SW listening 3 to 30 MHz?"

YES - But for the Shortwave Listener (SWL) using
the Antenna (any antenna) the VSWR could be 1:1
or 8:1 (Doubled (2x) and Re-Doubled (2x2) and then
Doubled Again (2x2x2) - - - Because - - -
The SWLs are using their Antenna for "Receive Only"
and the Radio / Receiver's AGC Circuit or more will
function to compensate for the differences caused
by the variation in VSWR as the frequency changes
from 3 MHz to 30 MHz.

IMHO _ The Shortwave Listener like the Amateur who
puts the ATU at the Antenna before the feed-in-line to
get the most out of their Transmitting Antenna; should
put a Matching Transformer at the Antenna before the
feed-in-line to get the most out of their "Receive Only"
Antenna.

> exponential when you start adding nulls.)

You need 180 degrees of phase shift to cancel or null a signal. If the phase unit you use only gives you 90 another scheme would be to split the signal and put a 90 degree phase shifter in one path comparing it to the original.

I don't see why this can't be done with one antenna.

Antenna - splitter - 90 phaser (in one path) - to ANC-4 inputs nulls station A followed by another splitter - 90 phaser (in one path) - to ANC-4 inputs nulls station B. No reason you can't keep going with this to null more stations.

Now all that said I think an actual antenna null in its pickup pattern or mixing one antenna output together with another to get the same is a superior way to null a station rather than using a phase mixer. At least you now know how to keep on going nulling more stations with fewer antennas.

> to 30 MHz.

This is not good rational. Every radio AGC has a certain dynamic range and can not make up for poorly received signals. Why you ask? Because the AGC is not designed for a deficient antennas it is to even out a fluctuating signal level. If your antenna is working poorly on a frequency and the signal is very weak the radio AGC will cause it to be amplified more at the IF stages so it can be heard but it will be noisy. Compare this to where the antenna is working well and the radio has to amplify it less and the audio quality will be better.

An analogy would be using a hammer to pound in a screw. Sure it will work but a using a screwdriver would be better.

> IMHO _ The Shortwave Listener like the Amateur who puts the ATU at

> Antenna before the feed-in-line to get the most out of their "Receive
> Only" Antenna.

That actually will not work either with your terminology. These shack tuners are just variable impedance matching units and do not tune the antenna. For amateur transmit use it is better only from the standpoint of reduced coax loss but it does not tune the antenna at its output terminals, it just adjusts (transforms) the impedance so there is no reflection down the coax. Without a larger standing wave due to reflected energy the coax loss will be reduced and that is a good thing in addition to protecting the transmit finals so a tuner at the antenna

instead of in the shack is an improved situation but antenna
performance remains the same.

This would be no help at all on receive.

> it's not science - just my opinion - iane ~ RHF

With antennas you have to do two separate but related things.
1. Bring the antenna to a resonant state.
2. Cause the antenna output impedance to be 50 ohms.

Resonance and output impedance are related but different parameters for each antenna. Each antenna has a nominal output impedance dependent on type that is considered at its resonant frequency or frequency of operation.

This may be your opinion but the subject is a science.

Some take the bible
For what it's worth
When it says that the meek
Shall inherit the Earth
Well, I heard that some sheik
Has bought New Jersey last week
'N you suckers ain't gettin' nothin'
Is Hare Rama really wrong
If you wander around
With a napkin on
With a bell on a stick
An' your hair is all gone...
(The geek shall inherit nothin')

You say yer life's a bum deal
'N yer up against the wall...
Well, people, you ain't even got no
Deal at all
'Cause what they do
In Washington
They just takes care
of NUMBER ONE
An' NUMBER ONE ain't YOU
You ain't even NUMBER TWO

Those Jesus Freaks
Well, they're friendly but
The shit they believe
Has got their minds all shut
An' they don't even care
When the church takes a cut
Ain't it bleak when you got so much
nothin'
(So whaddya do)
Eat that pork

Eat that ham
Laugh till ya choke
On Billy Graham
Moses, Aaron 'n Abraham...
They're all a waste of time
'N it's yer ass that's on the line
(IT'S YER ASS THAT'S ON THE LINE)

Do what you wanna
Do what you will
Just don't mess up
Your neighbor's thrill
'N when you pay the bill
Kindly leave a little tip
And help the next poor sucker
On his one way trip...
SOME TAKE THE BIBLE...
(Aw gimme half a dozen for the hotel
room!)

-Zappa

The ANC-4 gives you the full 360 degrees of phase shift.

Generally the antenna separation gives you some and the ANC-4
supplies the rest to produce a null.

The wanted signals on the other hand don't have the same phase
shift between the antennas, and so are not cancelled with the
unwanted one.

If you use only one antenna, you can indeed null, but it nulls
everything, wanted and unwanted alike.

The trick is to null only what you don't want and not what you do
want.

Convuluted logic, at best.

First of all, Osama Bin Laden was not essential to the 9-11 plot.

Second, may Mr. Clinton would have been able to do a better job for
you if he wasn't being dogged 24/7 by an insane special prosecutor.

Third, when Mr. Clinton got warnings from multiple sources he acted on
them, rather than fleeing the capital.

In general, if you need N antennas to null everything you want to
null, they have to be ``linearly independent,'' which is to say
that there are pathological arrangements that won't work, like
all the antennas in a single line (for more than two). In effect
you lose an antenna.

Yeah, I my thinking wasn't quite right there. Nulling all signals at the same time would not be very useful would it. The phase shifter would have to be frequency dependent for that to work on adjacent channels and even that is no good for two stations on the same frequency.

I sent my Sangean-made CCRadio to the CCRadio store and they put a new
display and TAPR switches in it for $25. But then, I bought it from
them. Not sure they do repairs on radios not bought there.

I seem to recall Clinton shot a rocket at Bin Laden. Missed him by
about 1/2 and hour. Course, the Righties accused Clinton of "wagging
the dog." Now they sit mute while Bush does nothing other than try to
destroy the Constitution.

I am not in the habit (if y'all ever noticed before?) of bashing
people.(I am really a nice auld f... dude,I think I am anyway)
However,ALL poiticians are not real people and they are not human
either.They ALL deserve ALL of the bashing we can shove at them.
Tremors 3: Back to Perfection movie is on Radio tv now.I have to watch
me s...kicker movie.

Sounds like his problem is rectification in corroded metal junctions.
Maybe a little gutter bashing is called for. Also a good check of all
the connectors and splices in the antenna system. And any guy wires,
cyclone fences, roof flashing, telephone wires (used and unused), etc.
Maybe even the telephone, which has all sorts of diodes and is connected
to a lot of wire. Or the TV cable.

I gave up listening to them a little before 05:00 UTC. Their signal was
very good around 03:30 and it steadily worsened the time I listened.
They played what sounded like a Allan Maxwell production that ran
something like 40 or 45 minutes. Before and after that production
several people were chatting on the air. They said the broadcast was
from southern California with low power.

I believe WWZN, Boston is the American station most often heard in Europe on this frequency. Their directional antenna favors your direction. Programming is all sports.

Yeah, it's not hard to stumble across the Chinese jamming on the HF bands. Anywhere that you have Radio Free Asia broadcasting, you can be assured that there's you're gonna get your fill of Beijing Opera. And sure, they go crazy jamming various broadcasts from Taiwan and even some BBC services.

I didn't realize until yesterday, though, that China was in the habit of jamming All India Radio's Mandarin service....heard on 4/29 at 1233 UTC on 15795 kHz

Quite a number the Chinese do with their cultural heritage: using Beijing opera in such an obnoxious and annoying manner.

Iran shows as VOIRI (VOice Islamic Republic Iran?) in
Primetimeshortwave and ILG data.

In the A06 text file at http://www.eibi.de.vu I see it listed as IRIB Teheran.
What does the IRIB stand for?

Thanks for multiple replies. My killfile is gonna block at least one of them.

If we are going to require that the federal government respond rapidly and effectively in the next Katrina-like disaster then we will have to spend the money and time to improve communications between local and federal/military emergency responders.

You can't demand that the emergency responders take over responsibility for the local residents and not give them the tools needed to coordinate a complex rescue effort.

The Federal Government doesn't want to help. They hate poor people.
They have been licking their chops and salivating over the opportunity
to turn Southeast Louisiana into a petrochemical complex/Las
Vegas/Disneyland of the South.

Obviously the States need to go it alone. Glad I live in California.

from 1015 to 1030 UTC English program heard yesterday, 29 April, on 12085 kHz. Weak but intelligible. In my experience, listening over the years from locations in GA & VA, the Voice of Mongolia has always been a difficult one to receive intelligibly in English.

Location: near Mathias, WV. Equipment: E1; 100 feet of wire, strung about 17 feet high, connected to Par 9:1 transformer.

For those interested, the E1 handled the antenna pretty well, although in the evening hours, the preamp at times needed to be turned off to prevent overload. This was the first time that this has been an issue for me w/this radio; previously I had used no longer than a 50 foot antenna.

3086. Andean on 6134.8 kHz

Newsgroup: rec.radio.shortwave
Date: 2006-04-30 17:04:16 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1146416656.014575.214760@j73g2000cwa.googlegroups.com>
Source record: 72293

Heard at 0902 UTC on 6134.8 kHz. Monitored for about 15 mins or so, but didn't hear any ID. Lively talk between male announcer & female announcer, with helpings of Andean music in between. I was getting pretty good copy on this one, so if you're into the Andean stations, this might be one to listen out for in the U.S. mornings.

According to ILG & EIBI listings, R. Santa Cruz (Bolivia) is the only Andean station currently operating at this frequency (varying frequency, acc. to ILG).

Heard in WVa using E1 receiver w/100 foot wire & 9:1 transformer.

Anyone notice that V of Turkey has taken up one of the Beeb's abandoned slots? Voice of Turkey is now on 5975 kHz in English, from 0300-0400. Very nice signal in mid-Atlantic USA. Good move on VOT's part!

Similar to the manner in which R. Netherlands had taken up use of abandoned BBC time slots on 9590 kHz when the BBC eliminated its NAm service in 2001.

I tried a 100 ft antenna with the E1, but it proved to be too much. I get much better results with a 50-65 footer.

Not that this is a problem with the E1...it just wasn't made for big antennas.

On the whole, I would say my results in coupling the E1 w/a 100 footer were pretty decent.

Provided I had the E1's preamp off for most of the evening hours and some of the early morning, I didn't have any problems.

I had the advantage of being in a very quiet location, camping in a national forest. On the downside, being a temporary set up, I had to take it down and head home some 24 hours later! And then return to my home in Northern Virginia where listening is, while okay, nothing like being in a noise-free environment.

I keep planning to get my hands on an SLA battery and again take the R8B off on such excursions, as I've done in the past. Overall, though, I've been fairly pleased with the results of the E1 on weekend outings (it's no R8B of course, but for portable applications it's a great choice, and it's decent on the batteries); consequently the R8B plan keeps getting temporarily shelved.

3108. Grundig 800 Serial number confirmation

Newsgroup: rec.radio.shortwave
Date: 2006-04-30 23:22:45 UTC
From: Mark <mhet@freqhome.net>
Message-ID: <9Fb5g.98147$7a.57030@pd7tw1no>
Source record: 72466

I am thinking about buying a used Grundig Satellit 800. The serial number is S8010008099.

If possible, can the manufacture date be determined by the serial number? If so, is this a better version of the radio compared to others?

Thanks and regards,
Mark

Yeah, you're right. I mean, what's so appealing about the idea of
getting hitched to some young, supple 20 year old woman from the
Philipines with a beautiful face, a nice body, and perhaps a great
personality to boot? Go figure...

ISWL ACTIVITY. The International Shortwave League (ISWL), continues to
celebrate with their 60th (Diamond) Anniversary throughout the month of
May. Look for the following stations to be active:

GB6SWL - Active for three days (May 6-7th and 9th) from Ellesmere Port
in Cheshire. Geof, M0BAU, will be the main operator.
- Active for two weekends (May 13-14th and May 20-21st) from
Walton
on the Naze, Essex. Herbie, G6XOU, will be the main operator.
- Active for three days (May 27-29th) from Kidderminster in
Worcestershire. Tony, G4ZIB, will be the main operator.

GB60SWL - Will be active on Saturday, May 27th, from The Air Training
Corps HQ in Carnoustie, Angus, Scotland. Andy, MM0CXA, will be
the main operator, and several other ISWL members will also
be on the air throughout the day.

Also, look for GX4BJC/P and MX1SWL/P (both ISWL Club callsigns) to be
active throughout May. The ISWL Awards Program is open to non members for
a very small fee to cover postage to any country in the world. For more
details, including QSL information and Special Diamond Anniversay Awards
etc....., see: http://www.iswl.org.uk

S8 for Satellit 800; the following "0" is for the year- 2000; the
following two numbers "10" are for the month of manufacture- October.

I don't know what it tells about the unit; someone else here might be
able to tell you about the supposed "generations" of Sat 800s. In my
opinion, the best indicator of potential quality would lie in whether
or not it was sent to Drake for servicing or refurbishing: if it did
see a shakedown by the Drake folks, I would consider that a plus.

Might be a good idea to drop by the Yahoo! Satellit 800 group. The
folks there might be better able to help you with your question and any
subsequent ones regarding this model.

Brian Hill.A woman in Cajun land.(Louisiana) emailed me and she asked me about dial up ISP's for her computer.I told her fancy arse to look in her phone book for Internet Service Providers.Then,I got to thinking,, I offer them advice,,, why dont I look in my Jackson phone book for,Boxes? I counted about thirty listings in there for Boxes,cardbord boxes,, fiber boxes,,, you name em.You just hang in there,,, I am going to ship it to you.

That's a good thought. I don't own a TV but I live in town surrounded by
them. Also have TV satellite dishes on the roofs around me. Those things
must have local oscillators for the down converters build into them. The
TV's around here are either connected to these satellite dishes or cable.

You're going to point me at the oil-for-food scam and tell me that we had
any effect on their economy with that? You and UNICEF can go sit on a
tin tack with that act. If anything, Iraqi kids have better access to
care and food now.

Now how about a quote from Howard Dean?

1996?! The Clintoon years, long after we kicked Saddam ass the first time
and long before we kicked it the second time.

The "sanctions" against Iraq she's talking about is the oil-for-food scam.
You can't seriously expect anyone with an IQ room temperature (Centigrade!)
or above to believe Iraq's economy was affected; all the facts are out.

The only thing I know for sure is that I must have excessive wax in my
ears. I don't know what my problem was understanding the call as they
had a very nice signal in the beginning. I'm pretty sure I heard them
say both. First they identified KTBF several times and then KCBM
several times, then KTBF or KTBM again all several times. I guess I'm
just confused on this. They also claimed to be in southern California
with "not much power" and they were surprised that they were not
getting much of a response on a web site. I don't exactly remember the
name of the web site. It was something along the lines of
pirate-radio.com

Here is a link to a web board. According to the description it is the
production I heard. Pirate identified as KCBM

Hello Jim

I use a lowe pr 150 and that works perfect for me.
I don't know if you came across such a preselector but it is a nice
peace of equipment

to your blowtorch problems: there are special filters to cut out
certain freq. A guy from the netherlands makes them homself for the
dutch mediumwave stations. I don't know if this tranlation is good but
I would callit : a suction filter

Greetings Han , The netherlands

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

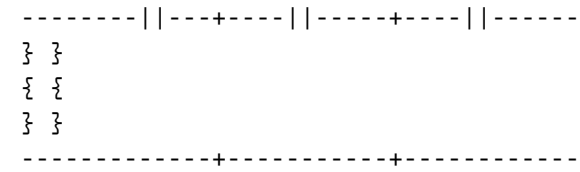
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

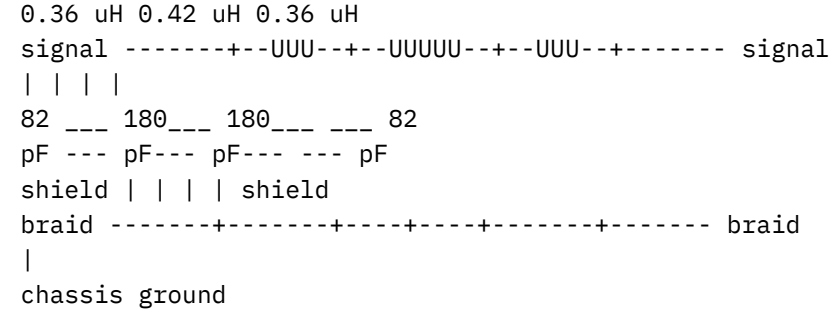
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Lisa, you should like owning a DX-160. I had one for a long time and thought
it was a real nice radio. I have been thinking about looking fo another
one. Let us know how you like yours.

I've had a DX-160 for many years. I was one of my first shortwave receivers. By today's standards it's no big deal but I still like to power it up now and then to reminisce. I use a digital frequency display with mine to provide an accurate readout of the tuning position. I see you've already got some replies on where to get an online manual so I won't repeat them. You can get a lot of help for the DX-160 at the following Yahoo group. It's also good for your DX-302. Do you still have it?

The owner's/user's manual for DX-160 is about the most basic. It goes more into the SW bandplan and what to listen for than it does actual operation of the radio. Except things like, antenna trim--which for anyone with experience with that kind of function...as in your DX-30x...is a no-brainer--the radio is operated intuitively, without any particular skillset required.

The only real advantage to having an owner's manual is the schematic. But since GRE revised the radio between the design and production, and a number of times thereafter, the schematic is no more than a 'typical' and may not reflect actual circuitry in the cabinet. The schematic is little more than a guide.

There are some modifications you may wish to consider to the audio circuitry of DX-160, since the audio is shaped, with most of the lower spectra removed. These mods include replacing audio path ceramic caps with films, and increasing the values of the coupling caps, and one feedback cap on the AF amp. Makes a big difference in the quality of the audio through a decent sized speaker.

Slowing down the AGC a bit will also make a huge difference. As it is from the factory, it's way too fast. Like the Zenith T/0, the DX-160 AGC is way too fast, and way too deep, in order to make the radio seem more sensitive than it really is.

One member here, some years ago, hot rodded DX-160 into his primary DX receiver, with filters, circuitry mods, digital readout, new battery and tires, and turned a casual receiver into something quite the performer.

All that said, it's a fun radio for casual listening. With the same feel and handling as the entry and mid level Hallicrafters'. If you like DX-302, you'll enjoy DX-160.

That's pirate radio for ya. It doesn't have to make sence. They were probably goofing around. Their qht used to be in Oregon? I'll try to dig up some info on them.

''...a draft Report and Order to allow all U.S. AM
stations to use HD Radio at night is reportedly sitting on the
FCC Chairman's desk. Insiders say the document will allow all
stations (with equipment in place) to light up simultaneously.
Hopefully an interference resolution mechanism is included in the
paperwork. Broadcast engineers surveyed on the floor of the NAB
were not optimistic about the long-term prospects of AM HD at
night, but iBiquity investors will undoubtedly make a concerted
effort to make it work.''

Congratulations, you will get a lot of listening enjoyment from that
radio I'm sure. Did it come with the speaker as well?

I acquired an earlier version, the DX150b at an estate sale and found
it to be straightforward to use. The manual (at least mine) did a good
job of explaining how to use bandspread and main tuning. Once you have
that down the rest is easy.

If you make a Bandspread vs Main tuning chart you can accurately tune
to 5 KHz or better every time. Find an ''anchor'' station at the end
of each band. Set the Bandspread to 0 or 100 (as appropriate) when
tuned to said anchor (e.g. WWV on 10.0). Tune bandspread and log
stations with real frequency vs Bandspread indication. Do this for
each band and you'll be able to extrapolate the channels in between.

Graph paper comes in handy.

I have fond memories of the DX-160 I received for Christmas when I was 12 years old or so. I used graph paper to plot known frequencies against the bandspread dial for the various SW bands, allowing me to interpolate unknown frequencies by their associated band spread number. Those were the days :)

3192. DE31/KE31 vs AN-LP1 antennas

Newsgroup: rec.radio.shortwave
Date: 2006-05-01 14:42:40 UTC
From: Charly <no.spam@no.email>
Message-ID: <44561e62$0$21200$636a55ce@news.free.fr>
Source record: 72400

Good afternoon everybody,

I just wanted to add my 2 cents in the debate of Degen DE31 versus Sony AN-LP1...

Of course, I will not repeat what is said on this excellent page (which made me purchased the Sony while I already had the Degen...) :
http://www.radiointel.com/review-degende31.htm

I will just add comments of a user, trying both antennas with a Sangean 909 and a Sony SW100. I also compared with an 8 meters external wire antenna connected to the radios via a 9:1 balun (home-made, so perhaps not that good).

The Degen (also known as Kaito KA31) can give a better signal than the Sony, but this occurs only a few times, more on the upper frequencies. I suspect that this is due to the different tuning methods : the tab-stopped tuning button of the Sony has rather large steps in the upper frequencies : 12000, 14000, 16000 and then direct to 20000 khz. The Degen has continuous tuning, that might help. And this better signal can only be seen on the S-meter. No audible difference can be eared.

But the Sony is far easier to use.

For the initial setup first : the antenna just pops up of its case, then unroll the wire, connect and switch on. That's it. With the Sony radio, you don't even have to switch on the antenna : the radio does it for you... The Degen needs more manipulations due to its design.

For the radio use then, the Sony is easier and more compfortable. When listening a given frequency, just set the AN-LP1 controler to the proper button-tab and that's it. For the Degen, you have to retune frequently. When you don't have an S-meter, then is quite hard to find the best tuning spot on the Degen.

On the average, the Sony generaly gives a better signal, but the Degen is just behind, very close indeed.

I would say that :
- if you have an S-meter on your radio
- if the money is a key factor
- if you are ready to tune the radio AND the antenna when listening
then you should go directly to the Degen/Kaito antenna.

Else, go for the Sony.

For my personnal case : I will use the Degen with the Sangean 909 at home, and use the Sony radio and antenna when travelling (in fact I'm also using the Sony at home...).

About the external wire antenna vs those two loop antennas:

The signal strength was about the same. Depending on frequencies and time I might have RF noise (in an European big city's surburbs) with the wire antenna and not the loops or vice-versa (both loops were consistant on that point)... So in fact this can be a complementary setup.

Again, just my 2 cents...

Charly

(I have no direct or indirect connection with Sony, Degen, Kaito or any other radio manufacturer or web site, etc... This is only my humble opinion and I share it...)

Great review, thanks for taking the time to post it. In your
experience were there signals that could be heard with reasonable audio
quality on one antenna and not the other.

Actually, there are various sign languages, often corresponding to
national languages, and I've been told that although they tend to have
more in common than spoken languages, a person who can speak one can't
necessarily understand the others.

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.
The legistlature is never so well employed as when they
look to the interests of those who are at a distance
from them in the ranks of society. It is their duty
to do so; religion calls for it; humanity calls for it;
and if there are hearts who are not awake to either of
those feelings, their own interests would dictate it.

I feel another anti-Chuck Harder rant coming on ...
Last week, to bring down rising gasoline prices, Chuck Harder proposed that all schools and colleges in the U.S. operate on a four-day-a-week schedule. He also proposed that all retail outlets do the same, except they can stay open one more day.
How kind.
I have concluded that Chuck Harder is not human. He is from another planet. Because only an extraterrestrial would think like this.
OK, I'm buying into Chuck Harder's UFO conspiracies here. But think about it: Why else would he be so obsessed with UFO's and government coverups? Why else are his political and economic policies so out-of-this-world?
Remember, Chuck Harder made his name in radio not because of popularity, but because of a cute little marketing scheme he cooked up called "barter exclusivity" -- the idea that a radio station would trade valuable commercial time (five minutes or so per hour) for Harder's program.
For a struggling, rural AM station, that was an offer too good to pass up.
That is how Chuck Harder managed to get on 300 or so stations by 1995. Then came Oklahoma City, and most figured out he was nuts and consequently dropped him. 9/11 convinced the rest of the holdouts that his "For The People" show was a complete waste of time.
Re TalkStar, Chuck Harder OWNS that network, lock stock and transmitter. He can't fire himself; he can't take himself off the air for health reasons or whatever. Again, very clever, but truly out-of-this-world.
I suspect that Chuck Harder's show is doing very well ... on Mars. To which I say, "Bleep ... bleup ... bloop ... blop!"

Yea, but they run the microprocessor/video processing combo chip on a
multiple of that to simplify the chroma processing. (Or maybe they're
just cheaper). And anything digital, like the satellite systems
the Mon wrote about another post or DVD players, will have a video
display generation hardware that uses the color burst frequency in there
somewhere, if it's designed to feed an older TV set/analog video.

Yes, Hans, that is what I would call it a notch filter. A notch filter is tuned to one frequency. Using a relativly hi Q circuit can fix certain kinds of problems right away. That is if it is coming in on the antenna. Very easy to make with just a few parts.

[...]

ACCORDING TO V-News.org Editor-in-Chief Kevin Alfred Strom, IBOC is an inferior, interference-prone system designed primarily to ensure the dominance of the corporate broadcast media and limit or prevent the rise of new, independent voices on the radio dial. He states:

'IBOC (In-Band On-Channel) digital -- AM or FM -- is essentially a turkey, technically. It's inferior in almost every way to a dedicated digital system in a dedicated digital band.

'The main reason IBOC is promoted is because a new dedicated digital band would level the playing field: the present 250-Watt AM daytimer, once ensconced in the new band, would have just as clear and clean a signal as the 50-Kw clear channel or the high-power FM -- just as good fidelity, the same coverage, and 24-hour operation. Just as your Web site is equally clear and accessible as NBC's.

'A dedicated digital band might also be scalable and allow many more channels for the listener -- hundreds, thousands perhaps. Probably enough to allow public access (in which anyone can be a broadcaster for free or nearly free) on an even greater scale than does cable television.

'And that would mean more competition for the big-money men.

'And it would mean that competition would now be purely on the basis of programming, not the sheer signal superiority which the money-men have paid for.

'They want to preserve the _inferiority_ of their smaller competitors. IBOC does that. They want to maintain the high economic hurdle to becoming a broadcaster. IBOC does that.'

Taking our Message to the Airwaves

Activism; Posted on: 2005-03-05 11:07:57

Make waves (literally): Bypass the controlled media from your home or car; and it's fun, too...

by John Young

AS I MENTIONED in a previous article, the enemies of European mankind are busily setting up the technical prerequisites to totally shut down the Internet for sites that convey information contradicting their lies. There is no way of knowing precisely when this will occur, but with the U.S. Supreme Court now brazenly citing "the weight of International opinion" as justification for its rulings; we can rest assured that the days of freedom on the Internet will be over sometime in the next few years, barring some sort of miracle.

Even without such legal backing, private entities -- and the Internet is owned by private entities -- are deploying a great deal of Israeli-built technology custom-tailored for just such censorship.

We use the Internet now -- because that is what is available to us -- but we need to get ready to use other modes of communication as well.

I am speaking now of both amateur ("ham") radio, and perfectly legal low-power AM broadcasting. Low-power FM broadcasting is under tighter limits that restrict its effective range to about 90 feet, whereas low-power AM broadcasting allows for distances up to 1000 feet, and ham radio allows for literal world-wide communication.

FCC Regulations allow low power AM broadcasting within the following parameters:
1) The total input power to the final stage cannot exceed 100mW.
2) The total length of the transmission line, antenna and ground lead cannot exceed 10 feet.
3) All emissions outside the AM broadcast band must be attenuated by at least 20dB.

Furthermore, as long as such transmitters are constructed for personal use and not re-sold, any U.S. citizen is allowed to have up to five of them at any given time. These can be legally used in both

fixed and mobile applications, and numerous plans for their construction are available on the Internet. Just do a Google search for "micropower AM transmitter." You can also order kits from a number of sources. Using a kit, the level of expertise required is manageable by most people with some mechanical aptitude. For those with a bit of expertise, building your own from published plans is definitely the best approach. It is illegal to build such a device and then sell it.

A logical application for this technology would be to download a variety of American Dissident Voices broadcasts into a portable MP3 player or onto CDs, attach the output of the MP3 or CD player to your transmitter; and then install the transmitter and antenna on your car. Make a bumper sticker with your ink-jet printer, and attach it to the back of your car with a magnet. Make the sticker catchy, and list the frequency. If you have a commute in a congested area, you will get out our message to a lot of people pretty quickly. This could also work quite well in more congested living quarters such as apartment complexes. Distribute some flyers advertising the "community radio" frequency.

You can get as creative with this as you would like. You can download and re-broadcast some of Frank Weltner's National Vanguard Radio Show archives (with his permission -- of course!), intersperse commercials for NationalVanguard.org, and even add some of your own commentary. If you use Linux, there are a host of free programs available for audio production that work pretty well and will let you produce a professional-sounding show with a little practice. You need to keep in mind that you aren't allowed to use profanity in any sort of radio transmission; and you are not allowed to pick a frequency of operation that will interfere with a licensed radio station.

This sort of setup is anonymous as there are no identification requirements. Let this idea bounce around awhile and do a little research to see how you could make it happen.

Meanwhile, I'd like to talk about ham radio.

First, I should disclose that I am a ham and probably a bit more technically inclined than most. I am not, however, employed by NASA or at the Jet Propulsion Laboratory. So as intimidating as ham radio tests may look to people unfamiliar with them; let me assure you that anything I can do, most other people can accomplish given a bit of effort. There are hundreds of thousands of licensed hams in the U.S. You can't broadcast radio programs or make one-way transmissions on amateur radio, but there is nothing (so far) stopping you from discussing any issue with other amateur operators.

Unlike the low-power AM broadcasting mentioned above, ham radio is a federally licensed service. While other classifications of license exist for historical reasons, the only license classes that would be

of interest today are: Technician, General, and Extra.

Technician class licenses allow use of allocated VHF and UHF frequencies using a variety of methods. Probably the easiest activity available to a Technician licensee is to pick up an inexpensive hand-held 2-meter radio and use any of a plethora of repeaters available all over the country. [A repeater is an individual- or club-owned receiver-transmitter arrangement that takes the weak signals from handheld or mobile transceivers and retransmits them with higher power and from (usually elevated) locations with excellent coverage.] Later on, you can even set up your own repeater and share it with your fellow licensed National Alliance members. The trick is this: such conversations are listened to by far more hams than the number actually participating in the conversation. When you and three local National Alliance members start having a conversation on a local repeater, a lot of other hams -- who might never have looked at a flyer -- will hear what you have to say.

Getting a Technician-class license only requires passing a fairly straightforward written test and paying a small testing fee. Plenty of study materials for this and the other tests are available from the American Radio Relay League (ARRL).

General class licenses allow use of everything a Technician license allows, plus access to Morse Code, Voice, and Digital Modes on allocated frequencies that can, literally, be heard world-wide. Except in unusual circumstances, VHF and UHF communications are pretty much line-of-sight, limited to a few dozen miles on average; but the High Frequency (HF) allocations available to hams make use of ionospheric conditions to bounce all over the world. This could allow a license holder to participate in, say, the Liberty Net on 75 meters, or even establish a net specifically for discussion of issues of concern to particular demographic groups.

As with repeaters, a lot of HF hams listen to conversations in which they don't actively participate. So just holding a conversation between members could awaken a lot of people. Likewise, the frequencies and power available to a General Class licensee allow the construction of nationwide and worldwide networks for the reporting of health and other important information. The written test for General Class is a bit more involved than the one for Technician, but careful study of the exam preparation materials is all that is required. The one hurdle that many people find intimidating is the Morse Code requirement. Don't let it spook you: I got the beginner tapes from Gordon West's W5YI Group and in about a week passed the Morse Code test on the first try. I'm no language whiz -- so if I can do it, you can too!

The Extra class license is like the General class license but with more available frequencies. It requires passing a pretty tough test suitable for an advanced electronic technician or maybe engineer. I

can't think of a good reason to get an Extra-class license except for personal interest reasons.

Unlike the low-power AM broadcasting mentioned above, Ham radio is a specifically identified service, meaning you have to use your FCC-assigned call sign as part of any communication. That call sign can be searched on any number of websites, and will return your full legal name, address, and other identifying information. You are not allowed to broadcast or anything of that nature, and FCC rules about interfering with other operators, using profanity and so forth can be quite strictly enforced. So you need to know the rules. But you have to know the rules in order to pass the tests -- so that won't be a big deal. It's all covered in the study guides.

Not everyone has a ham radio in his car, and ham radio gear can get quite expensive -- so ham radio shouldn't be seen as a way to "reach the masses." But it will be an increasingly viable way to disseminate news and information (to other amateurs, who may then speak with others including non-amateurs) as the Internet becomes less free. And amateur operators are an almost all-White group in the United States -- and a somewhat select one at that, since they at least have to pass a simple test.

Speaking of expense -- don't fall for all the advertisements in the ham radio magazines for multi-thousand dollar ham radio transcievers. You don't need that stuff for our purposes here. I am advocating ham radio as a vehicle of communication -- not a sinkhole into which you will discard all of your excess cash!

First off, the best investment anyone can make in his ham radio station is a good antenna, which can usually be built for less than $50 with wire available at a hardware store. Second, all that fancy gear is for well-heeled contesters and is really overkill. Those transcievers come with 100+ page manuals that you have to understand just to fire up the rig; which really isn't necessary.

Over the years, via online auction sites, kits, and homebrewing I have assembled a fully-capable station very inexpensively. Local amateur clubs and Google searches will lead you to many ham radio flea markets (called "hemfests") where used gear is available very inexpensively. If you wind up charging ham radio gear on a credit card you are defeating your own purpose by enslaving yourself to an economy that wants you destroyed. Start small, start affordably. A number of inexpensive and worthwhile kits are available and a lot of hams publish great plans for making your own gear on various web sites. Some amateurs even use the AM mode (on the amateur frequencies, not on the AM broadcast band), which allows shortwave listeners with inexpensive portable sets to eavesdrop on the conversations.

So, now we have two more ways of bypassing the controlled media in order to awaken our people. If you can't get the local radio station

to run ads for National Vanguard -- don't despair -- you can get on the air with your own perfectly legal radio station for less than $50 and bypass the controlled media altogether.

Finally, proof has been uncovered that talk radio host Michael Savage stole the title of his book, "Liberalism is a Mental Disorder," from The Great Frank from Queens!

John of Staten Island and Sheryl from New Jersey show through archive phone calls that Frank used a variation of the phrase on several phone calls to WABC back in the early 1990's. At the time, Michael Savage was living in New York, and listening to a lot of talk radio.

Coincidence?

Download the mp3 and hear for yourself!

This is as it should be. AM stations will never discover or correct nighttime IBUZ interference until they can hear it. Daytime only use of IBUZ won't work. The quality difference between AM analog and digital is more dramatic than FM, especially when loudness wars are likely to continue and the alleged quality improvement will get lost in the dust. The real advantage of the FM system isn't improved quality, it's secondary channels that will compete with their main channels for ad dollars.

In 3006 when there are enough receivers to make a difference, listeners won't tolerate the dramatic drop in audio quality. That would, effectively, make all AMs using the system daytimers as listeners tune away when muddy analog comes back at 6pm..

Now is the time for stations to do whatever rebuilds they need rather than waiting until everyone has to do it at the same time. I've proposed that the first stations to make the required transmitter plant improvements be granted priority over others that might interfere with them. No station should have to modify its plant multiple times as adjacents light up.

Rich

That's the liberal explanation for clear thinking; since liberals have no frame of reference from which to figure out what unmuddied thinking must be like, then clear thinking looks to them like it's been washed.

The Chinese have been building rockets for longer than any other identifiable niche of humanity. What Clinton did for them was to take them off their old system of guidance, which was to point a rocket in the right general direction and time its fall with a WIND-UP MECHANICAL TIMER, and give them sophisticated guidance and targeting systems with which they can accurately nuke New York, Los Angeles and other points.

I used to have a DX160 as well. A really nice radio, the BFO was very
handy. I had it connected to a 75' wire. I had to sell the radio when
I was broke. I really miss it. Maybe some day I will run into one,
and if it still working, I will snatch it up. The only problem I had
with the DX160, was the cord for the tuning broke,(that is the for the
dial pointer) so I used fish line instead. I was able to calibrate it
by tuning into the time stations. The sound quality was okay, and I
used headphones, that were designed for shortwave.

The Man is always up to his dirty little tricks. Let's take a step
back and review the timeline of The Man and the fight against Him in
history:

May 1:

1794 - Cordwainers Unite! The long and turbulent history of America's
labor unions officially began on this day in 1794, as a group of
shoemakers decided to join forces in the battle for wages and
workplace amenities. The shoemakers, who consecrated their new
brotherhood by gathering in Philadelphia, christened themselves the
Federal Society of Journeymen Cordwainers.

1889 - First of May is designated as International Workers Day, in
commemoration of the Chicago's Haymarket riots in 1886. The new
holiday is actually an co-opting of the banned Beltane (Day of Fire),
or May Day, traditionally celebrated by encircling a phallic maypole
with delicious fertile virgins.

It got my DX150B when I was 12 or 13..
Did same thing -- interpolation charts for
the various B.C. bands -- gave me pretty good
resolution down to about 5khz.

Receiver still on 24/7 alongside an R8 and R2000 (Kenwood)

Japan ain't gonna nuke us either.

3250. The Sony AN-LP1 Active Shortwave Loop Antenna -vice- the Degen / Kaito AM and Shortwave Loop Antennas

Newsgroup: rec.radio.shortwave
Date: 2006-05-01 22:17:52 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146521872.338835.192520@i40g2000cwc.googlegroups.com>
Source record: 72354

Charly,

The Sony AN-LP1 Active Shortwave Loop Antenna -vice-
the Degen / Kaito AM and Shortwave Loop Antennas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9295
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9291

The Sony AN-LP1 Active Shortwave Loop Antenna is by-design
designed specifically for the "Metered" Shortwave Bands
{ Tune a Shortwave Band and Set It and Forget It ! - Simple ;-}
SONY AN-LP1 ANTENNA => http://www.rnw.nl/realradio/lp1.html
http://www.universal-radio.com/catalog/sw_ant/3676.html
DESIGN => http://www.universal-radio.com/catalog/sw_ant/3676clos.jpg
PLACEMENT => http://www.universal-radio.com/catalog/sw_ant/3676win.jpg
SEE - Sony AN-LP1 Antenna Manual - Figure "D" and Instructions
http://www.owdjim.gen.nz/chris/radio/an_lp1_service_manual.pdf
TUNING => http://www.universal-radio.com/catalog/sw_ant/3676pre.jpg
With One Shortwave (SW) Band per setting for :
SW Band and Knob Setting
75m = 4 MHz
60m = 5 MHz
49m = 6 MHz
41m = 7 MHz
31m = 10 MHz
25m = 12 MHz
22m = 14 MHz
Then Two Shortwave (SW) Bands per setting for :
19m & 16m = 16 MHz
15m & 13m = 20 MHz
As noted the Sony AN-LP1 Active Shortwave Loop Antenna
performs very well between the
75 to 22 Metered Shortwave Listening (SWL) Bands
with some fall-off in performance between the
19 to 13 Shortwave Listening (SWL) Meters Bands.

TIP - For a Travel 'portable' Shortwave Antenna to use with
a quality Travel 'size' Radio like the Sony ICF-SW7600GR
'portable' AM / FM Shortwave Radio the Sony AN-LP1
'portable' Active Shortwave Loop Antenna :
" Is-A-Winning-Combination ! " - IMHO ~ RHF

WHEREAS -The key defect with the Degen / Kaito AM and Shortwave
'portable' Loop Antennas design is the Tuning Ergonomics.
http://www.universal-radio.com/catalog/sw_ant/1453sys.html

http://www.radios4you.com/antenna-kaito-ka31-LG-photo.html
http://www.radios4you.com/antenna-degen-tg33-LG-photo.html
http://www.universal-radio.com/catalog/sw_ant/1453.html
http://www.radios4you.com/antenna-degen-tg33.html
http://www.radios4you.com/antenna-kaito-ka31.html

IMHO - That tiny little Tuning Wheel is just too small
and too 'iffy' to Tune Accurately and Precisely.
The "Play-with-the-Thing" Factor is annoying.

iane ~ RHF

You are claiming that there are circumstances under which CW can be
understood but none of the newer digital modes can? Assuming, of
course, a skilled operator for CW and appropriate equipment for digital
modes. Or even software for both.

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.
The legistlature is never so well employed as when they
look to the interests of those who are at a distance
from them in the ranks of society. It is their duty
to do so; religion calls for it; humanity calls for it;
and if there are hearts who are not awake to either of
those feelings, their own interests would dictate it.

Sir Lloyd Kenyon, Rex vs. Rusby, 1800

You all may think Rich is a bit off-the-wall about urging 24-hour AM HD _RIGHT NOW_, but why sit around and agonize? Turn it on and the squeaking wheel of night interference will either get fixed or hybrid mode AM HD will be proven unworkable. But the situation needs resolving as soon as possible. Waiting for the laws of physics to change is misguided.

Hi Han,

The Eton E1 has a PAL antenna jack. I did not find the need for a preselector, so none was employed. I did not use a balun, but rather a 9:1 unun.

By the way, great website you have!

Best,

Junius

For One and All,

Experiment With A Copper Ground Pipe Antenna -by- Gerry Vassilatos
http://www.lauralee.com/antenna.htm

REF - Shortwave Listener (SWL) Antenna Group Message
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9303

The Ground (Rod and Wire) as an Antenna ?

The Radio / Receiver 'senses' what it senses across it's
Antenna Terminals and within it's Internal Circuitry.

This may be especially true if the Radio / Receiver
is plugged into the House's AC Power System.

The House's AC Power System represents a Wire Network
of RF Signal gathering potential (HF-AC) and the Ground
Rod (Antenna) and Ground Wire also represent a Wire
Network of RF Signal gathering potential (HF-AC). The
'difference' between the two Wire Networks is detected,
processes and amplified by the Radio /Receiver and thus
we get what we think is a Ground (Rod) Antenna.

Interested in Ground {Geomantic} Antennas ?
Then Check-Out : Geomantic Antenna Group
http://groups.yahoo.com/group/geomanticantenna/
-per- John C. Stumm
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9296

ABOUT - The Geomantic Antenna Group on YAHOO !

Intrigued by the potential of underground radio antennas?
What about natural objects like trees acting as antennas?
Do radio waves propagate using telluric currents?
What frequencies work best?
http://groups.yahoo.com/group/geomanticantenna/

How about tuning into Mother Nature's own radio signals?
What kind of equipment do you need?
What kind of antennas work on such low frequencies?
There's a fascinating world of radio activity in the
range we normally think of as belonging to audio.
http://groups.yahoo.com/group/geomanticantenna/

What about Instrumental Transcommunication
(aka Electronic Voice Phenomena)?
Can common electronic equipment be used to communicate
with discarnate entities?
Is there even such a thing as a discarnate entity?
You be the judge.
http://groups.yahoo.com/group/geomanticantenna/

How about "negative energy"? Does it exist?
Can it be detected... or is it already being detected
and simply going unrecognized?

Colbert, who spoke in the guise of his talk-show character, who
ostensibly supports the president strongly,
urged Bush to ignore his low approval ratings, saying they were based
on reality,
"and reality has a well-known liberal bias."

He attacked those in the press who claim that the shake-up at the White
House was merely re-arranging the deck chairs on the Titanic.

"This administration is soaring, not sinking," he said. "If
anything, they are re-arranging the deck chairs on the Hindenburg."

Colbert told Bush he could end the problem of protests by retired
generals by refusing to let them retire.

He compared Bush to Rocky Balboa in the "Rocky" movies, always
getting punched in the face - "and Apollo Creed is everything else
in the world."

I actually "killfiled" cuhulin and a couple others, now mostly I only see on-topic posts! There's some occasional political crap on here sometimes, but if the thread gets too noisy then I just add another filter based on the subject; this NG is much improved for me! Try adding some filters & see if that helps . . .

Yes, it is supposed to come with the speaker too. Near as I can tell the
only problem is it looks like the knob on the far left seems to have been
replaced, but won't really know until it arrives . . .

Things were so bad that dentists couldn't even get pain killer for the
patients. Hussein himself and all the American corporations who were
flaunting the embargo via subsidiaries certainly didn't suffer.

For One and All,

One XM Receiver-Antenna with Two XM 'Ready' Radios
using the AudioVox CNP-1000 XM Tuner-Antenna Module
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/2861

For Owners of the Eton "E1" AM / FM Shortwave Receiver
with the Optional XM Satellite Radio : Who have the
External AudioVox CNP-1000 XM Receiver-Antenna Module and
an XM Satellite Radio Subscription.

XM ANTENNAS : Two Different 'types' of XM Antennas Systems :

1. The older passive XM Antenna will NOT work with
a newer "XM Ready" Radio.

2. The newer "XM Ready" Intergrated XM Receiver
and Antenna will NOT work with an older XM Radio.

ABOUT - "XM Ready" Intergrated XM Receiver and Antenna
The AudioVox CNP-1000 XM Receiver-Antenna Module
CNP-1000 => http://tinyurl.com/lftub
eBay => http://tinyurl.com/ebln5
Google => http://tinyurl.com/l6qxl

AN IDEA - About the Eton E1 Radio and AudioVox CNP-1000
XM Receiver-Antenna Module : Ideally we would find a
newer XM 'Ready' Radio at a very low {good} price that
will let us Plug-and-Play the XM Receiver-Antenna that
we currently have for the Eton E1 Radios into another
Radio at Home and Work or wherever. This will allow
us to use the same XM 'Ready' Antenna Subscription for
both Radios; and Save Money.

QUESTION - Does Anyone Know of such an XM 'Ready' Radio
besides the Eton E1 Radio that uses can use the
AudioVox CNP1000 XM Receiver-Antenna Module

Trivia
Fagen and Becker decided to name the band "Steely Dan" after a
steam-powered dildo in the William Burroughs novel "Naked Lunch", a
nod to the two being avid readers of 1950's "Beat" literature. Fagen
once explained, "We just wanted to give the band a little more thrust
than most other bands." Fagen and Becker were introduced to Burroughs
by a magazine interviewer and had a cordial ti¿½te-a-ti¿½te, although
Burroughs later confided that he was less impressed with their
artistry than they were with

3321. S350 - same cheap junk as Tecsun/Eton BCL-2000,3000 !

Newsgroup: rec.radio.shortwave
Date: 2006-05-02 13:20:16 UTC

Source record: 72725

Same cheap junk as Tecsun/Eton BCL-2000,3000 !

"Million-Dollar Looks for $100" - Analog w/digital display receivers do not have the stability of digital phase-locked loop (PLL) receivers.

I opened up the back of the radio, before returning it to RadioShack - it was mostly hollow inside, very cheap, low-grade plastic, and with 1960s-grade electronics. The front filter and band switches and tuning knob are flimsy. When putting the radio back together, I was very careful not to over-tighten/cross-thread the screws, but as soon as, one of the screws started to tighten down, the plastic started to crack. Because of the very cheap quality construction, the radio is very light-out-of-the-box, until the 4 "D" size batteries are inserted.

The filters do a minimal job and only muffle the very good audio. The RF gain control can always be set on maximum, so it only acts like a DX/LOC switch. Even the newer model drifts off the tuned frequency, despite a kludged fix, that only causes ergonomic problems - once a frequency locks on, it still drifts, causing one to have to retune way past the desired frequency, to break the lock. The S350 has significant tuning backlash, which is partly responsible for the frequency drift. There are images all over the SW bands, being a cheap, single-conversion superhet. The speaker grill is plastic, the digital readout is low-resolution, the antenna doesn't lock into place, and the carrying handle is cheap, smelly, imitation-leather.

Instead, I bought a Radio Shack AM/FM (for AM DXing) model 12-898 for $25; it has digital PLL tuning (prevents drifting), DX/LOC switch, hi/low tone switch, 3" speaker with metal speaker grill, internal ferrite-bar antenna, lock switch, 20 station memory, almost as sensitive as the S350, and much better quality - even the antenna locks into place.

Don't be fooled by the "Grundig" name - it used to be made in Germany, but is now made in China, by Tecsun/Eton. Check out the Tecsun/Eton brand of this radio on Amazon (same junk), and show, "lowest rating first", also, look at the reviews for Grundig G2000A. Tecsun/Eton is becoming known for marketing jazzy, pretty radios that are poor quality/performers; they bought the rights to market products, under the "Grundig" name, hoping consumers will think they are still made in Germany.

With all that being said, with the restructuring of the 50K watt clear-channel AM stations, in the 1980s, AM DXing is not what it used

to be, in the 1960s and 1970s. For example, many stations out West now have to use directional antennas, that cannot be picked up on the East Coast. All the hype about the CCradio, Superadio III, and S350 being, "DX machines", is nonsense, and with the clear-channel situation, certainly not worth the extra expense. With the Radio Shack receiver, I can easily pick up WWL 870 New Orleans (1000 miles), WHO 1040 Des Moines(900 miles), WABC 770 New York, and my favorite, WLW 700 Cincinnati - same as the S350. These stations can easily be picked up with standard car radios.

For just, as little as $30 more, one could purchase the Sony ICF-SW7600GR instead; it has digital PLL, SSB, and synchronous detection - the ICF-SW7600GR is many times the radio compared to the S350 (I'de be kicking myself, if I was stuck with the S350).

Depends on taste. The 8 mhz bandwidth will have nice audio on AM. 2
mhz might be a little pinched, even for ssb.

Good afternoon John,

No, at least between the two loops : the results were consistants between the two. Only a small difference on the RF noise level (lower on the Sony) and a better quality sound on the Sony. But not a great difference.

The great differences were found between the longwire and the loops as I mentionned, but without clear winner : sometimes the loops win, sometime the wire wins...

I have to wonder why your experience differs so radically from other S350 owners. Maybe you are bored and trolling for attention?

My take on the S350 is that it is a good looking AM/FM radio that also has shortwave coverage. It delivers good sounding reasonably loud audio from non-DX broadcasts and uses just enough controls to get the job done.

I'm not sure what you were expecting on the inside...maybe the circuitry of an R-5000? I'm sure you know that receiver circuits for consumer radios are a fairly mature design and are cranked out in great quantities. But they work and that is what is important.

Of the two models I would pick the S350 over the 3000 for office and nightstand use because it has full AM band coverage.

My experience is quite different. First, the filters do a great job and actually separate stations BETTER than my YB400, but sometimes must use the RF gain control in conjunction with the narrow filter. Noise level is so low that listening to the very weak stations is much BETTER than on my YB400. The RF gain control is a MUST on this radio when trying to get a weak station right next to a very powerful station. By turning down the RF control I can actually receive stations that otherwise do not show up at all.

It sounds like strong signals are swamping the AGC loop. It would have been
better if the AGC only controlled the I.F. strip. They probably needed to
include the RF stage in order to improve dynamic range. With a good design,
you shouldn't need to resort to using the RF gain control in order to
provide satisfactory adjacent channel performance, but this is a budget
radio.
Actually, it isn't too bad of a radio.

Worldspace is the African/Asian satellite audio system. XM and Sirius
are the North American equivalents. I don't know if the equipment
interoperates, but I doubt it.

The channel that Sirius carries is World Radio Network.

It's a $100.00 radio. I knew when I bought mine I was buying a $100.00 receiver, and didn't have expectations of anything else. I was plesantly surprised. I like it. The sound is great, and contrary to a lot of people, I use it a lot for shortwave. Not for DX,ing distant signals, but for listening to programing, it does fine. The drift settles down after a while and I dont find myself haveing to correct it that much, but, I've never seen a shortwave radio I dont like fiddling with the knobs and switches with anyway, so I dont consider it a chore.

Hell, whats SW listening if you cant turn the knobs, flip the switches and just coax the tuning knob just to where you want it. It's all a part of the hobby to me.

I have home theater equpment if I want everything to be DVD & CD sanitized. I just bought a Pioneer 7.1 receiver, and now that it's set up for the room accustics all I have to adjust in the volume. So, I like my shortwave radios to bring me back to the old days of "tuning around" as they used to say.

Oh, and taking the back off, and then cracking it while screwing it back before returning it is pretty tacky IMO. Someome else will probaly buy it after you experimented on it. That sucks.

3344. Degen DE-1107 / Kaito KA-1107 portable shortwave radio - what to expect?

Newsgroup: rec.radio.shortwave
Date: 2006-05-02 19:22:51 UTC
From: Stephanie Weil <stephanienyc@gmail.com>

I've been looking at this radio as sort of a larger version of a "daily use carry around" radio to upgrade from my little J-Win JX-M14 pocket set.

I'm not expecting any great things like I probably should/would from Sony's top-of-the line radio (the ICF-SW7600GR).

I just want something with a dial & needle in order to rapidly surf around the dial for general listening but no hybrid digital radio with an analog looking dial. But I do want something decent.

The dual-conversion feature it advertises seems to be nice. Would this radio be all it's cracked up to be or is it a total dud?

By the way, what are people's opinions on the SONY ICF-SW7600GR ? I'm looking to get that as my "quality portable".

I do collect radios, it seems. :)

Thanks for your help!!

Here's a Yahoo group focused on that receiver. They should be able to comment on performance. To be honest, unless you really want a true analog receiver you might consider something with with a little more advanced circuitry. I happen to like tuning with a rotary knob instead of pushing a button, so the Degen DE1103 filled that bill very nicely for me. And it has both digital and analog displays, dual filters, ssb capability, etc. The DE1103 can be had for about $65.00 delivered so the price is hard to beat.

You are probably right about the source since it is prolific. Digital
chips make things worse by using square waves and the resulting increase
in odd harmonics.

Source record: 72657

Dear Ms. Weil,

I do not believe ANY currently-manufactured portable shortwave receiver which is analog-tuned is truly decent.

Are you sure that the Degen DE-1107 is a dual-conversion receiver? I should be quite surprised if this were to be the case as I haven't seen any analog-tuned SW radio in years that has featured dual-conversion circuitry.

I do not know why you would want another analog receiver but, if this is really your desire, then this radio would probably be all right. Degen's have established a good reputation regarding their quality of construction. (I have never owned a Degen/Kaito product, however.) Also Sony still manufactures a couple of analog-tuned receivers which can be seen on Universal Radio's site and, of course, Eton makes a number of them also, some of which have an analog tuner but a digital readout (NOT a "fake" analog dial). Sangean does too but, from personal experience, I won't recommend purchase of a Sangean-made radio, at least at this time.

Personally, I "gave up" on analog-tuned SW radios a long time ago. The advantages offered by digitally-tuned ones (PLL circuitry) are so clear-cut as to render analog-tuned radios obsolete, in my opinion.

The Sony ICF-SW7600GR is, again in my opinion, the finest small portable shortwave receiver being manufactured today. Both in terms of quality of construction and quality of performance I feel there is no other portable comparable. (I own five of them as well as two copies of the predecessor model the ICF-SW7600G; the 'GR's feature set is much improved over the 'G though performance, quality-of-construction, and durability are the same.)

I also own two Sony ICF-SW35 SW receivers. These are kept in the glove compartments of my two cars, winter and summer. This is a very underrated and often overlooked receiver. While its digital tuning system is not as convenient as most others (it has no direct input keys, for example), and it does not have synchronous detection, its dual-conversion circuitry and filtration is superb, offering very good adjacent-channel rejection as well as excellent image rejection. And its fifty memories plus the ability to "jump" to the bottom of a SW band (giving, in effect, even more memories) are very helpful in tuning this receiver. Sound quality is reasonable, memories never erase (even with batteries removed for years), its scanning function is very good, and its construction/durability is superb. It's a very light radio and

is very easy to use. The price is right too - if you shop carefully, you should be able to buy it for less than $80.00 new.

I do wish you the very best of luck in whatever decision you make and I hope your radios afford you "good listening."

Joe

Source record: 72664

Personal attacks are really unprofessional - the S350 is very cheaply
made, and for $30, on could purchase
the Sony 7600GR, a radio many times better than the S350. The knobs
are flimsy, the speaker grill is
cheap plastic, the antenna doesn't lock into place, the handle is cheap
smelly imitation-leather, the
tuning mechanism is neandertal, even the new model drifts, there is
considerable tuning backlash, and
the list goes on and on. For $100, this radio is all glitz ! Greg

Heard Radio Dubai at 23:15 UTC. Interference, but understandable.
Ethnic music, followed by announcer speaking in Arabic, followed by a
newsreading by a male in English. About S5 on the Satellit 800 off the
whip, here in southern Wisconsin.

3362. Re: Degen DE-1107 / Kaito KA-1107 portable shortwave radio - what to expect?

Dear Jim,

"Jim Hackett" <h-a-c-k-m-...@pcpeople.com wrote:

< Hey Joe, ... I see you said CURRENT models. The TECSUN R-9700DX is dual conversion.. >

I was unaware of this radio which is, indeed, analog-tuned and dual-conversion. I wonder, however, if it is any good. Did you notice that the review, at RadioIntel.com, is practically word-for-word as the blurbs ("exquisite case") on Lipyn's E-bay Store description? There don't seem to be any other reviews - not on eHam nor (of course) in PASSPORT and I definitely have my "doubts" about RadioIntel's review.

In any case, and I don't care how inexpensive (or expensive!) an analog-tuned radio is - I'll NEVER go back. I "paid my dues" using @%#& analog tuning, with its inaccuracies - "what frequency am I on?," drifting, other aggravations, etc., for more years than I want to admit.

In other words, who really needs an analog-tuned shortwave receiver for everyday use? (This, of course, does not apply to "collectibles" and other such radios.)

Give me digital tuning any day, especially as nowadays there is no real price "premium" charged for it.

So I do hope that, since Ms. Weil already has an inexpensive analog-tuned SW radio, she will consider making her next purchase a digitally-tuned one. I'll bet that, after using it for a while, she too will "never go back to analog."

Best,

Joe

Stephanie; You'll probably like the 1107 a lot. It sounds good, works
well, runs forever on batteries, and has a cool dial light. It reminds me a
lot of the old Sony analog 7600 series, and I believe it works just as well
as they did.
I've had the other Degens, and understand why you like analog tuning.
They're all great sets for the money, but when you want to just tune around,
the 1107 is the most fun.

John

Consider the Degen DE1105..

i t has a dial to shuffle through the frequencies

Double reduction
and is shirt pocket size..

- Also have the Jwin JX-m-14

This is way above it in quality. .

http://www.radiointel.com/review-degende1105.htm

I think you may have hit on something. This guy takes the radio apart and is clumsy enough to break the case when reassembling it. So he returns the radio, doesn't tell the seller about the damage and gets a full refund. I think his overly long diatribe against this radio is little more than self-justification for what amounts to petty theft by returning something he damaged for a refund.

This is the same kind of guy that stole the battery cover from an Eton E10 at my local radio shack.

He truly has no sense of responsibility for hs own actions.

This is to extreme a view. The Grundig S350 is not junk but the Sony is
a better radio. The Sony costs more of course.

You take to low a road in order to further discussion. What is your
point when a number of people have already posted their thoughts on this
receiver including myself where I wrote about what I did and did not
like about the radio?

It must be a coincidence. There was a Realistic dx-160 thread a while ago. Today I visited a local second hand store and picked up the same radio.

It's in good shape, with factory external speaker and manual. Price? Seventy dollars Canadian. I was happy and the seller was MORE than happy. It was a good deal all around and now my first 160 has a twin buddy to keep it company.

Life is good.

I used to dig stations out of the noise by backing off on the RF gain
on a Realistic DX150b. It works.

Maybe not radios, but that technique is a lot better than guessing when it comes to old stereo receivers with REAL transformers and heat sinks in them.

Congrats and enjoy! I purchased a somewhat older DX150b with speaker
and manual at an estate auction. The only damage was some paint on the
power cord and a misalignment of the main and bandspread dials. The
misalignment was cured in 5 minutes and what a fun little radio it
turned out to be.

I handled a unit at the store and it did feel cheap. I think $100 is
way too much or our expectations have really gotten low.

I like my E-10. it has nice features. It's user friendly, and the speaker is not to bad. The sensitivity is good, but some say it has a problem with adjacent channel rejection, but I have not noticed it in mine. The wide/narrow filter works pretty well.

When buying these portables, it's important, I think, to keep perspective. You pretty much get what you pay for. They are good for what they are, so keep your expectations within reason, and then, like me, you may be pleasantly surprised.

Recently I bought a Kaito 1103 & the E-10, and took them on vacation, and had a great time comparing them, using different antennas etc. It was a lot of fun, and I did not spend a fortune.

I see two negatives here regarding the Anritsu. One, is the bidder with the private feedback. I'd never bid on an auction with a known flake as one of the bidders. Only a flake has private feedback. So you have this jerk that probably backs out of auctions bidding up the price. Count me out. Period end. Two, the word "clarifier" ought to be mutually exclusive with the price of $6k.

The 3030A looks like a cool toy.

I finally remembered to tune it in and was not able to make it out very
well. Signal level fluctuated dramatically and the announcer sounding
like they were talking in the bottom of a thank. Modulation was a little
on the weak side. All this made it impossible to tell what they were
talking about.

How good is the signal for you? I'll have to try another time in order
to know if this is the usual reception for me. Conditions are good right
now so I'm not hopeful.

I own the 9700DX and it's nice, and pretty accurate. I love mine. I enjoy
analog tuning receivers for just running up and down bands, with nothing
targeted. Reminds me of the old days. . I have never cared much for digital
readout. I own the 7600GR as well, and while it's a nice radio, the lack of

a tuning knob is a drawback, to me that is. I dont use mine much because of that. I prefer the DX-398 over the Sony for several reasons, the main reason, being the two step tuning knob, and the second the display is much better.

I collect them too. I was at the 1107 group recently and asked about the
difference between the 9700DX and the 1107, and a guy told me the 1107 beat
in on sensitivity, so I am going to buy one this weekend I believe. Because
I like the analog dial myself. I love the little 9700DX and if the 1107
beats in on sensitivity, well, I gotta' have one.

> Telamon
> Ventura, California

You made a good point about the 350 being good, and the 7600GR being better, and I agree. And, as you pointed out, there is the price difference too. I own 1 of each, and not only is there a price difference, but there is are intrinsic differences as well.

For example, I did not buy one to do the same job as the other. The Sony is a small SSB receiver, that can be taken easily if you travel. One the other hand, the 350 is the one I can grab by the handle and take outdoors, get a larger sound, be able to grab a big tuning dial and nice sized controls and display. But it would not be an ideal traveling radio.

When I go on vacation, I always take along the Sony as well as a couple of other small portables, but never take the 350. I use them for different needs. I think that is a difference as well as the price.

OK. I wqas thinking of weak but undistorted signals - there seems to be
evidence that digital modes can get through when CW can't even be heard.
Audible but distorted signals, as you mention, are a different problem,
one that I wasn't thinking of. Sort of like those distorted letters you
have to decypher to gain access to restricted Yahoo groups, GoDaddy
domain information, and various other web sites - a machine can
certainly see them, but OCR isn't good enough to read them (neither am
I, sometimes).

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.
The legistlature is never so well employed as when they
look to the interests of those who are at a distance
from them in the ranks of society. It is their duty
to do so; religion calls for it; humanity calls for it;

and if there are hearts who are not awake to either of
those feelings, their own interests would dictate it.

M II - Wow ! - Don't Go Can-A-Duha-ian on Us !

Going from Trashing a Radio and Returning it to the
Store to "sending seventeen million vials of microbially
contaminated Polio Vaccine to Third World countries"
is really going off the deep-end of "linkage" in the Relative
Degrees of two completely different types of Crimes
from what would be considered a minor crime against
property and a Major Criminal Act directed at People.

Now had you tried linking "sending seventeen million
vials of microbially contaminated Polio Vaccine to
Third World countries" to Bill Clinton as Governor
Of Arkansas sending Aids Tainted Blood to Canada
as two relatively equal Major Crimes - Then that
would be a reasonable comparison.

remember we are simply talking about a $100 radio ~ RHF

For One and All,

Got that Car/Truck AM/FM Radio in the Home :
Now You Need an AM/MW Antenna or Two !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9356

So now you have your Car/Truck AM/FM Radio with a
Power Source and Speakers connected to it; and all
packaged in in a nice box of cabinet located in your
Home for some great AM Radio Listening .

All that is left is the... Oops ! The AM/MW Antenna :o)

TWO AM {MEDIUM WAVE} ANTENNAS CHOICES :

VERTICAL 'WHIP' OMNI-DIRECTIONAL ANTENNA :
For General Listening a reasonably good Omni-Directional
Antenna to use with a Car/Truck AM/FM Radio used in a
"Fixed" location; consider using a CB 104" Stainless Steel
Whip Antenna that is mounted on a piece of 21 Foot piece
of Top Rail.
* Locate the Top Rail about 25 to 50 Feet away from
the House and any Utilities.
* A proper Antenna Insulated "Mount" is required to be used
between the Whip and the Top Rail.
* Use a 75 Ohm Coax Cable and Run/Route Coax Cable
50 to 100 Feet of Coax Cable from the Whip Antenna
to the location of the Radio inside the House.
* Connect the Center Wire of the Coax Cable to the Whip
Antenna Element and the Outer Shield to the Top Rail.
* Terminated the Coax Cable with a Motorola Plug.
* The Base (Butt-End)) of this piece of Top Rail
should be 3 to 5 Feet in the Ground using a 6"-8"
Diameter Concrete Anchor and allow the Top Rail to
be Free Standing.

NOTE: The piece of Top Rail is both your Antenna and
Car Radio Grounding Point.

FWIW - The CB Whip Antenna on top of the Top Rail
is also a fairly good Omni-Directional FM Antenna.

DIRECTIONAL AM/MW LOOP ANTENNA :
Another Directional AM/MW Antenna to use with a Car/Truck
AM/FM Radio used in a "Fixed" location is a One-Metre (1m)

AM/MW Loop Antenna.

IMHO - AM/MW DXing "Requires" a Good AM/MW Antenna.
If you are serious about listening to 'distant' Programs
during the Day and Late Night DXing : Then you must
consider building a Large Loop Antenna.

NOTE - Such Large Loop Antennas in the past were called
a Sports Fan's Box Loop Antennas. These are usually
Three to Four Feet Square Box Loop Antenna's that are
'tuned' and 'positioned' indoors, out-side or even in
the Attic for that distant AM/MW Radio Station that
broadcasts the Radio Programs that you wished to Hear.

READ: Back-of-the-Door as a "Super Loop" Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/798
* Use your Closet Door (Back-of-Door) as a "Super Loop" Antenna.
* How to Get Better AM Radio Reception
* AM/MW Antennas and AM/MW Antenna Booster
* AM/MW Loop Antenna Coupler
* Build a Three or Four Foot Box Loop for the AM/MW
Broadcast Band [AMANDX presented by Shawn Axelrod]
* The Australian One Metre (1m) Loop Antenna
-by- Werner Funkenhauser
http://www.hard-core-dx.com/nordicdx/antenna/loop/1mloop.html
http://www.hard-core-dx.com/nordicdx/antenna/loop/rnloop1.gif
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/932
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/862
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/512

The-Bottom-Line: For the Best AM/MW Reception requires
the 'right'AM/MW Radio and matching AM/MW Antenna working
together in "Combination".

Boy, all of you really need to get a life ! Too bad, that the radio is
so cheap that it cracks,
when put back together.. oh well. Radio Shack tried to sell me the old
2003 model, so
you think I care ? I am curious, how many of you are stuck with this
piece of crap radio ?
Sounds like we have some disgruntled S350 owners ! You guys could
have spent $60
and gotten the Degen 1103 - a much better radio. Suckers !

Shortwave listeners will be able to hear once-in-a-lifetime events unfold in the very near future. The final days, long foretold in the bible, will begin next month on date 6/6/6. That's only a few weeks away.

If the prognosticators are correct, Israel - which has nuclear weapons - will launch a preemptive strike against Iran and the world will eventually be plunged into Armageddon. On 6/6/6, the antichrist will reveal himself, and the spiral into a world wide conflagration will begin.

Be sure that your battery-powered receivers are in good working order, because you don't want to miss any of this.

Armageddon: Be there or be square.

Oh yes, I forgot to mention that a couple of small washers fell out, when
I took the radio apart, and I never figured out where they went, except for the trash. Radio Shack tries to recirculate returned items anyway (I have been lied to by salesmen), so do you really think I give a fuck about the radio, or what all of you think ? Radio Shack had plenty of the S350s in back - oh, I wonder why they weren't selling ? Enjoy your S350 pieces of shit, and be sure to let me know, if any of the cheap plastic knobs, or antennas, break off ! Better not take your radios apart !

A 5/8 wave CB whip is 102'', not 104''

If you want car radio type MW antenna performance get an MFJ-1024.
Makes my ICOM R-75 into a mofo. I have mine on top of 2 fence rails
(20' in the air).

Thanks! ... :)

Have any idea why Chuck Harder is still on the air? I mean, his radio program is truly awful. Any other network/radio station would've fired him long, long ago.
If you listened to him at all the past two years, you'd see what I mean. Hey, the bloke doesn't even take callers anymore!
I'm frankly surprised that TalkStar Radio Network hasn't let him go ... unless Chuck Harder owns that network, lock stock and antenna transmitter.
If you go to TalkStar's Web site, though, and click on the contact section, you don't see Chuck Harder's name anywhere amongst the network's hierarchy. So the mystery continues: Why is Chuck Harder still on the air?
Any ideas on this?

Grundig AG is not involved in these products. Eton, formerly Lextronix, bought the rights to the name in North America. But Grundig is neither involved, nor acknowledges these products.

The products are commissioned in California, built by Tecsun, marketed under the Grundig name. The promotional materials distributed about these products imply, and have in the past directly claimed, that German artisans...in one case, the original German craftsmen...are involved in the production of these products.

Rarely has any company gone to such lengths to obscure the true lineage of a product line as has Lextronix, now Eton, done with those bearing the Grundig name.

I see these on Ebay all the time for pretty cheap. How does this radio
compare to my DX394B? I could use another tabletop.

Ah, the sixth of June. It will be a bittersweet day for me I'm sure.

On the one hand it's my oldest daughter's (She was the one who was pulled unconscience from a burning building last month.) 25th birthday, but on the other hand I have an appointment for a root canal that same day. See? Perhaps the festivities will get going in the early afternoon. That way I can plan lunch and a cake with my daughter and then get blown to kingdom come before my late afternoon dentist appointment.

Thanks so much for the heads up there Bruce.

regards,
NEO

Although the DX-394 has it's shortcomings it's still far ahead of the DX-160 in overall performance. The '160' is not a serious table-top by today's standards or even in it's day. It's more of a trip down memory lane now. Consider one of the discontinued table-tops by Kenwood or Drake. In your price range the Kenwood R600 or Drake SW2 would probably be good choices. I'd go for the SW2 which has a great sync' detector for program listening.

Maybe so (or maybe not), but it is *HIS* view.

> The Grundig S350 is not junk

Again, in *his* view, it is. Aren't you "allowing" any opinions that
differ from yours?

> You take to low a road in order to further discussion.

Why is it the "low road"? Just because he ventures his own opinion and
it happens to differ from yours?

> What is your point when a number of people have already posted their
> thoughts on this receiver...

Well, maybe he wanted to post *his* thoughts; just because a "number of
people" have already posted, does that preclude his
thoughts/opinion/posting?

> ...including myself where I wrote about what I
> did and did not like about the radio?

So, is that supposed to be the final say on the matter-- just because
the "great god" Telamon has spoken, that means no one else can venture
an opinion? What a monstrous ego you have!

Please, try and take care of those delusions of grandeur and especially
that hypocrisy.

3450. (OT) : Up-Date - "Rush Limbaugh 'Arrest' Reports Were Bogus !" - NewsWeek

Newsgroup: rec.radio.shortwave
Date: 2006-05-03 20:26:56 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146688016.612351.54530@g10g2000cwb.googlegroups.com>
Source record: 72505

Rush Limbaugh 'Arrest' Reports Were Bogus !
-Source- NewsMax.Com {NewsWeek}

* Even the Liberal NewsMagazine, "NewsWeek",
admitted - the "Arrest" Reports were Bogus.

"LIMBAUGH ARRESTED was the immediate HeadLine on
the Wires and on TV," the NewsWeek said in Monday's
Magazine Edition. "But the Word 'Arrest' was Misleading."

"In fact, Rush Limbaugh had Pleaded "Not Guilty", and his
Lawyer had worked-out a Deal that would cause the single
Charge-to-be-Dropped after 18 Months as long as Limbaugh
Stayed-out of Trouble and Continued to see a Doctor who has
helped him with an Addiction to Prescription Drug Painkillers."

Still, the rest of the Liberal {Left-Wing} Press did its level best
to portray Limbaugh's Voluntary Trip to the Palm Beach County
Jail for a MugShot as if John Dillinger had just been apprehended.

Liberal Press Lies and Media Distortions :

* The CNN HeadLine on Friday Night Blared.
"RUSH LIMBAUGH ARRESTED ON PRESCRIPTION DRUG CHARGE,"

* ABC's "World News Tonight" began its coverage of the Limbaugh
'Case Dismissal' with Elizabeth Vargas announcing: "Rush Limbaugh,
one of the most popular and influential Radio Talk Show Hosts in
America, was ARRESTED in West Palm Beach today. The charges
involve Allegations of Prescription Drug Fraud."

* Other Liberal News Reporters went out of their way to paint
the Talk Radio Host as a common Street Drug User.

NOTE - NewsWeek was one of the few to Note that the Top Talker's
Addiction had Nothing-to-do-with Recreational Drug Use - But was
instead prompted by Intense Back Pain {a Documneted Medial Condition) .

NewsWeek when on to note "Limbaugh's Drug Problems began
after he made a Medical Choice to try to preserve his Radio Voice.
The Doctors wanted to go in through the Back of his Mouth, but
Limbaugh was worried about his Vocal Cords. A different procedure
was performed, and Limbaugh's Suffering-did-not-go-Away. He began
to take Pain Pills in ever-larger numbers."

DA's Office News Leaks :
The West Palm Beach Prosecutor's Office leaked claims to the Press
that Limbaugh took Thousands of Pills -- suggesting not only a Severe
Addiction but that Rush was manipulating his Doctors - "doctor
shopping"
- to Abuse his Prescription Medications.

IN-FACT - Rush Limbaugh's Medical Records, at least the ones turned
over
to State Pprosecutor's Office, showed that the "Doctor Shopping" Claim
was a Sham (a manufactured lie by the Democrat DA's Office) .

IN-FACT - When News of the Conservative Talker's Pain Pill Addiction
first hit the National Enquirer in Oct. 2003, Palm Beach County
Prosecutor
James Martz said going after 'low-level' Prescription Drug Users like
Limbaugh was a waste of time and Tax Payers Money.

>
>
The 160 and the 394 are not much alike, so I would not be able to give you
much of a comparison on the tech side, because I'm not a tech, just a
listenter and hobbyist. I have a 394 now, so to start from there, it's a
nice little receiver, with a good antenna, and the prices are right, the
digital readout is nice, the one I have has a few mods, and I like it pretty
well. The speaker is not very good, so I us an external one. It has the
memories and key pad you wont find in an old analog receiver. All in all,
it's good, but not a world class DX-er.

That said, I really liked a DX-160, because I liked the slide-rule front
panel, the straight forweard knobs and switches and I really liked
bandspread tuning. I cant speak for used ones now, but the new one I had
years ago didn't require an elaborate antenna at all. 20-30 ft of wire
brought the world right to my home.

I also like using sideband on an analog receiver with the long dial. It was very simple. If you were tuning, and hit a sideband signal, it was just a matter of switching and clarifying. I though that was great for some reason. I still miss that. My old Kenwood-R-300 has bandspread, but it's a dual drum and not as easy to set up as the DX-160 was.
(Although I would not trade my R-300 for anyhing, I love that old radio).

If you wanted to try an old bandspread tuning radio for a good price, I would just buy one. Try to find a good clean one with the dial in good clear condition and make sure the bandspread is not broken or defective if possible, because you depend on them. I remember when it dawned on me how to determine where I was on the dial, once you do that, you can't be as accurate as a digital radio, but with practice and patience, you can get real close, as the used to say, maybe just a "scosh" off.

Just a note of nostalgia. A long time ago, when we didn't have digital dials, so we used the time standards to mark our way across the dial and depended on knowing the calibration of our dial, and also, we got to know the different chimes, tones or melodies inernational stations would use to announce the beginning of their broadcast as a sure way of identifying a station, and sometimes we actually had to be patient and wait for the station to identify itslef. That was why log books were vital back then, it was note just your record of what you heard, but where on your dial you heard it. That's jusy my opinion, like I said, not a tech, just a listener.

---This morning, I was listening to Australia on the S350 from my apartment which is not good for reception at all with whip antennas. I only extended the whip about half way, dialed in the Freq, 9.580, sat the radio on the desk behind this desk, and listened for over an hour straight through. I did not have to even turn around to keep adjusting for drift. Loud, clear sound, tone where I wanted it, and the main thing, I enjoyed it. All for a hundred bucks. I like that radio.

DaviD,

"Booking" - Part of the Post Arrested Process is one of
the first steps in standard Criminal Processing.
- - - Booking is the "Record" {Recording} of the Criminal
Charge(s) against the Defendant.

Technically when one 'surrenders' to the Police and is
"Booked" the Individual is being Held-in-Police-Custody
and thus was in-fact simply "Detained-for-Processing"
until Arraignment and Bail could be arranged with the Court.

ARREST - Is 'technically' when the Police Apprehend
you and the Police physically "Take-You-into-Custody"
and most of the Time you get Handcuffed. Handcuffing
is done for Safety of the Police and the Defendant - But
the Act of Handcuffing a Defendant is also part of the
Legal Requirement for the Police to 'physically'
"Take-Custody" of the Defendant by restraining them.

The Arrest is followed by and Arraignment-on-the-Charges
and the Entering of a Plea by the Defendant. "Not Guilty"

Next comes the Criminal Trial - Oops there is a Deal
and there Will be NO TRIAL and in 18 Months the
Record of the Criminal Charge will be dropped from
Rush's Criminal Record.
- - - Except Then He Will Have No Criminal Record [.]

In 18 Months Legally Rush Limbaugh Can Claim :
1 - I was only 'detained' by the Police - Not Arrested.
2 - I was only Charge and Entered a Plea of Not Guilty;
and then was released on Bail.
3 - There was No Criminal Trial and later the Charges
were Dropped [.]
The Bottom Line - IT NEVER HAPPEN [.]

3477. Re: Got that Car/Truck AM/FM Radio in the Home : Now You Need an AM/MW Antenna or Two !

Newsgroup: rec.radio.shortwave
Date: 2006-05-04 02:11:37 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146708697.117940.40130@j73g2000cwa.googlegroups.com>
Source record: 72532

David,

You Need an AM/MW Antenna
- CB Whip Antenna on Top Rail vice Active Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9367

David -Note- " A 5/8 wave CB whip is 102'', not 104'' "
-R- That could be true that they measure out to be 102" vice 104"
-BUT- That would be about a 1/4 WL in the CB or 10m Bands.
CB Low Band 1/4 WL Antenna : = 234 / 26.965 = 104"
CB High Band 1/4 WL Antenna : 234 / 27.405 = 102"

Concerning the MFJ-1024 Active Antenna that covers
50 kHz to 30 MHz. I would agree that a MFJ-1024 is
a good Active Antenna for use with many Radios.
http://www.universal-radio.com/catalog/sw_ant/1132.html
These other Out-Side Active Antennas also could be
use for a good external Antenna with most Radios.
* Sony AN-1 Active Antenna
http://www.universal-radio.com/catalog/sw_ant/2206.html
* Dressler ARA60S Active Antenna
http://www.universal-radio.com/catalog/sw_ant/4061.html
* McKay Dymek DA-100E Active Antenna
http://www.universal-radio.com/catalog/sw_ant/0328.html
* RF Systems DX-10 Professional Active Antenna
http://www.universal-radio.com/catalog/sw_ant/2868.html
* RF Systems DX-One Professional MkII Active Antenna
http://www.universal-radio.com/catalog/sw_ant/1246.html
- - - How ever these do require the use of AC / DC Power
and a simple "CB" (10m) Whip Antenna sitting on top of
a piece of 21 Foot long Top Rail does not.

WHY TOP RAIL ?
The use of the single piece of Top Rail creates :
* A "Free Standing" Antenna Support Structure
with a relative small ground foot print.
* Allows the location of the Antenna Element {The Whip} :
Away-from-the-House or Above-the-Roof and By-Itself.
* A solid 3-5 Foot earth Grounding point for both
the Antenna and Radio.
* Plus it Elevates the Antenna's Whip Element about
twice it's height above ground level 16 to 18 Feet.
TIP - Route the Coax Cable straight down the Top Rail
to ground level and secure it to the Top Rail every

few feet.

ABOUT - The "CB" (10m) Whip Antenna
http://www.eham.net/reviews/detail/5037
http://www.radioshack.com/product/index.jsp?productId=2102428
<http://www.radioshack.com/product/index.jsp?productId=2102428&tab=support>

The most efficient Mobile CB Antenna is the 102" Whip.
If you desire the best performance, the standard 102"
(Quarter Wave Length 1/4WL) Whip Antenna is the answer.

Anyone care to try to write up a tutorial, or point at an existing one, that
explains how to do this magic? My 160 should arrive any day now! : }

How about this evening? Tonight the signal is similar to the previous
evening where the announcer sounds like they are in the bottom of a
tank and the signal fluctuates S2 to S6 but I can make out what is
being said even though it is not pleasant to listen to it.

I can hear a woman say this broadcast is intended for north America and
read the news.

3485. Reception this afternoon and evening May 3rd

Newsgroup: rec.radio.shortwave
Date: 2006-05-04 03:27:19 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-2A3D48.20271803052006@newsclstr02.news.prodigy.com>
Source record: 72540

Reception this afternoon was exceptional, especially toward the south. I heard many central and south American stations on the 17, 15, 13, and 11 MHz bands.

Heard Japan on 17825 and 21670. I don't usually hear the 21 MHz band signal all that well but it was very strong today. They have two streams and I liked the music a lot better on the 21 MHz band.

Trolling the 9 MHz band I happened across Hungary's Radio Budapest on 9795 for the 02:45 to 03:00 UTC broadcast in english with a very good signal.

Conditions are unusual in that I can get CHU on 3330 and 14670 but not 7335 just a little while ago in the 02:00 to 03:00 UTC time frame.

WWV received on 2.5, 5, 10, and 15 MHz was received at the same time as CHU above all strong signals. As usual these days no sign of WWV on 20 MHz morning, noon or night except for a couple of days the other week.

I know you are trying and failing to be a clever poster but the concept
of returning an item to a store is to return it the new condition with
all the packing so it can be resold as a retuned item at a discount. If
you opened it up and cracked the case you should not have returned it.

Lisa, first, you will want to find the WWV signals at 5, 10, 15 Mhz, if they are accurate, then your main tuner is aligned, and will give your point of reference. Use the band selector to chose which band you are going to tune.

On the long scale along with the regular frequency numbers there will be some colored "marks" resembling diamond shapes, if I remember right. Set the main tuner on one of the marks to tune a Meter band. Then, with the bandspread dial all the way to zero, you will begin to tune slowly across the band, when you find the station or signal, note where on the bandspread you are. It's not really to hard to do.

Also, on the main tuner, (long scale), it's marked in MHz, so, for example, between 9 & 10. You know halfway, you will be at 9.50 MHz. Halfway between 9 & 9.5, you will be at 9.25 on the dial, just keep that in mind when just using the main tuner alone.

Hopefully, you can obtain a good copy of a uers manual. There are usually some manuals for sale on E-bay. The use of the receiver controls is a snap, because they are right in your face, but it will give you the information about the color of the marks for the meter bands, because I cant remember the color's now. It will also give you the detail of setting up the meter band better than I can, it's been along time since I had one sitting in front of me.

The dial on the Dx-160 is beautuful when lit, because it's all color coded. I think you will enjoy many hours of SW listening on it. Once you get the hang of bandspread truning, I think you will enjoy the challenge. I still do on my old Kenwood R-300. I hope this will help you somewhat.

I'm listening to Radio Cairo right now at 03:45 UTC on 11950 KHz playing
middle eastern music and I guess Arabic. Coming in S9 with the folded
dipole cut for that band. They sound like they are in the bottom of a
tank but otherwise good signal.

< Snip >

I played with one in radio shack and it was picking up short wave
stations in the back of the store where you usually don't pick up
anything. I thought the sound was very good from the radio. The only
thing that bothered me was the tuning slow speed is to fast for my taste
and I would want it geared down some more. Well, that and the drift but
that is supposed to be fixed on the deluxe version.

For those interested in receiver specs, Bob Sherwood has added to and
updated his interesting list of receiver specs.
Still nothing to beat the AOR 7030..!!
Receivers listed are from the oldies like the Kenwood R-600 all the way up
to the most exotic offerings.
See http://www.sherweng.com/table.html
The receivers are ranked according to their "Dynamic Range narrow spaced"
which is one of the most important parameters for that really serious DX of
signals with adjacent channel interference.

Don't take the specs too seriously though, as a good DX friend of mine runs
rings around me when it comes to exotic DX results and he has a modest Yaesu
FRG-7 (Frog) that he swears by.

Famous shortwave portable of the past. it was the first low cost radio that had 5 kHz readout and could be used to DX. I bought one of the first available in the US in 1976 ! I am not selling that one even though I still have it ! I am selling an extra one that I have.
many 5900's have the battery door missing. this one HAS THE DOOR. a lot of them have the pop up whip broken. this one HAS A GOOD WHIP. many have a broken S-meter, THIS ONE WORKS. also has the carry strap. overall condition is very good.
fully tested by one of the leading experts on the 5900, ME. I have checked all the typical problem areas and have disassembled the 5900 and done a complete checkup and tune up as needed.
price is $135 plus shipping. email me for pics.

For those that are wondering. the RF-2200 came out shortly AFTER the 5900 in the US and the price was about 50% higher.

3496. Ok ... now what do I do with it?

I agree about not taking specs too seriously. Specs deserve respect and
definitely have their place, but it's amazing how little correlation
there sometimes is between what you read in a set of specs and what
happens when you turn the receiver on and connect a good antenna.

Steve

Excellent advice. Receiver specs are one way of narrowing the list of
receivers to pick from, but focusing on one spec can really lead you
astray. Many other issues are involved in choosing a receiver for use
and simple items like ergonomic design and audio quality are often
overlooked in the search for the receiver with the best spec.

And the finest receiver in the world is no substitute for knowlege of
the bands, how tie the receiver properly to one or more antennas, etc.

If I recall correctly the markings on the bandspread dial were only
"accurate" for the amateur bands. There was a chart at the back of the
manual for conversion to the sw bcst bands.

Somewhere I have a PDF of the dx160 user manual, If I can find it, I will
post it for D/L.

I'm pretty sure it was the broadcast bands.

But you folks act like you've never heard of Crystal Calibrators?

Most folks had a box, or built into their receiver, a 100 kHz crystal
oscillator, designed to produce harmonics all across the band, trimmed
to WWV so it could tell you where you where.

Back in the '70s, when digital divider ICs became common, projects to
build them were in just about every electronics magazine that produced
even more useful frequencies, like 1 MHz, 100 kHz, and 25 kHz modulated
with an audio tone so they were easy to find, all done with a chip or
three.

David - - - Asked and Answered - - - RHF

The most efficient Mobile CB Antenna is the 102" Whip.
If you desire the best performance, the standard 102"
(Quarter Wave Length 1/4WL) Whip Antenna is the answer.
http://www.signalengineering.com/ultimate/mobile_antennas.html
-per- Signal Engineering

5/8 Wavelength Vertical "CB" Antenna {11 Meters}
The 5/8 WaveLength rating the Antenna is about 22 Feet
long (5/8 of 36 feet).
http://www.signalengineering.com/ultimate/verticals.html
Also show are the Half WaveLength (1/2 WL) Vertical
and the Ground Plane Antenna.

Doing the Math : for "CB" 11 Meters
- - - 11 x 3.28 Feet = 36.08 Feet
1/4 ~ 9 Feet
1/2 ~ 18 Feet
5/8 ~ 22.5 Feet
3/4 ~ 27 Feet

>should be quite surprised if this were to be the case as I haven't seen
>any analog-tuned SW radio in years that has featured dual-conversion
>circuitry.

Hi Joe, yes that is what the manufacturer says. Dual conversion.

I do plan on getting that top-of-the-range Sony as my "main" portable -
when I want to do some hard-core listening (I especially want to start
trying my luck at catching radiostations broadcasting in SSB).

As for getting the analog-tuned DEGEN, I plan on just getting a decent
analog-tuned receiver for when all I feel like doing is drifting around
and catching a religious talk show or whatever other AM signal is
floating around (especially during travel where I wouldn't want my nice
Sony to get lost or dinged around).

Thanks for your help, everyone! :)

Steph

3525. AFRTS (USA Armed Forces radio) on Shortwave?

Newsgroup: rec.radio.shortwave
Date: 2006-05-04 19:45:41 UTC
From: Stephanie Weil <stephanienyc@gmail.com>
Message-ID: <1146771941.696072.265010@e56g2000cwe.googlegroups.com>
Source record: 72579

According to this website, there's an AFTRS facility broadcasting on
SW out of some areas in the USA, but it's on SSB instead of regular AM.

http://myafn.dodmedia.osd.mil/radio/shortwave/

This is one of my primary reasons for wanting a good radio that can
pick up SSB

Is this page still accurate? Has anyone in the USA ever heard these
broadcasts and can report back on the signal quality?

Thanks!

Stephanie Weil

I only have one reaction

as well ILG, Eike B, HFCC, english lang list publish their data in a
format your spreadsheet can handle.

That's why I asked some locals if they need some volunts for a new, free
emwg, with no hassle ...

In fact, for a programmer, it is _easy_ to strip html/pdf and make a
spreadsheet out of it ...

If you want to earn mony ... make Apple computers ... ;-)

(for the english speaking: The author of the emwg says he will no longer
publish his emwg if I use it that way ... (I have done an effort
myself... less than 2 hours)).

If we all volunteer, we'll get more out of this life !

He is one of a small handful of individuals that are abusive and end up
in everyones kill file.

Then went they no longer get a response to the Trolling they come back
with a new handle. They think they are clever by using free mail
accounts and then use that to get a web based Usenet provider to hide
but if they annoy someone enough to make the effort they have their
service terminated, it just take two steps instead one.

There are a few with their own news servers but they get shut down
faster because you just go right to their IP provider or Internet
provider depending on the arrangement.

Same abuse, different day.

Is there any reason why AFN doesn't broadcast in regular AM mode on
these freqs?

If they did, then their target audiences wouldn't need higher-priced
specialty receivers to tune them in. They could do it on any SW radio.

Your views sought there or here

\Even more explosively, Luxenberg suggests that the Koran has its basis in the texts of the Syriac Christian liturgy, and in particular in the Syriac lectionary, which provides the origin for the Arabic word "koran". As one scholarly review observes, if Luxenberg is correct the writers who transcribed the Koran into Arabic from Syriac a century and a half after Muhammad's death transformed it from a text that was "more or less harmonious with the New Testament and Syriac Christian liturgy and literature to one that [was] distinct, of independent origin"[17]. This too is a large claim.

It is not surprising that much textual analysis is carried out pseudonymously. Death threats and violence are frequently directed against Islamic scholars who question the divine origin of the Koran. The call for critical consideration of the Koran, even simply of its seventh-century legislative injunctions, is rejected out of hand by hard-line Muslim leaders. Rejecting calls for the revision of school textbooks while preaching recently to those making the hajj pilgrimage to Mount Arafat, the Grand Mufti of Saudi Arabia told pilgrims that "there is a war against our creed, against our culture under the pretext of fighting terrorism. We should stand firm and united in protecting our religion. Islam's enemies want to empty our religion [of] its content and meaning. But the soldiers of God will be victorious"[18].

All these factors I have outlined are problems, for non-Muslims certainly, but first and foremost for Muslims themselves. In grappling with these problems we have to resist the temptation to reduce a complex and fluid situation to black and white photos. Much of the future remains radically unknown to us. It is hard work to keep the complexity of a particular phenomenon steadily in view and to refuse to accept easy answers, whether of an optimistic or pessimistic kind. Above all else we have to remember that like Christianity, Islam is a living religion, not just a set of theological or legislative

propositions. It animates the lives of an estimated one billion people in very different political, social and cultural settings, in a wide range of devotional styles and doctrinal approaches. Human beings have an invincible genius for variation and innovation.

Considered strictly on its own terms, Islam is not a tolerant religion and its capacity for far-reaching renovation is severely limited. To stop at this proposition, however, is to neglect the way these facts are mitigated or exacerbated by the human factor. History has more than its share of surprises. Australia lives next door to Indonesia, the country with one of the largest Muslim populations in the world[19]. Indonesia has been a successful democracy, with limitations, since independence after World War II. Islam in Indonesia has been tempered significantly both by indigenous animism and by earlier Hinduism and Buddhism, and also by the influence of sufism. As a consequence, in most of the country (except in particular Aceh) Islam is syncretistic, moderate and with a strong mystical leaning. The moderate Islam of Indonesia is sustained and fostered in particular by organisations like Nahdatul Ulama, once led by former president Abdurrahman Wahid, which runs schools across the country, and which with 30-40 million members is one of the largest Muslim organisations in the world.

The situation in Indonesia is quite different from that in Pakistan, the country with one of the largest Muslim populations in the world. 75 per cent of Pakistani Muslims are Sunni, and most of these adhere to the relatively more-liberal Hanafi school of Islamic jurisprudence (for example, Hanafi jurisprudence does not consider blasphemy should be punishable by the state). But religious belief in Pakistan is being radicalised because organisations, very different from Indonesia's Nahdatul Ulama, have stepped in to fill the void in education created by years of neglect by military rulers. Pakistan spends only 1.8 per cent of GDP on education. 71 per cent of government schools are without electricity, 40 per cent are without water, and 15 per cent are without a proper building. 42 per cent of the population is literate, and this proportion is falling. This sort of neglect makes it easy for radical Islamic groups with funding from foreign countries to gain ground. There has been a dramatic increase in the number of religious schools (or madrasas) opening in Pakistan, and it is estimated that they are now educating perhaps 800,000 students, still a small proportion of the total, but with a disproportionate impact[20].

These two examples show that there is a whole range of factors, some of them susceptible to influence or a change in direction, affecting the prospects for a successful Islamic engagement with democracy. Peace with respect for human rights are the most desirable end point, but the development of democracy will not necessarily achieve this or sustain it. This is an important question for the West as well as for the Muslim world. Adherence to what George Weigel has called "a thin, indeed anorexic, idea of procedural democracy"[21] can be fatal here. It is not enough to assume that giving people the vote will automatically favour moderation, in the short term at least[22].

Moderation and democracy have been regular partners in Western history, but have not entered permanent and exclusive matrimony and there is little reason for this to be better in the Muslim world, as the election results in Iran last June and the elections in Palestine in January reminded us. There are many ways in which President Bush's ambition to export democracy to the Middle East is a risky business. In its influence on both religion and politics, the culture is crucial.

There are some who resist this conclusion vehemently. In 2002, the Nobel Prize Economist Amartya Sen took issue with the importance of culture in understanding the radical Islamic challenge, arguing that religion is no more important than any other part or aspect of human endeavour or interest. He also challenged the idea that within culture religious faith typically plays a decisive part in the development of individual self-understanding. Against this, Sen argued for a characteristically secular understanding of the human person, constituted above all else by sovereign choice. Each of us has many interests, convictions, connections and affiliations, "but none of them has a unique and pre-ordained role in defining [the] person". Rather, "we must insist upon the liberty to see ourselves as we would choose to see ourselves, deciding on the relative importance that we would like to attach to our membership in the different groups to which we belong. The central issue, in sum, is freedom".[23]

This does work for some, perhaps many, people in the rich, developed and highly urbanised Western world, particularly those without strong attachments to religion. Doubtless it has ideological appeal to many more among the elites. But as a basis for engagement with people of profound religious conviction, most of whom are not fanatics or fundamentalists, it is radically deficient. Sen's words demonstrate that the high secularism of our elites is handicapped in comprehending the challenge that Islam poses.

I suspect one example of the secular incomprehension of religion is the blithe encouragement of large scale Islamic migration into Western nations, particularly in Europe. Of course they were invited to meet the need for labour and in some cases to assuage guilt for a colonial past.

If religion rarely influences personal behaviour in a significant way then the religious identity of migrants is irrelevant. I suspect that some anti-Christians, for example, the Spanish Socialists, might have seen Muslims as a useful counterweight to Catholicism, another factor to bring religion into public disrepute. Probably too they had been very confident that Western advertising forces would be too strong for such a primitive religious viewpoint, which would melt down like much of European Christianity. This could prove to be a spectacular misjudgement.

So the current situation is very different from what the West confronted in the twentieth century Cold War, when secularists, especially those who were repentant communists, were well equipped to

generate and sustain resistance to an anti-religious and totalitarian enemy. In the present challenge it is religious people who are better equipped, at least initially, to understand the situation with Islam. Radicalism, whether of religious or non-religious inspiration, has always had a way of filling emptiness. But if we are going to help the moderate forces within Islam defeat the extreme variants it has thrown up, we need to take seriously the personal consequences of religious faith. We also need to understand the secular sources of emptiness and despair and how to meet them, so that people will choose life over death. This is another place where religious people have an edge. Western secularists regularly have trouble understanding religious faith in their own societies, and are often at sea when it comes to addressing the meaninglessness that secularism spawns. An anorexic vision of democracy and the human person is no match for Islam.

It is easy for us to tell Muslims that they must look to themselves and find ways of reinterpreting their beliefs and remaking their societies. Exactly the same thing can and needs to be said to us. If democracy is a belief in procedures alone then the West is in deep trouble. The most telling sign that Western democracy suffers a crisis of confidence lies in the disastrous fall in fertility rates, a fact remarked on by more and more commentators. In 2000, Europe from Iceland to Russia west of the Ural Mountains recorded a fertility rate of only 1.37. This means that fertility is only at 65 per cent of the level needed to keep the population stable. In 17 European nations that year deaths outnumbered births. Some regions in Germany, Italy and Spain already have fertility rates below 1.0.

Faith ensures a future. As an illustration of the literal truth of this, consider Russia and Yemen. Look also at the different birth rates in the red and blue states in the last presidential election in the U.S.A. In 1950 Russia, which suffered one of the most extreme forms of forced secularisation under the Communists, had about 103 million people. Despite the devastation of wars and revolution the population was still young and growing. Yemen, a Muslim country, had only 4.3 million people. By 2000 fertility was in radical decline in Russia, but because of past momentum the population stood at 145 million. Yemen had maintained a fertility rate of 7.6 over the previous 50 years and now had 18.3 million people. Median level United Nations forecasts suggest that even with fertility rates increasing by 50 per cent in Russia over the next fifty years, its population will be about 104 million in 2050-a loss of 40 million people. It will also be an elderly population. The same forecasts suggest that even if Yemen's fertility rate falls 50 per cent to 3.35, by 2050 it will be about the same size as Russia - 102 million - and overwhelmingly young[24].

The situation of the United States and Australia is not as dire as this, although there is no cause for complacency. It is not just a question of having more children, but of rediscovering reasons to trust in the future. Some of the hysteric and extreme claims about global warming are also a symptom of pagan emptiness, of Western fear when

confronted by the immense and basically uncontrollable forces of nature. Belief in a benign God who is master of the universe has a steadying psychological effect, although it is no guarantee of Utopia, no guarantee that the continuing climate and geographic changes will be benign. In the past pagans sacrificed animals and even humans in vain attempts to placate capricious and cruel gods. Today they demand a reduction in carbon dioxide emissions.

Most of this is a preliminary clearing of the ground for dialogue and interaction with our Muslim brothers and sisters based on the conviction that it is always useful to know accurately where you are before you start to decide what you should be doing.

The war against terrorism is only one aspect of the challenge. Perhaps more important is the struggle in the Islamic world between moderate forces and extremists, especially when we set this against the enormous demographic shifts likely to occur across the world, the relative changes in population-size of the West, the Islamic and Asian worlds and the growth of Islam in a childless Europe.

Every great nation and religion has shadows and indeed crimes in their histories. This is certainly true of Catholicism and all Christian denominations. We should not airbrush these out of history, but confront them and then explain our present attitude to them.

These are also legitimate requests for our Islamic partners in dialogue. Do they believe that the peaceful suras of the Koran are abrogated by the verses of the sword? Is the programme of military expansion (100 years after Muhammad's death Muslim armies reached Spain and India) to be resumed when possible?

Do they believe that democratic majorities of Muslims in Europe would impose Sharia law? Can we discuss Islamic history and even the hermeneutical problems around the origins of the Koran without threats of violence?

Obviously some of these questions about the future cannot be answered, but the issues should be discussed. Useful dialogue means that participants grapple with the truth and in this issue of Islam and the West the stakes are too high for fundamental misunderstandings.

Both Muslims and Christians are helped by accurately identifying what are core and enduring doctrines, by identifying what issues can be discussed together usefully, by identifying those who are genuine friends, seekers after truth and cooperation and separating them from those who only appear to be friends.

This probably won't be all that helpful to you because I'm on the other
coast but I have come across a few of them from the pacific area.
Hawaii on 10320 KHz comes in most days as does 12133.5 KHz from Key west
Florida. Florida might be a good one for you as would Puerto Rico but I
see that 7507 is not on that schedule anymore.

In the past I have gotten all the locations except Diego Garcia.
Recently I came across 10320 and 12133.5 so I know those are current.

Maybe Iceland on 13855, 7590 would be your best bet. According to ILG
list Iceland also used to have 7525, 9340, 9980 so you might try those.

SSB gets through better than AM with the same power. Saves power on the
transmit end and on receive the IF filter is narrower lowering the noise
floor improving the signal to noise ratio.

I'll forgive you for being an ND fan. I went to
UD in the Donoher/Digger Phelps era. That said,
Charlie Weis is a class act.

Personally, I'd expect Duke to be the next one
rather than ND.

No, it's really 7812.5. Shortwave and amateur radios are calibrated
differently than commercial, marine and miltitary ones.

You are used to setting USB freqencies to the carrier (bottom) which is at
7811. The frequency listed is the CENTER frequency which is what their
radio is calibrated to.

Look up 60 meter ham band frequencies for an explanation.

Geoff.

Their target audience is millitary personel who aren't supposed to liste
n on private radios anyway. They don't have a broadcast license nor do
they pay broadcast royalties.

In fact, all shortwave transmission was dropped by the AFN in favor of
satelitte feeds. Obviously there was a need to bring it back.

Geoff.

OK, so here is the truth about Mikey Gaukin III. More criminal records are available that show what a low life, common, moron criminal this guy Gaukin is. We'll be posting the very soon if this thread keeps going. We'll be posting where he lives, where he works, his home numbers, you name it, THE TRUTH about Mikey Gaukin III is about to be revealed for everyone to see.

This slimy slanderous thread about a good person, Kracker, is but a continuation of his petty vandalism and juvenile criminal tendencies.

I have a Drake, AOR, and Ten-Tec radios that all tune to the frequencies
listed without some offset. DxAce owns Drake radios.

Eton E1

NOTE: Watch out - the batteries blow up, when used with the AC adaptor !

So, what is the point of plopping down $500 for this radio - there is not much of interest on shortwave anymore, one can buy a $25 Radio Shack model 12-898 digital PLL AM/FM radio for AM DXing (THE E1 DOESN'T EVEN HAVE AN INTERNAL FERRITE-BAR ANTENNA, OR COME WITH A SATELLITE ANTENNA !), and one can buy a satellite radio for $50, now. Also, after getting $500 in-the-hole, one gets to shell out a monthly fee for satellite radio, plus an activation fee - a bigger ripoff than cable T.V. ! Evidentually, there are major technical problems with the actual satellites, so its future is in question !

So, what is the bottom-line ? Well let's see, $500 for the radio, probably another $100 - $200 for the AM and satellite external antennas, $9 - $12 monthly fee, and the activation fee. Is this another blunder by Grundig/Eton/Tecsun, or a total ripoff - I suspect a bit of both !

This baby, I believe, is assembled in India, while the rest of the Grundig/Eton/Tecsun junk is made in China. I wonder, if the E1 is as cheap as, the Grundig S350 ?

3547. Re: Grundig S350 Good or really Bad?

Same cheap junk as Tecsun/Eton BCL-2000,3000 !

"Million-Dollar Looks for $100" - Analog w/digital display receivers do not have the stability of digital phase-locked loop (PLL) receivers.

I opened up the back of the radio, before returning it to RadioShack - it was mostly hollow inside, very cheap, low-grade plastic, and with 1960s-grade electronics. The front filter and band switches and tuning knob are flimsy. When putting the radio back together, I was very careful not to over-tighten/cross-thread the screws, but as soon as, one of the screws started to tighten down, the plastic started to crack. Because of the very cheap quality construction, the radio is very light-out-of-the-box, until the 4 "D" size batteries are inserted.

The filters do a minimal job and only muffle the very good audio. The RF gain control can always be set on maximum, so it only acts like a DX/LOC switch. Even the newer model drifts off the tuned frequency, despite a kludged fix, that only causes ergonomic problems - once a frequency locks on, it still drifts, causing one to have to retune way past the desired frequency, to break the lock. The S350 has significant tuning backlash, which is partly responsible for the frequency drift. There are images all over the SW bands, being a cheap, single-conversion superhet. The speaker grill is plastic, the digital readout is low-resolution, the antenna doesn't lock into place, and the carrying handle is cheap, smelly, imitation-leather.

Instead, I bought a Radio Shack AM/FM (for AM DXing) model 12-898 for $25; it has digital PLL tuning (prevents drifting), DX/LOC switch, hi/low tone switch, 3" speaker with metal speaker grill, internal ferrite-bar antenna, lock switch, 20 station memory, almost as sensitive as the S350, and much better quality - even the antenna locks into place.

Don't be fooled by the "Grundig" name - it used to be made in Germany, but is now made in China, by Tecsun/Eton. Check out the Tecsun/Eton brand of this radio on Amazon (same junk), and show, "lowest rating first", also, look at the reviews for Grundig G2000A. Tecsun/Eton is becoming known for marketing jazzy, pretty radios that are poor quality/performers; they bought the rights to market products, under the "Grundig" name, hoping consumers will think they are still made in Germany.

With all that being said, with the restructuring of the 50K watt clear-channel AM stations, in the 1980s, AM DXing is not what it used to be, in the 1960s and 1970s. For example, many stations out West now have to use directional antennas, that cannot be picked up on the East

Coast. All the hype about the CCradio, Superadio III, and S350 being, "DX machines", is nonsense, and with the clear-channel situation, certainly not worth the extra expense. With the Radio Shack receiver, I can easily pick up WWL 870 New Orleans (1000 miles), WHO 1040 Des Moines(900 miles), WABC 770 New York, and my favorite, WLW 700 Cincinnati - same as the S350. These stations can easily be picked up with standard car radios.

For just, as little as $30 more, one could purchase the Sony ICF-SW7600GR instead; it has digital PLL, SSB, and synchronous detection - the ICF-SW7600GR is many times the radio compared to the S350 (I'de be kicking myself, if I was stuck with the S350).

Yep, and all the other freq's come in correctly as listed. The one they made a mistake with on that list is 7812.5, and if that one is indeed 'correct', then ALL the others would then be listed incorrectly for 'commercial, marine and miltitary' radios.

We'll let Mr. Mendolson play semantics though :-)

I have some old pliers here which were designed and made just for the very purpose of bending wire very precisely to whichever angle(s) I bought them at a pawn shop many years ago.You can find some very good tools in some of those old pawn shops.Most of the pawn shops around here have stopped selling old tools,nowdays they mostly sell electronics and jewelry.(Not my kind of pawn shops) There is a guy who owns a pawn shop a few miles from me,the place is mostly wall to wall and floor to ceiling tools/tools all over the floor too.You can spend all day in there picking out good old tools/hand tools/power tools/auto tools.

What's the purpose of ham radio, To have fun talking about rigs and weather, or to be able to communicate?

To be able to communicate when no one else can communicate and to advance radio knowledge & theory?

What does part 97 say about this? Why does the ARRL ignore it?

When CW is lost, new hams will be just like CB'ers and SWL's, or some other lower life form of radio hobbiest. You name it.

For One and All,

Once again here is another one of the Legendary
Kiwa Air Core MW Loop Antenna's on eBay.

eBay Auction Item # 9720355600

http://cgi.ebay.com/_W0QQitemZ9720355600
http://cgi.ebay.com/KIWA-MW-Loop-Antenna_W0QQitemZ9720355600

The Opening Bidding is $600 with a Buy-It-Now Price of $725
Plus a Shipping and Handling Cost : To Be Determined .

Location of Seller is : Edmonton, AB, Canada

This eBay Auction Ends on : 7 de Mayo 2006 @ 16:51:40 PDT

FWIW - The Highest eBay Auction Price so far paid for a
Kiwa Air Core MW Loop Antenna has been $795 plus S&H.

NOTICE :
This is NOT my Auction and I am NOT Associated with the eBay Seller.

PLEASE NOTE :
That this Message is being Posted for Informational Purposes Only.

know your seller and something about what they are selling.
as always - buyer beware - life is a gamble and so is ebay ~ RHF

Well, being born and raised in Dayton Ohio, I am and always will be a UD
fan.
I watched a lot of games in the Arena coached by Don Donaher. He was a good
man, and his name will always command a lot of respect when it comes to
college basketball.
I liked Oliver Pernell. I wish he would have stayed. I dont have much to
say for the current coach. We lose way to many games. I dont follow them
much since he took over.

I have a friend who is an assistant coach on the UD Footbal coach, and they
still have a rock solid team.
I agree, Coach Weise is the man for The Irish.
I thought it was something when Notre Dame got Weis, he brought with him the
NE Patriots playbook. That was some move.

I think Brady Quinn will get the Heisman this year and hopfully, the Irish
are only maybe 1 year away from National Title.

The signal quality is fine, but not a barn burner in signal strength,
at least on the left coast. I generally listen to the Pearl Harbor
feeds. The bandwidth (to my ears) is wide enough that I use my 4KHZ
filter, rather than the narrower 2.4Khz filter.

My recollection is when they started to put AFN back on shortwave, it
was for the US Navy. The other services use satellites.

The 5765 frequency is an odd one to pick since it is used by WWCR.

Will the CW only portions of the lowbands be
retained, or will those go away as well?

Steve

TROLL!

CW isn't going away. It just won't be a requirement for a license.
RTTY hasn't died either.

They commonly sold used at the flea market for $250 to $300. I believe
$400 was the new price.

I've had the opportunity to try out the Quantum, Kiwa, and Wellbrook at
the same time. If space is an issue, get the Quantum. If you have a bit
of room, get the Wellbrook. You need a version with a 3ft (meter) loop
to get decent AM BCB. The kiwa is OK, but not as good as the Quantum in
my listening session. Both the Kiwa and the Quantum can be tilted as
well as rotated. I didn't find that useful, but maybe there are time
when that would come in handy. A wellbrook isn't easy to tilt.

The Wellbrook ALA-100 really works well if you set up a large loop. I'm
using 4 turns about 6ft on the side, which really eats up a corner of a
room. [It's an experimental antenna of sorts, and I'll probably settle
for a double loop for indoor use, and use the larger loop when
camping.] Some of the local AM BCB stations are so strong that my 7030
has to cut in the attenuator. Many are so strong that the preamp
doesn't turn on. Note that you need some spacing between the loops to
get any decent HF performance. About 8 inches does the job.

The regenerative controls on the Kiwa are quite useless if you have
decent filters in your radio. Given the limited bandwidth of the Kiwa,
I can't see why you wouldn't choose the Quantum instead. The Wellbrook,
not using a core but rather depending on aperture, works well above HF,
certainly up to 50Mhz. I've used it as low as 24Khz, which has a Navy
FSK signal.

Lastly, the Wellbrook doesn't need to be tuned.

I should be able to keep this from getting to me, but sometimes I just feel like responding to the attempted intimidation by these elitists.

Mate, your key is only silent from the neck, up.

Due to dyslexia, I am unable to learn much Morse Code. I can consistently recognize about half of the alphabet and none of the numbers. Morse Code might as well be edoC esroM for all the good it will ever do me.

In spite of this, I manage to be a responsible member of the ham radio community and I'm damn proud of my service to RACES, to my club as its treasurer and to the county as a volunteer communicator. My UHF/VHF points in last year's Field Day exceeded the points of our HF stations combined. Lower life form, indeed! The nerve of you!

You may get down off your high horse (or should it be "High Morse"?) and apologize for all those jabs any old time it pleases you. I'll be here.

24 May 2006

Radio Station HCJB, "the Voice of the Andes," said it will air its final English-language broadcasts on international shortwave radio from Ecuador on Saturday.
The Christian station's English Language Service, the organization said, is shifting its emphasis toward teaching English as a second language.

"English was one of the first two languages, along with Spanish, to air when the station began broadcasting in Quito on Christmas Day, 1931," it said in a statement. It quoted station Director Doug Weber calling the move a refocusing or "taking some of the resources that we've been using on the broadcasts and focusing that into English-as-a-second-language (ESL) things-programming that will go out on our other (mostly Spanish) outlets."

The statement continued:
"'We've had a very loyal audience and we're grateful to them,' Weber said of the nearly 75 years of relationship via the radio. 'And we're grateful to the Lord as well for the opportunity to be able to minister to so many people through our English-language broadcasts for so many years.'"

Here's one that I haven't even seen:

Not everyone speaks readable English, but anyone that knows Morse can copy
any language and read it at their leisure. Also, those who don't speak
English well can often spell the words well enough to read...

Just a thought.

For One and All,

IIRC the main reason that AFN Shortwave Radio Broadcasts
are in SSB by AFRTS are that they are "Audio Only" for Ships
at Sea and the Ship's AFRTS Receiver is used to Distribute
the Audio Signal throughout the Ship to be heard where it can
be heard and when it can be listened to.

3576. Re: Kiwa MW Air-Core Loop Antenna {In-the-News} FS / FA

Newsgroup: rec.radio.shortwave
Date: 2006-05-05 08:51:29 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <445B120B.10D2@mindspring.com>
Source record: 72880

The point of the Kiwa is the nulls, and the tilting is necessary to achieve that. (You get good loop nulls by building it so that it has as small a response as possible to electric fields, with electrical balancing and cancellation. Otherwise the electric field signal fills every null, being 90 degrees out of phase from the signal you're working with and can otherwise cancel exactly.)

The regeneration helps, by narrowing the bandwidth, in knocking down the adjacent channel station (also tune away from it on the radio), and I suppose, if you have a deaf radio, it can bring the signal up out of the radio's internal noise. A good radio doesn't need the latter effect.

And it's particularly nicely constructed, which is not nothing.

The fact that it's tuned means that you can't use it very well in an array with other antennas to cancel stations, because the same station has a different gain across its audio bandwidth; but by itself it's pretty good for cancelling.

In order to graduate school in the Navy we had to both read a punched
teletype tape and read morse code. I don't recall how fast the code was
but the test day was a bitch!

Mis-statements abound again.

Read the allocation chart in 47 CFR 97.305(a) and 47 CFR 97.305(c). What
CW sub-bands?

47 CFR 395(a) "An amateur station may transmit a CW emission on ANY
frequency authorized to the control operator." [EMPHASIS ADDED]

For USA Amateurs CW is authorized as stated above.

If you really believe that morse code is an important way to communicate that should be preserved then you need to convince other hams and potential hams to learn the code. You need to convince enough hams to use code so its very usage generates excitement and makes people want to join in the fun. Almost self-perpetuating like it was in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the abysmal state of things will not add one person to the ranks of key pounding hams.

So what are you going to do to increase the number of code practicing hams.

Not according to Google. It counts hits from unique IP addresses.
There is a whole industry devoted to getting high rankings on the
various search engines and that hole was plugged a long time ago to
prevent a bot form repeatedly doing the same search to move a site to
the top. If you search "Michael A. Terrell" in quotes, I am most of the
first 100 hits. Last week my website was at the top of the list, but
some of the web based forums have pushed to the top of the list.

Well, of course we all know that the term "shortwave" is already part of the google search index. We've all tried google searches and turned up pages full of hits on google, google news and google groups. And we all know many broadcasters that once used shortwave are alive and well and going about their business of broadcasting on the internet.

So, I'm not sure what you are asking google to do.

CW will not be lost in the same way that AM is not lost.
A lot of hams in the 1950's believed that SSB would cause
the death of AM and ham radio along with it. SSB operators
sounded like Micky Mouse and were known as Single Sidewinders,
undesirable snakes in the grass within the hobby, and traitors
to the traditional form of amateur radio AM communications.

The PL550 is a nice radio that will get a lot of MW, Shortwave and FM broadcast stations. I think that you would get a far better mix of features, better performance and really good audio for the same price if you switched to the DE1103 however.

As to whether the 7600 is a perfect radio that has only strengths, well I can only say that I've owned numerous radios in 20 years of swling and I've enjoyed most of them. But none of them were without shortcomings, or tradeoffs.

For me the biggest issue with the 7600 is the lack of a tuning knob. Punching a button to move up and down a band is not nearly as easy as using the tuning knob found on the DE1103 or the Sangean ATS919. And the audio out the speaker is typical somewhat muffled Sony unfortunately. I used a much earlier version of that radio, the Sony ICF2002 and enjoyed it. But button tuning was clearly an impediment to ease of use.

Separate proceeding.

Literally, they probably will. However, the restriction to A1 and F2 modes will likely be replaced by a restriction to bandwidths too narrow to support SSB. In practice, there will be little change, except that any new not-invented-yet narrowband modes will be legal by default.

Nothing. I was merely surprised that my site was the nr1 for short wave out
of nearly 100 million hits, when it's only a small hobby site.

Really? No license? The AFRTS stations I engineered at had FCC
licenses on the wall. They had no expiration date, and no fixed power
levels. They were marked "Until no longer needed", and "As deemed
necessary". As far as royalties, they are not required to pay any, by
contract with the recording and movie industries. he records and films
were labeled that they were to be destroyed when the government was
through with them.

I can't agree with this statement at all. If you know how to use the
regeneration circuits properly then you will get superb results from the
Kiwa MW Loop.

I have owned the Kiwa for many years and taken it on countless DXpeditions
and it's performance is awesome, rivalling and often beating a well laid out
1000 foot beverage antenna.

At the following link you can read exactly how the regeneration feature
operates and gives such excellent results

Michael Terrell,when I was in Vietnam in 1964,sometimes I would listen to AFRTS on my little shirt pocket transistor.(other times,I would listen to some local Vietnamese music.Those little AM radios would get soaking wet with sweat and quit working.I would go to a store and buy another cheap little shirt pocket transistor.The last one I bought over there was a little square Hitachi radio,it was a durn good little radio too) How did that station in Saigon get the news to broadcast?

There also was TV if one happened to have a TV set so as to tune in to TV stuff.I didn't have a TV set over there.Back then,one couldn't phone Stateside as easily as people can nowdays.

Not trying to squash your enthusiasm BUT, it did come at a price.
Isn't the E5 about 3 times the price of the 1103? Probably more like twice
the price when you consider you have to add shipping in on the 1103.
If it is every bit the radio that the 1103 is minus it's quirks, it must be
fantastic. I have always believed that the 1103 is as good as radios that
are 2 or 3 times the price so it sounds like you have a winner........

It was also in the 70's when digital frequency displays became practical/economical. I built the display featured in a 1977 issue of 'Popular Electronics'. It cost about $100 for the parts, including the PC boards. It seemed like a lot of money back then but it was a real luxury to have 1-Khz tuning accuracy in those days. I used that display with my Halli' S20R. The magazine article showed the display being used with the Realistic DX-160. I built a second one for a friend who had a DX-160. I still have my display and the S20R.

If you are in the US you do not need to look at any diagrams. Just get a
book that has the question and answers in it. Then memorise it. They are
the exect question and answers.
That will put you to the Tech license and the code may soon not be needed
for the low bands.

Well, "SC" a.k.a. troll,

Cw, when it came along, was frowned uopn and was predicted to be the death of ham radio as well. Did you know that?

Modes currently around that full knowledge of is NOT required to get a licence (where complete knowledge of sending and receiving all the characters in Morse is a requirement):
AM, SSB, RTTY, PSK, Paclet, Amtor, APRS, satellite...basically everything else in Amateur Radio!

I said *full* knowledge. Do any of the tests require explanations of all five (or is it ten) methods (circuit types and how they function) of generating SSB or how to generate CW...or proper operating practice in all situations?

Do you know WHY knowledge of Morse was required in the first place?

I think there should be more on the tests on operating practices. I know some Techs who can do much of the above and make better hams that any old fart crying over the supposed loss of CW. I know Extras who couldn't copy code worth a darn, nor do much in the way of tech stuff...so? They're all friends.

Your fingers and eyes (or ears) aren't broke... so why aren't you out mentoring new hams? In the last two years, how many programs have you written for helping hams with things like blind hams controlling rigs or or audio tapes on radio operation have you recorded for blind hams or trips to help a blind ham erect an antenna, do a small project or program his radio or cables you've given to a new ham for his antenna or taken a blind ham to a hamfest... Why am *I* wasting my time with this...pfffvt

I'll save you the trouble, I'm a 60 year old, 20 WPM Extra and currently spend most of my ham time on 2 & 440 from the car during drive time on repeaters (much more omitted)!

I didn't have to learn code in the Navy (though I did happen to already know it)

Jerks are everywhere and I wonder why I wasted this time. Guess I just needed a little vent...sorry folks..time for lunch.
73, Steve, K9DCI

Answers to the above questions for me: 5, 4,0,1,10,3,1 - not astounding, nor bragging, just true.
If you can't Walk the Walk, don't talk garbage.

Another milestone for shortwave. I used to listen to the HCJB 'DX
Partyline' show. It was a good source of shortwave info' but the husband
and wife hosts (Clayton and Helen Howard) were insufferably monotonous.
I remember turning down the volume when their 'Tips for real living'
came on. It seemed like a sneaky way to proselytize to a captive
audience, which of course was the real purpose of the DX show. I guess
it bugged Glenn Hauser too. He came out with his 'Tips for *rational*
living' in his DX show. :-)

We were somewhere around Barstow, on the edge of the desert, when the drugs began to take hold. I remember "Stephanie Weil" <stephanienyc@gmail.com> saying something like:

>Is this page still accurate? Has anyone in the USA ever heard these
>broadcasts and can report back on the signal quality?

I regularly listen to AFRTS from Iceland from where I am in Ireland, a thousand miles distant, on 7590 LSB. Given it's an omnidirectiona output and only listed as 10kW, I'm reasonably impressed at the quality of it most nights.

you know what,i havent fuked with cracker in a long time.but i looked on the frn the other day and see he wanted to start this up again with posting my name with some of his nasty homosexual pornographic pictures.i have no mercy for this fagget cracker.i left well enough alone and he starts the stuff up again.as far as you cant believe i would mention his dead wife,well i never thought he go as low as taking personal shots like how i got in trouble with the law ten years ago when i was young and dumb,and then posting it here like he has in other places before.so before you cry any more for this very little man, just realize he's actually pretty fuked up and he aint the angel you think he is, just get on his bad side and see how he'll treat you.as for his wife well she was probabley a very decent person who just got messed up with a nut case boyfriend.and yes kracker is gay.have a nice day and dry your eyes.and kracker,no pity for you in any way,you should'nt have started this up again fagget.

PS-Kracker go play with your hero jays schwantz,and get that cum out of your mouth fagget.

> about 10 years ago.

Well, actually shortwave as an information transmission medium began to die about 10 years ago because broadcasters realized they could reach a larger audience with better programming at a lower cost. Listeners have been turning away from shortwave radio in droves. Shortwave broadcasters are interested in getting the message out reliably to the largest potential audience and they are wedded only to the technology that gets the job done most effectively. If shortwave could fill that requirement then there is no doubt that broadcasters would continue to use that medium.

So the internet didn't kill shortwave, but shortwave is slowly dying because there is not an economical way to make it competitive with internet, satellite and cable broadcasting.

I stand by my statement. If you have decent filters in your radio, you don't need the regenerative controls of the Kiwa. Reading that article doesn't change my opinion, nor did I find the regen useful when I tested the Kiwa with a R8B.

When the Kiwa was $250 at the flea market, yeah, whatever, buy one if you like it. At the obscene prices people pay on ebay, you are better off investing that money in a better radio.

Regarding DXing with a loop, here is the LAX TIS I recorded from central Nevada
http://www.lazygranch.com/sound/lax_530_etgravel.wav
About 250 miles. As you know, TIS is flea power.

Hi Lisa, when I had a DX 160, I used a simple 75' wire. Even copper
speaker wire will work. As for the PL259, I'm not sure, but I think
other people on this group will know.

I'm sorry to hear that they will not be broadcasting in english any
longer. I used to listen to DX party line, as weel as their news of
the southern hemisphere. I must admit though, they have become a hard
catch, here in Calgary Alberta Canada. I usally go to their website,
and listen to the news there.

Yep! I stand corrected!!
5330.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5346.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5366.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5371.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.
5403.5 KHz USB ONLY, Maximum band width 2.8 KHz. 50 watts ERPd max.

And, "I dare not call it a 'band'" either. Just 5 channels occupied by
gentle men and gentle women, both genders, with manners.

I have three rigs that operate '60' meters. I've gotten to love that
non-band.

There is absolutely nothing written below that I disagree with. I've owned a KIWA loop since the minute they were available, and have always been EXTREMELY SATISFIED with its performance and noise-cancelling capabilities. The person who designed and manufactured this unit knew exactly what he was doing.

Yes, it takes an hour or two to become "expert" at utilizing all of its features and functions (I use mine with a Radio West modified FRG-7), but it is time well spent.

At the afore-mentioned $795.00 price (supposedly the highest ever paid on ebay for one), I'd say that the purchaser STILL got himself a bargain.

Just general knowledge in the history of ham radio, but a little
obscure, so let me 'splain...

To clarify, he is referring to when Morse code transmissions (using
vacuum tube oscillators that generated a continuous wave or "CW") were
displacing Morse code transmissions by spark gap transmitters (that
generated a 'damped' wave).

The guys with the thundering kilowatt rotary spark gap transmitters
thought those wimpy little 10 and 20 watt vacuum tube transmitters were
going to be the death of the hobby.

That's what I did, 10nF added to the loop- var cap setup, and now I see that RMC INfo on 216 comes in with sig 9... (without loop: about 1).

Strange thing is that with var cap + 10nF the loop only tunes between say 207 and 225 khz, while on AM (without the 10nF), it tunes 1 MHz wide ..

explanation ??
I saw that some people make their own var cap ... (with very large plates...)

Now, I intend to buy some nF caps from 1-50nF or so, to see what's happening ...

Today I picked up two old grundigs, and after some tweaking (knobs) they work !
melody boy 500 (excellent condition, the AM-FM- etc knobs aren't touched ...)
and a Yacht boy with lamp, batt indication, AFC ... tunes very well on SW...
Great sound on both radios ...

---and now, for a great song: ---
http://www.asklyrics.com/display/Church/Antenna_Lyrics/12119.htm
----
You're just an antenna, you're just a wire.
There's a thousand tongues wagging in your ears tonight,
And you turn around and you call me a liar.
Lightly babe, oh the fine lights cannot find you.
She stay out my way, it's the pulse I am aligned to.
And everything you say, you'll need that breath one day.
Well, you're just an antenna, you're just a code.
You translate like a book, the fuses all cook.
You eat humble pie and it tastes of the road.
Lightly babe, oh the fine lights cannot find you.
She say, that's the way, that's the fate I am resigned to.
And everything you say, you'll need that breath one day.
You're just an antenna, you're just a gauge.
You disturb my slumber and round up the numbers
And put them inside your velvety cage.
Lightly babe, oh the fine lights cannot find you.
She say, make my day, and the sunlight will not blind you.
Lightly babe, oh the fine lights cannot find you.
I may never pray to the fortune that's behind you.

Your variable capacitor (probably in the 20 to 400pF range) is a small
percentage of the total capacitance when the 10nF is added to it.
Alone, and at a higher frequency, it is enough to cover that much
range.

Oh what a sunny day
When they carried the radio home
Bringing him in off of the truck
And the dogs wouldn't leave us alone
Mr. Radio
Come down here to keep us company

We listen in a room
Through the miles and miles of night
Deep in the heart of the Bible Belt
In the golden radio light
Mr. Radio
Come down here to keep us company

And it's hard days out in the field
The crows in the high tree top
If the man's away from his home all day
His chickens might fall to the fox
Mr. Radio
What can you do about that uh huh

And you can take me down to a river town
Where the citizens dance till dawn
Dance so close it's a sin almost
The way they carry on
Mr. Radio
I never dreamed you could

And it's miles at the careless touch
Of a tired hand in time
When evening fell I heard a stranger sell
Dreams that were never mine
Mr. Radio
Come down here to keep us company
Come down here to keep us company

Maaaaaan... That's all there is to his criminal record? Just stupid petty shit? I knew a kid just like that in prison once. Used to come around and talk some real shit to me, until a few aquaintances and I took him, pinned him down on a pool table in the rec yard, and I started beating him with a pool cue accross his back. The cue broke in half on the last strike LOL

I'm fearing it will be Eminent Domain ham radio style.

They'll see spectrum that they don't have the ability to use, because there will be no requirement to have that ability. They will want the spectrum for phone. One good thing, there are other modes besides CW that need it, so maybe they won't take our CW portions and give it to phone only hams and appliance operators.

Thank you.

In a way, it's sort of like sign-language. Two people that don't know
each others tongue but know sign language can still communicate.

Thank you for your service to America. It is people like you that make us
a great country. When hard work was needing to be done and learned you
were there.

Today people are lazy and that's why they want to get a license in as easy
a way as possible, even if it means the service and our ability to
communicate with each other suffers.

Call the FCC, email the ARRL. Tell them you don't want to see ham radio
dumbed down anymore, for the good of the service and the good of country.

God bless America. Amen

But it's the lower qualifications that will cause the service to suffer. I
don't think new general class hams today have as much of a grasp on theory
as new ones did 15 years ago. 15 years ago, they spent more time studying
the theory while they were building their code speed up.

Loss of the requirement to be code proficient though could be offset if
the passing score on written the exams were raised to 85%

Yes, but can you send and receive Code at 13 or 20wpm?

What if in an emergency your microphone broke, and the only thing you had
to save a life was CW? With your skills, that person would die. In that
situation you'd be about as useful as two tin cans and a piece of string.

Right, that's the service nature of hams. Hams helping hams, and hams serving the community. And Dumbing it down can effect the quality of service. Maybe it won't go totally to shit while you and I are still around, but it will happen. In Life, What happens when standards are lowered, things get better?

The K7RA Solar Update

SEATTLE, WA, May 5, 2006--This was a nice, quiet week with no notable geomagnetic activity. In fact, the middle latitude K index was zero for a 36-hour period centered on April 30. At approximately the same time the high latitude college K index was zero for 51 hours straight. Average daily sunspot numbers were nearly double those of the previous seven days, rising by more than 29 points to 59.7.

As this update was being written early today, the IMF was pointing south, leaving Earth vulnerable to solar wind. The planetary A index reached five on Thursday, May 4, and it's predicted to hit 20, 30, 20 and 12 for May 5-8. Geophysical Institute Prague gives a forecast until May 11 of active geomagnetic conditions on May 5 and 6, unsettled May 7, quiet to unsettled May 8, quiet on May 9, back to unsettled on May 10, and unsettled to active on May 11.

The average daily sunspot numbers for the months April 2005 through April 2006 were 41.5, 65.4, 59.8, 68.7, 65.6, 39.2, 13, 32.2, 62.6, 26.7, 5.3, 21.3 and 55.2. Average daily solar flux for the same months was 85.9, 99.5, 93.7, 96.5, 92.4, 91.9, 76.6, 86.3, 90.8, 83.4, 76.5, 75.5 and 88.9.

Paul Peters, VE7BZ, of Cobble Hill, British Columbia, says conditions around three quiet days last week were fantastic. "On April 29, 30 and May 1, the 20 meter band conditions to Europe were almost unbelievable they were so good," he wrote. "On April 29 and 30, I called CQ once at 0300z and four hours later at 0700z I was still working down an endless pileup. Normally for us -- living this far north, 20m phone is usually dead in our evenings, but such was not the case recently. These were great nights!"

Richard Vincent, KR7R/HS0ZFQ, retired from the US Postal Service in Seattle and now lives in
Chiang Rai in extreme northern Thailand, between the borders with Laos and Myanmar
(Burma). About those same days, he writes: "I was hearing stateside signals all over the place
on 20 meter SSB starting about 1300z, which is 8:00 PM local time. From this end VR2XMT,
Charlie Ho in Hong Kong was running USA stations and so were a couple of the Russian big
guns. I had not heard conditions like that since I got on the air here last October". Richard
currently uses a dipole, and has plans to soon put up a quad.

Last week's bulletin mentioned Greg Andracke, W2BEE, of Pine Plains in upstate New York and
his experience working Chagos on 30 meters early on a Saturday morning in mid-April. Several
people wrote in to say that this was a normal time to work Chagos via the long path on that
band. Actually, that is true for many other places in North America, but not where Greg is, in the
Northeast. The people we heard from were all south and west of Greg, although checking a
propagation prediction program shows that the Southeast United States should have a good
path as well. Southern California around that time on that date would have a very good short
path opening to Chagos.

Dale Tongue, AC7NP, wrote from El Paso, Texas, to ask about where to find sunspot graphs on
the Web. The WM7D Web site has a graph of the last year of sunspots as well as all recorded
sunspot cycles back to 1749. The NOAA Space Environment Center has a graph of the current
sunspot cycle is at http://dawn.sec.noaa.gov/SolarCycle/, while the DX Listeners' Club site
compares recent cycles and offers a graph of the past few months too. Links lower on the page
provide some interesting historical data.

And finally, Thomas Giella, KN4LF, of Lakeland, Florida, has started a new e-mail listserver for
radio propagation. Subscription information is on Yahoo.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for April 27 through May 3 were 63, 68, 64, 62, 51, 58 and 52, with a mean of
59.7. The 10.7 cm flux was 100.7, 100.1, 101.2, 99.9, 93.4, 89.4, and 89, with a mean of 96.2.
Estimated planetary A indices were 5, 12, 3, 1, 2, 4 and 3, with a mean of 4.3. Estimated
mid-latitude A indices were 3, 10, 2, 0, 2, 4 and 2, with a mean of 3.3.

why? the FCC has made up its mind just waiting fro the monemnt to enact
it with the least fuss

if you wanted to make a last find the CONGRES crtiter on the telcom
comittees but you need a reason to save sw testing first
the reason your side lost is they don't have areason that stands up for
imposing the restriction\

Actually your own words have proven that you can learn it. You say you can consistently recognize about half the alphabet. So you have demonstrated your ability to learn it.

Perhaps you just haven't spent enough time on it or used a poor training method (there's way too many of those around). Most people's expectations of how long it will take are unrealistically short. For the average person, it will take 1/2 hour per day every day for 60 days.

Now writing it down could be a problem due to dyslexia but there are ways around that. You don't have to write it down. You can ask to be allowed to say the characters into a tape recorder. You could dictate the characters to a VE to write down for you. You could simply jot down notes and answer

the questions and not worry about solid copy. Again if there is a risk of writing it backwards, you could have the VE write down what you tell him/her. Naturally such accomodations have to be set up in advance.

You are painting with a very broad brush. There are many amateurs who do not jab the Technicians. These days the membership of most clubs is about half Technicians. Perhaps you need to run with a different club.

Well, if he does cover 207-225 w/ a fixed 10nF in parallel with whatever tuning cap he has, that implies Cmax/Cmin = (225/207)^2 = 1.18/1. Since Cmin is at least 10nF, the variable to accomplish that must be 1800pF, at least. That in itself is a pretty good size variable cap.

Then the implication would be that L = 50uH, and 1800pF would tune that to 530kHz. The minimum capacitance including stray and effecitve coil shunt would be 175pF to tune to 1700kHz.

I think he means to buy some fixed caps in the range 1-50nF, not a 1-50nF variable. (Though in this forum, maybe he does mean the variable!) The fixed caps could make some sense. Maybe put them on dual stackable banana plugs, and plug together whatever value is desired.

Switcher, you can do the calcs yourself: 2*pi*freq = 1/sqrt(L*C) -- or use something like the RF calculator that's in RFSim99. And you may find it's better to not try to cover too wide a range with one loop by adjusting only the capacitance, for performance reasons in addition to the fact that the tuning range will get very small as you go to larger fixed capacitances.

Cheers,
Tom

< Snip >

Your tuning cap at the low range is only part of the total capacitance
instead of the whole capacitance for the resonant circuit. I have those
duh moments too.

You could use a solid state analog mux IC to switch capacitors at
those frequencies. Maxim, Analog Devices and others make a wide
selection of these chips.

I have a Sony Earth Orbiter missing the power cord. It has 4 pins on the back panel socket and two prongs that look like they disconnect when the cord is inserted.

Can anyone provide a lead on a replacement power cord or provide a simple diagram of the connector so I can make one??

Thanks

3684. (OT) : Limbaugh -or- Kennedy - Drugs Are A Problem - Admit It ! - Deal With It !

Newsgroup: rec.radio.shortwave
Date: 2006-05-06 03:09:43 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1146884983.332174.125250@g10g2000cwb.googlegroups.com>
Source record: 72789

For One and All,

POLITICAL DOUBLE STANDARD :
* Lets see Limbaugh have a Drug {Pain Killer} Problem
and It was OK with the Conservatives
-but- The Liberals and the Media Condemned Him for It !
* Then we see Kennedy having a Drug {Rx & Alcohol} Problem
and It was OK with the Liberals and the Media
-but- The Conservatives are now Condemning Him for It !

DRUGS ADMIT IT :
The First thing for Limbaugh and Kennedy is to Admit
that Each of Them Have A Drug Problem {Addiction}

DRUGS DEAL WITH IT :
Seek Treatment and Learn to Live Day-by-Day as a
Recovered Drug Addict. Where Possible making a
Drug Addict a Criminal is not the best solution for a Society.

EXCEPT - Where the Drug Addiction has resulted in
Crimes Against People and their Property -Then-
Society Must Send-a-Message and Eliminated and
Punish the Crime Activity [.]

DRUG USE {ADDICTION} NOT AN EXCUSE :
Is Not A Valid Excuse For Criminal Acts Against People
and Their Property [.] - Criminals can go through Detox
& Recovery & Rehabilitation during their Jail and Prison Sentence [.]
Drug Use {Addiction} should not be a Get-Out-of-Jail Card
for Criminals like the Insanity Plea {Defense} has become.

Pray for Limbaugh's Recovery and Good Health - Amen

Pray for Kennedy's Recovery and Good Health - Amen

now go and enjoy listening to your radios ~ RHF

Well, with the 4 or 5 CW signals that are on most bands at any given
time (except VHF and up during contests, BTW), who would notice the
loss. No offense, but if CW ops want to keep the territory, they'd
better start populating it.

Yup, that increased the number of CW ops by a lot. Typical old style
ham response. Moron. Pure and simple moron.

This is why CW is losing the battle. Not because it's a lost art, or
something that's not worthwhile, but because the "supporters" do nothing
but complain.

I don't want to see CW go away; I think it's a "good thing", and should
stay around, especially for things it still does well, such as EME. Of
course this is not the place to speak of "advanced" things like EME,
after all, it's only been around for 50 years.

Amen! An experienced DXers with an average radio can run circles around a beginner with an expensive, hot rod receiver.

Other aspects of the entire signal chain are often overlooked or too quickly dismissed. Here's my list of criteria, in descending order of importance:

1. ionospheric propagation
2. antenna(s)
3. receiving location (RF-quiet, noisy, at the beach for sea gain enhancement, etc.)
4. the DXer's experience
5. receiver
6. luck!

Anyone else with a similar or differing list?

Which is most likely, actually. We broadcast a lot more voice than CW,
Ever noticed how many watts of television, FM radio and AM radio are
out there versus CW?

CW is effectivly dead except for those that wish to keep it alive.
Similar to the old car collectors. Nothing wrong with it. beautiful
collector items, but not really part of the current world.

A statement by one who has never owned a Kiwa MW Loop and who from his postings had only a short and cursory use of one.

> If you have decent filters in your radio, you
> don't need the regenerative controls of the Kiwa.
That's nonsense and shows your lack of experience with the Kiwa Loop. I ran it for years with my previous Drake R8B and for the last eighteen months with the Icom. The Icom has superb filters yet the regenerative feature of the Kiwa improves substantially on the Icom's filters.

If you want to brag about long distance low power transmitter DX, then the following is just a sample of the many exotic stations I receive on my Kiwa loop:
KVNS Brownsville TX
KCNZ Cedar Falls IA
both 1000 watts or less and well over 8,000 miles from my QTH.

In fact, I challenge you to find anywhere on international forums any results that come anywhere near my published results using the Kiwa MW Loop. I've never seen any Quantum or Wellbrook results that come anywhere near matching the results I get from my Kiwa Loop.

If I recall correctly, there are several North Korean frequencies
including 9335, 11335, 13650 or so. They used to be on the 11335
frequency about 1100 UTC maybe 1200 UTC. Iran discontinued their
frequencies of 9022 and 15084 some time ago and instead use frquencies
in the 31 meter band.

Of course, now I can add more turns to the loop.

The loop is 2 x 3 meter of PVC tube, bended in a circle.
There are now 3 turns. Guess ... how many turns to have the LW
153-279khz ???

picture of a previous version , large (2 m) and small 83 cm hulahoop

http://users.fulladsl.be/spb13810/oc/IMAG0015.JPG

The way I construct the hulahoop now, so that it "keeps head up":
http://users.fulladsl.be/spb13810/amloop/loopbottom.jpg
http://users.fulladsl.be/spb13810/amloop/loop83cm.jpg
http://users.fulladsl.be/spb13810/amloop/loopbottom2.jpg
(when the box is closed, you can put a radio on it, nicely positioned
inside the loop)

these formumla's say:
http://www.mindspring.com/~loop_antenna/umr_emc_calc.htm

some 15 turns... on a 2m diam loop ...

I know about the computer flat cable trick...

(I put the first formula in cm (100 cm = 1 meter) on
http://users.fulladsl.be/spb13810/amloop.htm
)

If I may add something to that...
I wouldn't like to see Morse totally disappear, but I'm against its
compulsion for trainees. I fully agree that in some conditions a Morse
tone will get through where voice is an unintelligble mush, if heard at
all, but apart from prisoners tapping out messages on pipes its days as
an *essential* comms tool are pretty much over.

We've all got to move with the times and these days Morse is on a par
with a runner carrying a message in a cleft stick. There will be some
who enjoy using it and I hope they find enough fellow enthusiasts of the
arcane art to keep themselves happy while the rest of us communicate
more naturally.

I can't keep up with all the different names that Gaukin is using. He posts one thing, then answers himself with another, but then uses the same email.

Loved the newspaper article about him playing with himself in a public library! 35 years old and exposing himself in a public library and posting stupid shit here on Usenet. What a life this moron has, huh?

All hail Kracker!

- Show quoted text -

>January 21, 2005, Lakewood, Ohio (AP) - Lakewood police today

>additional charges.

Hey isn't "Helen York" that psycho bitch from the FRN "the Librarian"??? Yeah it is. Even she couldn't tolerate Gaukin. What a sad little pathetic jack-off this moron is. In fact, I'm surprised she didn't show him how to do it right, since she's a know it all too.

Don't use the cheap ceramic capacitors that are meant to be used for bypassing. A friend of mine used some in a tuned circuit, and he got a distorted sine wave output. In addition to possibly high ESR, the value of these capacitors changes with the instantaneous applied voltage. To be safe, use caps with mica or plastic dielectric.

CW is just memorizing the sounds . That is not a skill. Yes, I do have the
20 wpm extra. Got up to speed, passed the test, never used it on the air.
I still listen to some about once a month just to see if I can still get any
of the characters.

A skill is more like repairing a piece of equipment or building something.
Maybe even the ability to put together an interisting conversation instead
of the usual WX and Signal reports.

I just did a simple check with my ohm meter and only the 2 pins at the top
are connected to the prongs on the plug.
It appears that you can ignore the bottom 2. When I say the top 2, I am
talking about the pins closest to the key.

Jim,
When the cord is connected does it cause the two upper prongs on the
male socket to break contact?? I assume this switches the power source
from internal to external source.

Is this "breaking contact" needed for AC power or just for external DC
power?

Thanks very much for the info.

> 153-279khz ???

If 3 turns resonated with about 11000 pF (your 10 nF plus about 1 nF from the tuning capacitor) produces a resonance within that band, then raising the turns to about 9 (3 times as much for about 3^2 times as much inductance) would resonate at the same frequency with about 1/9th as much capacitance (same L*C product). Of course, those extra turns will also add quite a bit of stray capacitance between turns, so you may not be able to reach the top of the band at minimum tuning capacitance.

What kind of insulation is on the wire in the big loop? Its thickness and dielectric constant have a big effect on the total stray capacitance each turn will add.

Well... All that I am sure about is... 110volts goes into the top 2 pins.
The bottom 2 pins are NOT connected to anything. I thought maybe they were
connected to each other essentially making a closed switch when connected
but this seems not to be the case...

I don't think it is as effectice on SSB. Of course, you can use the
symbols that were derived from CW (like QTH) but I think morse code is a
more direct communication in these circumstances because it doesn't
involve voice/pronunciation differences between languages. The symbols
are universal and immediately understood.

Phonetic usage (alpha bravo whiskey hotel etc) is primarily based upon
English.

I think we need to face the fact that ham radio, in general, is not as necessary or as "needed" as it was even 20 years ago.

It's a hobby. It remains a service but it is a hobby.

CW,SSB and any other mode you choose is not that much NEEDED.

CW being the simplest form, remains the form of choice when ALL infratructural resources are gone.

Memorizing a sound is no more of a skill than memorizing an answer. In any case. I can memorize sounds. I can't memorize answers. I have to know the subject to get the answer right. If people think that CW is of any importance, they will learn it whether the test requires it or not. Those who think that it will die if it is not required are just afraid that it really is useless.

What's even better is picturing the look on Gaukin's face when, ten
years from now, a potential female companion will search google for
"Michael Gaukin" and get several hits relating to indecent exposure
and public masturbation. LOL!

We had a thread on that a year or so ago here in the newsgroup. Worth
googling to get some of RHF's URL lists. One good hookup is, using the
balanced high impedance connection scheme, a single wire loop (rectangular
is fine) several feet across tacked to the nearby wall or ceiling.

It's got a high gain front end with some protection diodes, so putting
too much wire up in a urban environment may get you a lot of intermod
from Medium Wave (AM band) stations.

Went to Radio Shack & got a 6' RG-58 cable & some spade tongue connectors; cut the cable in half, stripped the cut end & attached the spade tongue connectors; screwed those in to the "A" & "GND" lugs of the antenna connectors on the DX160 & the Eavesdropper PL259 connector into the female end of the cable, and voila! : }

The manual from Sony for this radio is is Sams TSM-159, which was the last manual in the series. The switch does disconnect the internal battery. The top pins are for 120 VAC. The bottom pins are for 12 VDC operation.

Sony sold an external filter & regulator for a lot of products. I have a new one in the box here, somewhere. The Sony part number for the power connector in the radio is 1-508-623-00, and was called a power switch connector. The manual was reprinted in 1975 so you may not be able to buy this cable new.

But being able to pull up the correct characters from memory at the pace of an incoming stream is a skill.

I have an 85-year-old uncle who was a cw operator in the Pacific in WWII. He hasn't done anything with cw since 1946, and he can still copy around 10 wpm when I make him a bet.

I can go for several years without hearing cw and still step in and copy 15wpm easily.

Those of you who once passed 20 wpm tests and now find it a challenge to see if you "remember any of the characters" are simply not very bright.

Dear Jim,

If you hadn't written the "Sorry, Joe," I wouldn't have gotten involved in this discussion. In my opinion, and basing that opinion with comparisons of portable performance to (high-quality) tabletop performance, the Sony ICF-SW7600GR is definitely the finest small portable shortwave radio I have ever owned or "played with." Frankly, an "old-school" technology portable, such as the Eton E5, just doesn't interest me. I do not know why certain people do not like a synchronous detection circuit; my only thought is that they just do not know how to properly and/or when to use it. Having now used radios with good "sync" detectors for almost 10 years, I will never go back to any radio which does not incorporate it (unless someone invents something even better).

As for tuning knobs on shortwave radios, well, again in my opinion, good tuning knobs went out with Lyndon B. Johnson. Since most SW radios, and virtually all portable ones, have the ability to scan (either automatically or manually), I don't see the need for a knob, certainly the kind being produced today. They have no flywheel (and, of course, no flywheel effect), and many are not even properly knurled. And some of those new ones, with raised "dimples," are a total turn-off for me. (After a bit of use, I should think those stupid things are going to hurt the tip of your finger!) I suppose some people like to have an old-fashioned-looking knob ("retro" look?) but, as true fine-tuning is no longer necessary with digitally-tuned receivers, what purpose, other than looks and/or "cachet," does it really serve? (Yes, my Grundig Satellit 800 has a tuning knob - a "nice" one by today's standards, but a far cry from what we had in the "old days," and my AOR AR7030 Plus also has one. Believe it or not, I rarely use either knob!)

Anyway, that's my two cents. I'll leave the "old-technology" to those who desire it (and there certainly seem to be plenty of you) and I'll continue to embrace newer technology, at least when it offers a real improvement in performance, as it does with the design of the Sony ICF-SW7600GR.

And I find its sound, sensitivity, and ability to handle a significant external antenna to be just fine.

But, after all, that's why they make chocolate and vanilla!

Best,

Joe

I have a small Sony portable TV, model TV-520, that surely is from the 70s. It is black and intended to operate off a battery pack that is attached to the bottom of the set. It can operate off 120 volts AC or 12 volts DC. on the back of the set is a connector that sounds not unlike what you describe. There are four pins in a two-by-two array. The top two are for the AC power connection, and the lower two are the for the DC power connection. On the left and top of the power jack (as one views the back of the set directly) are two fingers. I figure that these servce to connect the battery's recharger when the set is running off AC so that current runs to, not from, the battery pack (as well as to the set), and to connect the two pins for DC power so that the set runs off the battery when the AC is disconnected. Since I do not have the battery pack, I cannot confirm this.

I guess copper 0.7 mm, insulation soft plastic .25 mm

a damped LC ???
Does it make sense to introduce a R in the LC circuit and use it as
antenna ??
Does it change eg the Q ??? etc ...

I have tried to put formula's here
(look if they are right !
freq_low=Math.sqrt(1/(inductance*cap_high) - (resistance * resistance)
/ (4 *inductance *inductance))/(2*Math.PI)
freq_high=Math.sqrt(1/(inductance*cap_low) - (resistance * resistance)
/ (4 *inductance *inductance))/(2*Math.PI)

OK ???
)
http://users.fulladsl.be/spb13810/amlooprlc.htm

A high R seems to lower the low freq, that's interesting ...

original formula for LC circuits: (put R = 0 in previous, and you should
get the same ....)

The lower Q makes the LC less selective. For a tuned loop, it is not a
good idea to introduce resistance.

I heard more than a hundred countries and countless utilities in the 1970's with a Halli' S20R. It was a single conversion vacuum tube receiver made in 1939! It had no selectivity positions, just *really wide*. By today's standards that radio is a dinosaur, even compared to a modern portable like the Sony-2010 or DX-398. Now I have a Drake-R8B. It's a great radio but it seldom receives anything that I couldn't have heard with the S20R, though admittedly better on the R8B in many cases. The most important factor in shortwave listening is the knowledge and skill of the operator. The receiver and antenna are a close second.

BROADCASTS IN ENGLISH - A06 EDITION

The Summer 2006 (A06) edition of Broadcasts in English is now available from the British DX Club. It was compiled by Dave Kenny and includes details of all known international broadcasts in English on shortwave and mediumwave for the A06 schedule period, as well as selected domestic English-language broadcasts on short wave. The 32-page booklet is in time order throughout and covers all target areas. Transmitter sites are given where known. It also includes a comprehensive guide to DX and Media Programmes; schedules for Digital Radio Mondiale (DRM) transmissions and World Radio Network services in English to Europe.

Copies are available at the following prices (postage included):

United Kingdom - 2 pounds sterling
Overseas - 5 Euros, 6 International Reply Coupons or 6 US Dollars

Sterling payments by cheque/postal order to "British DX Club"
Dollar or Euro payments in cash or via Paypal.

Paypal payments - please e-mail for details: bdxc@bdxc.org.uk

All orders/enquiries to:
British DX Club, 10 Hemdean Hill, Caversham, Reading RG4 7SB, UK

Or visit the BDXC-UK web site at http://www.bdxc.org.uk

Any rational evaluation of the modes available will show that there is a
combination of circumstances that make a specific mode the one that will
"get through". One can "prove" that their favorite mode is the one that
will get through under certain conditions.

I don't think hookers care, one way or the other, about your criminal record Kracker. The only way this moron is going to get laid is with his buddy Starsky or paying for it. Who knows, maybe he has to pay Starsky too!

Its hard to believe that someone, who just got arrested for public masturbation in a public library, would start a pissing match with a pirate on the internet. Aside from his criminal record, this guy has to jerk off in a library too? I'm telling you this Helen York is the "the Librarian" and now it all makes sense. She really is the Librarian

I agree with this your list in its order, however, in place of luck I'd
put "Perserverence." You can make your own luck if you keep listening
regardless of your equipment. Conditions are constantly changing.

Sounds like ordinary PVC insulated hook up wire. The PVC is a little lossy, but not too bad at this low frequency. You would have a lot more trouble with high capacitance if you were using enameled (magnet) wire. My favorite for such things is Teflon or Tefzel insulated wire (low loss and low dielectric constant), but it is expensive and hard to find. Another good, but hard to find insulation is polyethylene. It is sometimes used in low capacitance, data grade cables, but stripping out enough for this project would be a career.

Do you think it is practical to pull 6 more turns through your pipe?

3799. balun and image

Newsgroup: rec.radio.shortwave
Date: 2006-05-06 22:54:16 UTC
From: Charly <no.spam@no.email>
Message-ID: <445d2780$0$26819$636a55ce@news.free.fr>
Source record: 73004

Dear all,

I just noticed tonight that, while listening what seemed to be Bucurest radio on 5900 kHz between 2100 and 2200 UTC, I had a strong image of Vatican Radio. This Vatican radio transmition was on 5885 kHz, much stronger (closer, I'm in Paris surburbs, France) than Bucarest. I disconnected my external antenna with balun, and Vatican radio image disapeared from 5900 freq just listening off the whip. Then I tried the antenna without the balun : the signal improvement is less than with the balun, but at least I don't have the image...

The balun is home made, with a ferrite core than comes in two clippable parts (used to reduce noise on wires) : so it is not a perfect balun for sure, but it gives good results anyway for me...

I had the same thing occuring with my Sangean 909 and Sony SW100.

Can anyone explain that image phenomena to the humble radio beginner that I am ? :-)

Thanks in advance !!!

Charly

That's interesting - I heard that the 7600Grs sync detc injects some noise and that it doesn't lock onto weak signals very well. As with all filters, the audio quality suffers, even cheap/bad PLL circuitry injects some noise. The S350 is s typical example, where the narrow / wide and low-pass filters have little effect and only muffle the audio. I tried the S350 and it was the cheapist piece of crap radio, so for AM DXing I just bought a $25 PLL RS radio that performs, as well as, the S350. Too many radios are over-hyped - hell, my car radio received everything the S350 could. The CCradio and SRII are over-hyped, as well...

I have seen PACTOR II get through from Europe with 10 watts
when there was no humanly detectable signal. All I did was
choose the correct frequency and time based on a schedule.
I detected absolutely no carrier on the S-meter or with
my ears in CW mode. The PACTOR II signal was literally
down in the noise but my SCS PTC-IIe somehow managed
to dig it out.

You would have to do some math to show you have an image. That is, an image is very predictable if you know the IFs used in the radio.

Maybe your front end is overloaded, and going to the whip provides less signal.

Generally if your radio input is a whip, the radio has a huge amount of gain at the input to make up for the weak signal provided by the short whip. Some radios have a switch that you set for either a whip, long wire, or 50 ohm feed, adjusting impedance and gain accordingly.

Frank takes on the Illegal Alien marches of last week, asking, if it was practical to send Elian Gonzalez home, or sent troops to attack the Bonus protestors of WWI, why is it not practical to send the illegals home? Simple: they were organized by Marxists to spit in the face of America.

Frank also concludes that blacks, as a political power in American politcs, are now irrelevant. As proven in the last political elelction, the black vote proved to be nil. And as the illegals flood in, the blacks will become less and less relevant to the political issues. They followed hate mongers like Jessie Jackson and Al Sharpton like lemmings off a cliff. Even some blacks are actually saying this and are realizing this.

Also, archeological evidence shows Whites were in North America first on "Berengians on the Move"... Sean Hannity joins the ever-growing list of talk radio hosts who have ripped Frank off... Kennedys and motorized vehicles don't mix... media contempt for the public it servers... how globalization turns countries into slums... your phone calls at 718-761-9996 and much more.

Scott,

Guy {Guide} Wires for a "Receive Only" - Shortwave Listening (SWL)
Antenna :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9398

Bare or Insulated Metal Guy {Guide} Wires are OK when
you are using a Plastic or Ceramic Insulator between
the end of the Guy Wire and the end of the Wire Antenna
Element. If an Insulator can not be use then a 3-5 Foot
piece of Nylon-Poly Rope can be use as an Insulator
between the Guy and Antenna Wires.

ClothesLine Wire - Which is often described as Vinyl
Coated Steel Core Wire can be used as Guy Wires when
using #10 or #12 AWG Solid Copper Wire or #12 or #14
Copper-Clad Steel Core Antenna Wire.

T I P S :
1 - Make sure that your Antenna Wire is as Strong and
preferably Stronger then your Guy Wires.
2 - Often an Insulated #14 AWG Stranded Copper Wire
that is used as a Wire Antenna Element will break
first when it is used with a Steel Wire of the same size.
3 - Make sure that the 'suspended' Guy Wires between
the Antenna Support Points do not weigh more then
your Wire Antenna Element.
4 - The Guy Wires should not be the major Load Factor
of your Antenna
5 - The Guy Wires are there to Support the Antenna and
not to help bring down the Antenna.
6. Double-Over the Wire at the Insulator and run a
Double Wire through the Eye (Hole) of the Insulator.
Then do a Double Wire CW-Wrap on the Root Wire
followed by a CCW-Wrap by the Tag-end Wire.
- - - Note this also works well at the Tie-Off Points
of the Guy Wires at ground level or on the structure.

Hi,

I would like to use vinly coated braided steel cable
to tie off my random wire antenna. I'm just able to
toss my baseball over the top branches of my 2 tie off
trees now-in a few years I will certainly drop as many
feet from my throws so want as close to a permanent tie
as possible.

Using ceramic eggs will insulate the antenna from
conduction of tree/cable charges.

Still I rarely hear of cables used instead of rope
-am I missing something?

We were somewhere around Barstow, on the edge of the desert, when the
drugs began to take hold. I remember Dave Holford <holford@sympatico.ca>
saying something like:

>> I regularly listen to AFRTS from Iceland from where I am in Ireland, a
>> thousand miles distant, on 7590 LSB. Given it's an omnidirectiona output
>> and only listed as 10kW, I'm reasonably impressed at the quality of it
>> most nights.

>I'm listening to it as I write and I show 7590 USB with nothing on the LSB.
>I'm not sure, but ISTR that sometimes they have been known to put different
>programs on different sidebands?

Odd. I definitely get it on LSB. Some days there's a pretty weak USB
component but LSB is the consistently stronger of the two.

WM,

GE Superadios - Not ! - But Sometimes . . .
The NUMB3RS Can Not Be Ignored [.]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9399

This Is Why {IMHO} - There are more good AM/MW DX 'catches'
Heard with GE Superadios then all other Radios combined.

1 - The Total Number of GE Superadios being used for everyday
and all night {late night} AM/MW Radio Listening.

2 - The Total Number of Daily and Weekly Hours that
the User's of GE Superadios are :
listening, Listening. LISTENING ! to their Radios.

3 - The Numbers Add-Up and Multiply - IF It Is Out-There -
The-Chances-Are someone with a GE Superadio is searching
for it (what ever it is) or will happen on it and one of them will
"Hear It" on a GE Superadio.

sometimes quantity does trump quality - iane ~ RHF

Sorry I drug you into this Joe but I couldn't help but think of you when I agreed with his assessment of the 7600GR. I have nothing against and in fact RELISH a good synch detector. I just don't think the synch detector in the 7600GR is up to snuff. Of the radios I have with a synch, I would rate them in order from xlnt to bad in this order:
Sat800
SW-100s
SW-2010
SW-77
SW7600G
R-75 (modified)
My 7600 squeals and easily loses lock on an unstable signal. Maybe mine is defective. I don't have 5 or 6 of them to compare, only the one. It has also always perplexed me how you could berate (maybe not the right choice of words) a radio that you have never owned.

But, as they say...
Everyone's entitled to their opinion and I have always respected yours, even when you're wrong ;)
Now break out the peace pipe!

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote in message news:1146942985.966762.259940@v46g2000cwv.googlegroups.com...

So I hear you're exploring your options, involving a lawyer, and
considering litigation because someone posted a link on an obscure web
site to an animated GIF with a tag line saying you're involved in
sadomasochistic homosexual activity with Starsky? LOL! You shit bag,
go get your fucking lawyer. There's this thing called "discovery" that
you probably aren't aware of, since you're obviously intellectually
challenged (i.e. stupid). Fuck you! Bring on your lawyers. They'll
fuckin' laugh their ass off in the back room as sure as they'll take
what little money you have after your 12 hour shift assembling tacos
at Taco Bell. Oh, and your father who shares your name, Michael
Gaukin? He's a poor, unfortunate turd who is undoubtedly embarrassed
for bringing you into this world. By the time you realize what an
asshole you were to bring up Kracker's wife, he'll be wishing that you
were a cum stain on the pool table in the bar where you were conceived
instead of the waste of flesh you became.

I believe that North Korea is on 9335 at 1500 UTC or so. Iran is on at 0130 UTC on 7235 (or was that 7325? I lost my notes, going from memory). I've never heard either, but Iran is supposedly more entertaining than North Korea. North Korea apparently has lots of mind numbing old fashioned Stalinist fare. Iran is more firey, with lots of angry denunciations of the US. Iran is extremely hard to pick up west of the Rockies. I live in CA and the best I've been able to get is a low murmur just below the noise floor. North Korea is easy to get on the west coast since I believe that it mostly travels a darkness path at that time.

Iran is currently broadcasting to N.A. on 7235 and 9495 from 1:30 to
2:30 UTC. They're usually easier to receive in the summer months, here
in Tx. anyways. And there's always the netcast at:
http://www.irib.ir/worldservice/englishRADIO/default.htm

This "can" work but at 2.4 GHz presents significant construction
problems due to the frequency of operation. This is basically a horn
antenna with a 1/4 antenna element. All dimensions are critical to
operation and there is not much room for inaccuracy.

Generally you don't want to extent your range as you just make yourself
more open to be hacked. You do not want your signal to extend beyond
your property lines where someone can access your network say from a car
parked out in front of your house or from a neighbors house.

It depends on what you want. Maybe the bandwidth is to narrow or the
tuning action is so sharp it is hard to peak it. You add resistance and
the peak does go down but the bandwidth also widens.

Yes, either it's an image or the radio front end is just overloaded
because if the BALUN is working right you will have stronger signals at
the radio input. If the radio has a sensitivity switch moving it to
local will do the same thing as removing the BALUN or just using the
whip on the radio.

For One and All,
.
ABOUT - American Forces Network (or AFN) and
American Forces Radio and Television Service (AFRTS)
Shortwave (SW) Broadcasting
.
WIKIPEDIA - American Forces Network (AFN)
http://en.wikipedia.org/wiki/American_Forces_Network
http://en.wikipedia.org/wiki/Armed_Forces_Radio_Network
.
* American Forces Network (or AFN) is the Brand Name
used by the United States Armed Forces Radio and
Television Service (AFRTS) for its networks worldwide.
.
* AFN and Shortwave Radio Broadcasting - AFRTS has
shifted its emphasis to relaying its Broadcasts by Satellite.
However, there are still a number of Single SideBand (SSB)
Shortwave Radio Relay Sites around the World to provide
service to Ships at Sea including : Diego Garcia, Guam,
Sigonella, Italy; Puerto Rico; Hawaii; and others . . .
.
AFRTS (AFN) 'only' lists USB as their
Mode of Shortwave Transmission ~ RHF
.
Note [AFRTS] American Forces Radio and Television Service
formerly called "Armed Forces" vice 'American Forces'
.
American Forces Radio and Television Service (AFRTS)
AFRTS => http://www.afrts.osd.mil/default.htm
.
See "My AFN" American Forces Network
http://myafn.dodmedia.osd.mil/
.
Current AFN / AFRTS Shortwave High Frequencies
MyAFN => http://myafn.dodmedia.osd.mil/radio/shortwave/
.
Current AFN / AFRTS Shortwave Program Schedules
http://myafn.dodmedia.osd.mil/radio/afn/schedule.asp
.
FWIW - The ARMED FORCES RADIO NETWORK
name is now bing used by a 501(c)3 organization.
http://www.armedforcesradionetwork.org/index2.html
.

.
and now you know ~ RHF
.

3834. Liberty Net Has Been Sighted on 3942 Khz LSB

Newsgroup: rec.radio.shortwave
Date: 2006-05-07 03:43:32 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns97BBF15A98EF5TheDoctorisin@216.196.97.142>
Source record: 73039

Ahoy,

The Liberty Net is available on 3942 Khz LSB

With the usual Heterodyne in the background generated by men without penises.

Freedom of Speech is quite frightening to Children! Please raise your hand if you feel that Freedom of Speech is about pornography. Can you imagine that, the Founders of the Country wrote an Amendment to assure the future of profligate pornographers. They truly were men born before their time.

Oh, there is another possible explanation. The Founders actually sought to assure that American's would be able to speak their minds (ahem, like the Liberty Net) without fear of repercussions.

Little did they know that men without penises would some day own Amateur Radios, and sit like giggling little children, attempting to jam the free expression of thought that they find so frightening.

America, you gotta love it. Truly a godless people with diminutive minds.

Dr. Artaud

David,

Consider the Read Profile of someone who Reads and Posts
to Rec.Radio.Shortwave - They are NOT your average Radio Listener.

Next consider the Listening Profile of someone who Buys a
GE Superadio to Listen to the Radio Every Day and All Night
and again - They are NOT your average Radio Listener.

Then consider the Listening Profile of someone who simply
owns a Car / Truck and Listens to the Radio in it while they
are in it Driving down the Road of Life - Now "They" ARE
your very average casual Radio Listener with :
* One-Eye-on-the-Road
* One-Ear-on-the-Radio
* One-Hand-on-the-Steering- Wheel
* Half a Brain Focused on Traffic
And with the other half of everything just plain doing
something else as they Cruise-Down-the-Road-of-Life !

well that is how i see it ~ RHF

Older model car radios are the best,or among the best,for DXing.

Dee, please go back and re-read Silent Key's original post and my response.
I was reacting ONLY to that one person's remarks. I was actually
narrow-brushing.

While I'm an officer in just one club, I am in three and none of them have
any crummy people -- and I certainly agree with you that many amateurs don't
jab the techs. In fact, I encounter practically total acceptance. That's
why Silent Key stood out.

With regard to can/can't learn, I have the most problems with the characters
that are four or more elements long. dit-dah-dah-dit and dah-dit-dit-dah
are different, but I can't tell you what they are. I think one of them is

"P" because I remember the symmetry.

Transcribing is not the problem. If I hear dit-dah, I can write A. But if I hear dit-dah-dah-dah-dah or dah-dit-dit-dit-dit, I don't know what to write, because I don't know what those are. I cannot store the memory of what those sounds mean. Since you (apparently) don't have the problem, you won't relate.

And it isn't a lack of time or effort. I have been at this since 1993. Many methods. No appreciable successes. (I did get "D" from "dog-did-it" and "Q" from "pay-day-to-day" -- a couple of real triumphs, eh? [sarcasm intended])

This is no picnic. Thanks for understanding.

73,
"Sal"

Source record: 73060

This week's subject is the Boeremag, or Boer Force, and the recent disapearance of two of its members while undergoing an extensive trial. It is very likely that Rudi Gouws and Herman van Rooyen may have fallen victim to foul play, a well-worn tactic of the notorious South African Police thugs, proven in court to be criminals, one Captain Vice and one Tollie Vreugdenburg (pronounced Freekdenburgh). These two police officers have previously been involved in attacks and assaults on, and abuse of, family members and witnesses of the Boeremag accused, and are proven intimidators. Notwithstanding the proof against them, the presiding judges, presumably under instruction of the ANC authorities, have allowed their continued appearance in court in authoritarian positions. Notwithstanding formal charges having been filed against them, the SA Police refuse to act against these criminals, and they remain at large, able to terrorize the pubic at will. Vice, especially, is reported to have previously been involved in kidnapping activities and torture. Wilhelm Pretorius, a Christian minister, for one, was beaten up so bad by Vice and friends, that after his arrest, newspapers published his brother's photo because Wilhelm's face was unrecognizable.

Vreugdenburg was reported by witnesses to regularly coach state witnesses on what to say before the court. Witnesses who witness for the accused the first day suddenly change their tune the second day, and suddenly witness against the accused after having been visited by Vreugdenburg & friends. This happens time and again.

Numerous cases of deliberate malicious attempts by police and prison guards to seriously injure the "Boeremag" trial accused have been reported to Judge Jordaan and his two deputies. The state has proven its unwillingness to act. Justice has NOT been done in this case EVER.

I guess that you have never used a real, old fashioned outhouse that
was built before you could buy screening. The hole in the door was there
to let the methane gas out. If it was closed tight enough to keep flies
out you would suffocate while using the outhouse. BTW, some really did
have a half moon cutout in the door.

There are receivers that pick up multiple frequencies and feed them to
the same speaker, but you'll likely never see one. (Or you should hope
that you never see one!) ;-)

That is correct. Let's just take a very simple example. PSK is one of our
newest digital modes. When there are auroral disturbances, PSK cannot be
used. The phase shifts induced by the auroral activity make it impossible
for the computer to read. These phase shifts effect all the modes. Modes
that depend on phase shifts (such as PSK) are affected the most severely and
quickly become unusable. On the other hand, CW takes on a buzzy, raspy
sound but a human operator can still decipher it although a computer will
fail. I have personally experienced these conditions. If the auroral
induced phase shifts aren't too severe even SSB will get through when PSK
has failed. I have also personally experienced this.
```

Let's take another. This time packet. Packet has nearly died out on HF because it is not robust enough. Conditions have to be almost perfect for there to be a usable packet signal. Even low levels of atmospheric static make it unusable. Slight fading also causes problems. Yet voice, CW, PSK, and RTTY will all cope with conditions that can make unusable.

Each mode has its strengths and weaknesses. For each mode, there are conditions for which it will be the best choice and conditions for which it will be the worst choice. If a person wants to maximize their communication capabilities, they need to become conversant with each mode, its characteristics, and what affects its propagation. For CW, this should include learning to copy by ear. Under some conditions, the human brain is the only computer powerful enough to decipher it.

If you were in this area, I would be more than happy to take a try at teaching you. The "dog-did-it" approach is one of the worst possible ones to use. It is like trying to count the dots and dashes. On longer letters it can be a problem.

For someone like yourself, it is absolutely essential that you eliminate any and all extra translation steps. The burst of sound should register directly as a letter. In other words, hear it as a letter and reflexively write a letter. Then it doesn't matter if you happen to know the actual number of dots and dashes. No counting, no "dog did it", no "helpful" memory devices at all. They will only hinder someone like yourself.

> This is no picnic. Thanks for understanding.
>

Well I just wish that I could take a stab at teaching you. There is always a sense of accomplishment in expanding your abilities in ham radio. For example, in the past couple of years, I've been exploring the digital modes and VHF/UHF propagation. It's a hoot to work Texas on 2m from here in Michigan.

Are you nuts? I know a guy in Santa Barbara whose LAN goes over 2
miles from his office to a transmitter site in the hills. This
happens more often than you may think. There is a security feature on
your wireless router. About half of my neighbors don't bother to turn
theirs on, but that's just another fun thing to do when bored...

For a line of radios that have always had quality control problems,
I'de give you $5 too...

Also, like the CCradio and Grundig S350 crap, its sensitivity is way
overvlown !

Looks like RS is getting rid of all their Chinese-made Grundig junk -
smart move, especially, when there isn't much of interest on SW
anymore...

My two ears multi-task -- hearing the nightly TV news, with 80 meter
chatter in the bg, monitoring 2 meter traffic, the computer streaming
Air America, the weather radio on alert; all happening simultaneously.

The SRII has sensitivity and selectivity (especially when properly aligned)
far superior to the CCradio and above all but the high end Grundig radios
(even when they were still made in Germany). For an AM/FM radio, it's
pretty close to the top of the heap.

Rickets, you wouldn't know reality even if it used a machete to cut a path through the dingleberry's and decided to spend the winter up your ass.

I have one or two old beat up radios here that can tune in to two tv
stations.
Gee whiz folks,lighten up.y'all know I dont really mean any disrespect
for any radios.

Yep, it's an amazing performer. I've got mine sitting on a Lazy Susan, which
makes it easy to move about.

Dear Jim,

You are absolutely correct in your assessment of synchronous detection circuits (and the sync circuit on my Sony '7600 units exhibit the same characteristics as yours - yours is probably NOT defective), though I should put that of the AOR AR7030 Plus at the "top of the heap," far ahead of Drake's circuit on the Satellit 800 (as well as on the Drake R8B and SW8).

Though Sony's sync circuit on the ICF-SW7600GR (and 'G) is one of the weakest in performance, it still generally works well and it's FAR better to have it than not to have it! If it annoys the user on a particular signal (it doesn't annoy me very often), it can always be turned off.

And there is NO other small portable shortwave receiver which incorporates a sync circuit.

Also, please remember - I'm NEVER wrong. I'm PERFECT. Just ask me - I'll tell you*. ;-)

Best,

Joe

*But for heaven's sake, don't ask my wife!

"Jim Hackett" <h-a-c-k-m-...@pcpeople.com> wrote in message:

Sorry I drug you into this Joe but I couldn't help but think of you when I
agreed with his assessment of the 7600GR. I have nothing against and in
fact RELISH a good synch detector. I just don't think the synch detector in
the 7600GR is up to snuff. Of the radios I have with a synch, I would rate
them in order from xlnt to bad in this order:
Sat800
SW-100s
SW-2010
SW-77
SW7600G
R-75 (modified)
My 7600 squeals and easily loses lock on an unstable signal. Maybe mine is
defective. I don't have 5 or 6 of them to compare, only the one. It

has
